"The care of older adults suffering with pain is a difficult task that calls for understanding as well as compassion. Dr. Quinlan-Colwell has written an excellent book that deals with every facet of the problems that are encountered by caregivers.[This book] provides the reader with valuable knowledge that will diminish suffering and enrich the lives of people confronting new, often frightening, problems." From the Foreword by Ronald Melzack, PhD, FRSC Professor Emeritus McGill University "This is a well-written and concise book.Nurses and other healthcare professionals will certainly find this book a useful resource for understanding and managing geriatric pain."--Clinical Nurse Specialist Older adults can be especially susceptible to the debilitating effects of chronic pain, yet there are often barriers to successfully alleviating pain on the part of elderly patients and the health care professionals who treat them. This comprehensive guide to geriatric pain management provides the most current information available on assessment and treatment of pain in older adults. In a concise, reader-friendly format, the book provides techniques, tips, and tools for assessing pain and examines barriers to appropriate treatment. It addresses the physiological and psychosocial factors underlying the process and occurrence of pain and helps nurses to develop a comprehensive multimodal approach to pain management that includes pharmacological and nonpharmacological interventions. The guide provides detailed coverage of medications commonly used for pain management,

including all contraindications and side effects, so that nurses will be able to evaluate the best use of a medication in the context of comorbidities and sensitivities of each individual. Also addressed are chronic illnesses common to the elderly population, palliative and hospice care, treatment of concurrent depression and anxiety, treatment of cognitively impaired elderly, and techniques for assessment and intervention in cases of substance abuse. Key Features: Provides concise yet comprehensive information on assessment and treatment of geriatric pain Includes detailed coverage of a great variety of pain medications, including contraindications and side effects Explores barriers to appropriate treatment Covers chronic diseases of the elderly, palliative and hospice care, depression and anxiety, substance abuse, and treatment of cognitively impaired elderly Written by a highly respected practitioner and educator in geriatric pain management Includes case studies, handy tables, questions for reflection, and references for additional study

This book deals with boundary value problems for analytic functions with applications to singular integral equations. New and simpler proofs of certain classical results such as the Plemelj formula, the Privalov theorem and the Poincaré-Bertrand formula are given. Nearly one third of this book contains the author's original works, most of which have not been published in English before

and, hence, were previously unknown to most readers in the world. It consists of 7 chapters together with an appendix: Chapter I describes the basic knowledge on Cauchy-type integrals and Cauchy principal value integrals; Chapters II and III study, respectively, fundamental boundary value problems and their applications to singular integral equations for closed contours; Chapters IV and V discuss the same problems for curves with nodes (including open arcs); Chapter VI deals with similar problems for systems of functions; Chapter VII is concerned with some miscellaneous problems and the Appendix contains some basic results on Fredholm integral equations. In most sections, there are carefully selected sets of exercises, some of which supplement the text of the sections; answers/hints are also given for some of these exercises. For graduate students or seniors, all the 7 chapters can be used for a full year course, while the first 3 chapters may be used for a one-semester course.

The Theory and Practice of Revenue Management is a book that comprehensively covers theory and practice of the entire field, including both quantity and price-based RM, as well as significant coverage of supporting topics such as forecasting and economics. The authors believe such a comprehensive approach is necessary to fully understand the subject. A central objective of the book is to unify the various forms of RM and to link them closely to each other and to the supporting fields of statistics and economics. Nevertheless, the topics and coverage do reflect choices about what is important to understand RM. Hence, the book's purpose is to provide a comprehensive, accessible synthesis of the state of the art in Revenue Management.

Currently there is growing interest in the application of dynamical methods to the study of cognition. Computation, Dynamics, and Cognition investigates this convergence from a theoretical and philosophical perspective, generating a provocative new view of the aims and methods of cognitive science. Advancing the dynamical approach as the methodological frame best equipped to guide inquiry in the field's two main research programs--the symbolic and connectionist approaches--Marco Giunti engages a host of questions crucial not only to the science of cognition, but also to computation theory, dynamical systems theory,

philosophy of mind, and philosophy of science. In chapter one Giunti employs a dynamical viewpoint to explore foundational issues in computation theory. Using the concept of Turing computability, he precisely and originally defines the nature of a computational system, sharpening our understanding of computation theory and its applications. In chapter two he generalizes his definition of a computational system, arguing that the concept of Turing computability itself is relative to the kind of support on which Turing machine operate. Chapter three completes the book's conceptual foundation, discussing a form of scientific explanation for real dynamical systems that Giunti calls "Galilean explanation." The book's fourth and final chapter develops the methodological thesis that all cognitive systems are dynamical systems. On Giunti's view, a dynamical approach is likely to benefit even those scientific explanations of cognition which are based on symbolic models. Giunti concludes by proposing a new modeling practice for cognitive science, one based on "Galilean models" of cognitive systems. Innovative, lucidly-written, and broad-ranging in its analysis, *Computation, Dynamics, and Cognition* will interest philosophers of science and mind, as well as cognitive scientists, computer scientists, and theorists of dynamical systems. This book elaborates a comprehensive picture of the application of dynamical methods to the study of cognition. Giunti argues that both computational systems and connectionist networks are special types of dynamical systems. He shows how this dynamical approach can be applied to problems of cognition, information processing, consciousness, meaning, and the relation between body and mind.
