the Passenger Train Emergency Preparedness (US Federal Railroad Administration Regulation) (FRA) (2018 Edition). Updated as of May 29, 2018 FRA is amending its existing regulation entitled Passenger Train Emergency Preparedness by revising or clarifying various provisions. The final rule clarifies that railroad personnel who communicate or coordinate with first responders during emergency situations must receive certain initial and periodic training and be subject to operational tests and inspections related to the railroad's emergency preparedness plan. The final rule also clarifies that railroads must develop procedures in their emergency preparedness plans that specifically address the safety of passengers with disabilities during actual and simulated emergency situations, such as during train evacuations. The rule also limits the need for FRA to formally approve certain purely administrative changes to approved emergency preparedness plans. In addition, the final rule requires that operational tests and inspections be conducted in accordance with a program that meets certain minimum requirements. Finally, the rule removes as unnecessary the provision discussing the preemptive effect of the regulations. State climate and clean energy policy will play a critical role in the future of the political dialogue and economic development. Policymakers from around the world already recognize the leadership of American states in this domain. Rooted in public policy theory, and employing a mixed-methods approach that includes advanced economic analysis and qualitative research, Benjamin H. Deitchman explores the policy tools that address the politics and economics of clean energy development and deployment across all 50 states. Deitchman includes in his analysis international case studies of this policy context in Canada, Germany, and Australia to reveal different state-level policy tools, the politics behind

the tools, and the economic implications of alternative approaches. The rigorous analysis of the politics of state level institutions and economic implications of subnational climate and clean energy actions offers researchers, students, and policymakers with practical information to advance their understanding of these options in the policy process.

"The evolution of railroad safety, Aldrich argues, involved the interplay of market forces, science and technology, and legal and public pressures. He considers the railroad as a system in its entirety: operational realities, technical constraints, economic history, internal politics, and labor management. Aldrich shows that economics initially encouraged American carriers to build and operate cheap and dangerous lines. Only over time did the trade-off between safety and output - shaped by labor markets and public policy - motivate carriers to develop technological improvements that enhanced both productivity and safety."--BOOK JACKET.

This study is a short-term effort examining alternative ways that government can carry out its activities. The study was commissioned by the Defense Reform Initiative Office and should prove useful to government agencies and decisionmakers who are considering options for organizing themselves or their functions in different ways. The report considers governance structures and organizational forms that offer alternatives to the usual in-house provision of services. The alternatives can offer a chance to adopt modern business practices, streamline the organization, and adopt market mechanisms to improve quality, lower costs, and become more responsive to constituencies. As specific illustrations, the report describes several case studies.

"Craig Sanders has done an excellent job of research his treatment is as comprehensive as anyone could reasonably wish for, and solidly based. In addition, he succeeds in making it all clear as well as any human can. He also manages to inject enough humor and human interest to keep the reader moving." —Herbert H. Harwood, author of *The Lake Shore Electric Railway Story* and *Invisible Giants: The Empires of Cleveland's Van Sweringen Brothers* A complete history of Amtrak operations in the heartland, this volume describes conditions that led to the passage of the Rail Passenger Service Act of 1970, the formation and implementation of Amtrak in 1970–71, and the major factors that have influenced Amtrak operations since its inception. More than 140 photographs and 3 maps bring to life the story as told by Sanders. This book will become indispensable to train enthusiasts through its examination of Americans' long-standing fascination with passenger trains. When it began in 1971, many expected Amtrak to last about three years before going out of existence for lack of business, but the public's continuing support of funding for Amtrak has enabled it and the passenger train to survive despite seemingly insurmountable odds.

would bring the current system to a state-of-good repair, ensure reliable service for all users, including intercity, commuter and freight, and provide sufficient capacity to meet estimated ridership demand through 2030. This report presents a possible concept for Next-Gen High-Speed Rail in the NEC, with new dedicated high-speed rail alignments, stations and equipment that can provide significant travel time savings and attractive premium service by rapidly connecting the Northeast's major hub cities along with its smaller cities, airports and suburban hubs.
