MongoDB Administrator's Guide

With a bias toward action, this Field Guide will provide hope, inspiration, and a way to put leadership into practice. While you can read from beginning to end, the format makes it easy to pick and choose the most urgently needed tools. The world and workplace do not wait for leaders to be properly assessed, trained, and "developed." Instead, people end up getting promoted because someone else left. People take the chair of a committee because it's "their turn." And we've all seen people promoted to leadership because they were good at their job, even though that job may require a totally different skill set. As we continue to explore and develop leaders, we can all turn to this definition when we're overwhelmed: Meet Needs. This requires curiosity - a leader has to ask "What's needed?" then act on it. It could be "What does she need from me?" "What does this team need right now?" "What does he need to hear to do his best work?" Consider a bias toward action. The world moves when we do. Lack of initiative doesn't result in lack of change, it results in decay. It all comes down to "what's needed now." Leadership is the act of meeting needs. This book will help you do just that.

Then he said he had never talked to an actress, and he had heard they were a fussy lot. She would probably want him to change the play; as he would not do that, there was no use seeing the woman. Bambi informed him that if Miss Harper would get the play produced, it would pay Jarvis to do exactly what she wanted done. Then he protested he hated New York. He didn't want to go back there. In this IBM® Redbooks® publication, we discuss and describe the capabilities for embedding Informix® into applications and software. We introduce the technological architecture and describe several of the functions and features that support Informix as a robust and powerful embeddable DBMS. Many of these features are unique in the industry today, enabling clients to create a business advantage. The Informix database server can support the requirements of an embeddable DBMS, and is doing so for many companies today. The low administration requirements of the Informix database server enable clients to deploy thousands of Informix instances, embedded in applications in locations where there are no technical resources to support the database. The real requirement is for applications with embedded databases that require little or no administration, take minimum storage resources, have excellent performance, and are highly reliable. As a mature and reliable DBMS, the Informix database server works well with small, growing, and large databases, and meets the key requirements for embedded databases, which include the ability to execute without needing any configuration or other DBA administrative activities, and the

flexibility to work on all of the platforms commonly used in the marketplace today.
