Cost Accounting for Non-accountants

President Donald J. Trump lays out his professional and personal worldview in this classic work—a firsthand account of the rise of America's foremost deal-maker. "I like thinking big. I always have. To me it's very simple: If you're going to be thinking anyway, you might as well think big."—Donald J. Trump Here is Trump in action—how he runs his organization and how he runs his life—as he meets the people he needs to meet, chats with family and friends, clashes with enemies, and challenges conventional thinking. But even a maverick plays by rules, and Trump has formulated time-tested guidelines for success. He isolates the common elements in his greatest accomplishments; he shatters myths; he names names, spells

out the zeros, and fully reveals the deal-maker's art. And throughout, Trump talks—really talks—about how he does it. Trump: The Art of the Deal is an unguarded look at the mind of a brilliant entrepreneur—the ultimate read for anyone interested in the man behind the spotlight. Praise for Trump: The Art of the Deal “Trump makes one believe for a moment in the American dream again.”—The New York Times “Donald Trump is a deal maker. Accounting Essentials for Hospitality Managers

There has been much written on the importance of responsibility accounting and integrated reporting to ensure business accountability, but not on how to be a responsible accountant. As the accounting profession is built on the foundation of maintaining public trust, making the right decisions when faced with a challenging dilemma has a major impact on the long-term performance and perception of the firm as well as personal credibility. Accountants make judgement calls on a regular basis: they are privy to highly confidential information regarding their clients and their clients' businesses. Unethical earnings management practices can easily lead to falsifying records, but how does the accounting professional avoid succumbing to these practices when faced with other pressures? Giving Voice to Values in Accounting is the first book to explain the ethical dilemmas faced by accountants in their day-to-day work and to provide clear guidance for accounting students and professionals in navigating through these issues. The Giving Voice to Values (GVV) framework focuses on resolving ethical conflict by encouraging individuals to act on their values. This book provides accounting educators, coaches, trainers and professionals with both the impetus and the tools to easily implement the GVV offering into their own work, their organizations and in the classroom.

Valuepack: Accounting for Non-Accounting Students with Corporate Finance

This highly original work presents laboratory science in a deliberately skeptical way: as an anthropological approach to the culture of the scientist. Drawing on recent work in literary criticism, the authors study how the social world of the laboratory

produces papers and other "texts," and how the scientific vision of reality becomes that set of statements considered, for the time being, too expensive to change. The book is based on field work done by Bruno Latour in Roger Guillemin's laboratory at the Salk Institute and provides an important link between the sociology of modern sciences and laboratory studies in the history of science.
