Educational Rankings Annual 2002

Dictionary Catalog of Official Publications of the State of New York

This book reviews a draft report from the federal government that assesses the effects of oxygenated gasoline on public health, air quality, fuel economy, engine performance, and water quality. In addition to evaluating the scientific basis of the report, the book identifies research needed to better understand the impacts of oxygenated fuels. Methyl tertiary-butyl ether (MTBE), which is intended to reduce carbon monoxide pollution during winter, is the most commonly used additive in the federal oxygenated fuels program. MTBE has been implicated in complaints by the public of headaches, coughs, and nausea. Other questions have been raised about reduced fuel economy and engine performance and pollution of ground water due to the use of MTBE in gasoline. The book provides conclusions and recommendations about each major topic addressed in the government's report.

new edition of volume 2 of The Cambridge Bibliography of English Literature. The design of the original work has established itself so firmly as a workable solution to the immense problems of analysis, articulation and coordination that it has been retained in all its essentials for the new edition. The task of the new contributors has been to revise and integrate the lists of 1940 and 1957, to add materials of the following decade, to correct and refine the bibliographical details already available, and to re-shape the whole according to a new series of conventions devised to give greater clarity and consistency to the entries.

Report for

Government Reports Announcements & Index

Detailed, scholarly study examines the ideas that developed between 1750 and 1900 regarding the existence of intelligent extraterrestrial life, including those of Kant, Herschel, Voltaire, Lowell, many others. 16 illustrations.

Drawing the Map of Life is the dramatic story of the Human Genome Project from its origins, through the race to order the 3 billion subunits of DNA, to the surprises emerging as scientists seek to exploit the molecule of heredity. It's the first account to deal in depth with the intellectual roots of the project, the motivations that drove it, and the hype that often masked genuine triumphs. Distinguished science journalist Victor McElheny offers vivid, insightful profiles of key people, such as David Botstein, Eric Lander, Francis Collins, James Watson, Michael Hunkapiller, and Craig Venter. McElheny also shows that the Human Genome Project is a striking example of how new techniques (such as restriction enzymes and sequencing methods) often arrive first, shaping the questions scientists then ask. Drawing on years of original interviews and reporting in the inner circles of biological science, Drawing the Map of Life is the definitive, up-to-date story of today's greatest scientific quest. No one who wishes to understand genome mapping and how it is transforming our lives can afford to miss this book.

subjects in experiments designed to test the effects of radiation and disease on the human body emerged at the turn of the twentieth century, when the rise of the modern, coercive state and the professionalization of medical science converged. *Useful Bodies* explores the intersection of government power and medical knowledge in revealing studies of human experimentation—germ warfare and jaundice tests in Great Britain; radiation, malaria, and hepatitis experiments in the U.S.; and nuclear fallout trials in Australia. These examples of medical abuse illustrate the extent to which living human bodies have been "useful" to democratic states and emphasize the need for intense scrutiny and regulation to prevent future violations. Contributors: Brian Balmer, University College London; Miriam Boleyn-Fitzgerald, University of Wisconsin; Rodney A. Hayward, University of Michigan; Joel D. Howell, University of Michigan; Margaret Humphreys, Duke University; David S. Jones, Massachusetts General Hospital; Robert L. American Bookseller

This book constitutes the refereed proceedings of the First International Workshop on Data Integration in the Life Sciences, DILS 2004, held in Leipzig, Germany, in March 2004. The 13 revised full papers and 2 revised short papers presented were carefully reviewed and selected from many submissions. The papers are organized in topical sections on scientific and clinical workflows, ontologies and taxonomies, indexing and clustering, integration tools and systems, and integration techniques.

elusive journal pages containing instructions to authors. This unique book contains all the information you need to know: whether the journal will consider your manuscript; the journal's submission address; how to construct the abstract, illustrations, tables, and references; and specific information on copyright, multiple authorship, statistical analyses, and page charges. The Author's Handbook of Styles for Life Science Journals gives all this information for 440 of the most important English-language, life science journals. Titles were selected from the "Journal Rankings by Times Cited" list in the Science Citation Index Journal Citation Report. Because this report is heavily weighted toward the medical sciences, other life science journals are incorporated into the book based on general level of prestige and reputation. In addition, some new titles that promise to be important to their fields, like Nature Medicine and Emerging Infectious Diseases are also included. Organized by journal title, the handbook's entries are uniformly arranged to allow direct comparison between journals. Information is presented in an easy-to-use, easy-to-read format with clear and explicitly stated instructions. The Author's Handbook of Styles for Life Science Journals gives authors in the life sciences all the information necessary for the correct and complete compilation of a manuscript for submission to their journal of choice.

Politics and the Life Sciences

History and Philosophy of the Life Sciences

"Until recently, the threat of biological weapons (BW) has received little international attention compared with other weapons of mass destruction (WMD). Concern about nuclear weapons (NW), and more recently about chemical weapons (CW) has dominated efforts in non-proliferation research and policy-making. Arguably, the great moral abhorrence attached to BW has tended to narrow what public discussion has occurred on this sensitive topic. Today, the threat of BW is real and yet there is no means of knowing whether a country is in breach of the international ban on these horrific weapons. This paper is premised on a determination to give the problem of BW proliferation the attention it deserves. A mere description of the threat of BW will not suffice. This work sets out to investigate an important means by which the threat to global security posed by BW could be substantially reduced: the conclusion of a workable verification Protocol to strengthen the Biological Weapons Convention (BWC)"--ACDIS website.
