Governance and Development in India

Switchgear And Protection

This book provides an insight in the phenomenon of Mergers and Acquisitions (M&A), including the various forms of corporate restructuring. It highlights the importance of M&A as a strategy for faster growth in the corporate. The book provides an enriched experience of the art of valuation with detailed description of M&A process, deal structuring and financing. The book also provides the broader perspective of Accounting and Regulatory aspects of M&A. While covering the conceptual underpinnings of M&A, the book supplements it with real life examples on each sub-topic with various numeric examples. Thus the judicious blend of theory and practical aspects, through numerical as well as real life case-studies, make the book a source of vast knowledge in the complicated and dynamic world of M&A.

Rethinking Power Sector Reform in the Developing World

Credit rating agencies face a difficult trade-off between delivering both accurate and stable ratings. In particular, its users have consistently expressed a preference for rating stability, driven by the transactions costs induced by trading when ratings change frequently. Rating agencies generally assign ratings on a through-the-cycle basis whereas banks' internal valuations are often based on a point-in-time performance, that is they are related to the current value of the rated entity's or instrument's underlying assets. This paper compares the two approaches and assesses their impact on rating stability and accuracy. We find that while through-the-cycle ratings are initially more stable, they are prone to rating cliff effects and also suffer from inferior performance in predicting future defaults. This is because they are typically smooth and delay rating changes. Using a through-the-crisis methodology that uses a more stringent stress test goes halfway toward mitigating cliff effects, but is still prone to discretionary rating change delays.

During the 1990s, a new paradigm for power sector reform was put forward emphasizing the restructuring of utilities, the creation of regulators, the participation of the private sector, and the establishment of competitive power markets. Twenty-five years later, only a handful of developing countries have fully implemented these Washington Consensus policies. Across the developing world, reforms were adopted rather selectively, resulting in a hybrid model, in which elements of market orientation coexist with continued state dominance of the sector. This book aims to revisit and refresh thinking on power sector reform approaches for developing countries. The approach relies heavily on evidence from the past, drawing both on broad global trends and deep case material from 15 developing countries. It is also forward looking, considering the implications of new social and environmental policy goals, as well as the emerging technological

disruptions. A nuanced picture emerges. Although regulation has been widely adopted, practice often falls well short of theory, and cost recovery remains an elusive goal. The private sector has financed a substantial expansion of generation capacity; yet, its contribution to power distribution has been much more limited, with efficiency levels that can sometimes be matched by well-governed public utilities. Restructuring and liberalization have been beneficial in a handful of larger middle-income nations but have proved too complex for most countries to implement. Based on these findings, the report points to three major policy implications. First, reform efforts need to be shaped by the political and economic context of the country. The 1990s reform model was most successful in countries that had reached certain minimum conditions of power sector development and offered a supportive political environment. Second, countries found alternative institutional pathways to achieving good power sector outcomes, making a case for greater pluralism. Among the top performers, some pursued the full set of market-oriented reforms, while others retained a more important role for the state. Third, reform efforts should be driven and tailored to desired policy outcomes and less preoccupied with following a predetermined process, particularly since the twenty-first-century agenda has added decarbonization and universal access to power sector outcomes. The Washington Consensus reforms, while supportive of the twenty-first-century agenda, will not be able to deliver on them alone and will require complementary policy measures

An Insight into Mergers and Acquisitions

Strategy in Process Engineering

The economic prosperity of a developing country like India depends on the forward and backward linkages of the development process. Agro-based industries lead to the creation of both forward and backward linkages on a large scale by maximizing mutual complementarities of agriculture and industry.¹ Improvement in agricultural productivity depends on a variety of inputs of industrial origin, including fertilizers, power, tools and techniques, while agriculture, in turn, supplies to the industries not only wage goods but also raw materials.

FINANCIAL MATHEMATICS: An Introduction attempts to provide an introductory text on Financial Mathematics to cater to the needs of students at various universities/ institutes in India and abroad. Apart from presenting two Nobel Prize winning theories of Black, Scholes and Merton for option pricing and Mean-Variance approach of Markowitz for portfolio optimization, the text also includes now standard topics of interest rate and interest rate derivatives. Certain interesting and useful topics e.g., Optimal Trading Strategies, Credit Scoring Models and

Portfolio Credit Risk Management, which are normally not covered in a text of this kind, are also included here. A significant portion of the book is devoted to the study of Stochastics of Finance which is very much needed to understand basic concepts related to pricing of derivatives. A special care is taken to evolve a balanced approach between "precise mathematical presentation" and "economic/physical interpretations." A distinctive feature of the book is also to provide applications of MATLAB Financial Toolbox for class room teaching. KEY FEATURES: * A simple class room teaching style of presentation which attempts to provide an optimal trade-off between "precise mathematical presentation" and "economic/physical interpretations." * Numerous small illustrative examples throughout the book with end chapter exercises for practice. * Inclusion of certain special topics in Finance, e.g., Optimal Trading Strategies, Credit Scoring Models, and Portfolio Credit Risk Management. * A section on Summary and Additional Notes to provide a glimpse of current research scenario. * Finance related MATLAB programming and applications of Financial Toolbox. * Glossary of commonly used financial terms * Suitable as a text for M.Sc (Financial Mathematics/ Financial Engineering), M.Sc (Mathematics/ Statistics/ Operations Research), B.Tech/B.E., B.Sc (Hons.), and M.B.A students. Globalisation has brought forth significant changes in India and has generated intense discussion about the national level economic reforms that it has brought in. In the process, the state level reforms have not received much attention. This book is an attempt to fill in this gap. It brings together contributors from different disciplines and presents a contemporary analysis of globalisation, governance reforms and development in India and covers the theoretical and conceptual spectrum, state level reforms, and the social, cultural and political dimensions of globalisation and reforms in the country.

Financial Mathematics

The study of the political economy of development in India is significant as India has emerged as one of the fastest-growing countries during the last three decades and the rate of economic growth and poverty reduction have not been matched in India's subnational states. Although the Union Government has introduced and implemented several economic reforms since 1991 to enhance the economic development, the results of implantation have varied. *Governance and Development in India* compares two Indian subnational states, Andhra Pradesh and Bihar. The book does not consider the state as an aggregate entity; rather, it disaggregates the state relationally and spatially. Concentrating on the micro-institutional variables and the role of regional elites, the author investigates the political roots of the divergence of development trajectories among India's subnational states since liberalization, as an essential aspect of the political economy of development in India. The book explores the black box of the multi-layered state of India and interactions among the Central Government, the states, regional leaders and other stakeholders and explains why the regional leaders have pursued divergent economic strategies using the analytical narrative research method and the subnational comparative research method. Firmly based on the theoretical foundations of the neo-institutional rational choice model of governance, polycentric hierarchy theory and the strategies for regional elite strategy analysis, combined with empirical research, this book is a valuable contribution to the fields of comparative political economy, state politics in India, governance and development in developing countries, and South Asian comparative politics.

Mechanical Vibrations

In 2007-08, central government recruited more than 40,000 new staff, with 78 per cent for positions at junior grades. The NAO's analysis of how six organisations recruit identifies three common issues: the costs of staff used in the recruitment process are too high; the length of the recruitment process is too long; and the quality of the recruitment process needs to be improved. There is no centrally held data on the cost of central government recruitment programmes but the NAO has found the internal staff costs of recruiting an individual vary from £556 to £1,921 per position. There is the potential to reduce these costs by up to 68 per cent, which could deliver savings in internal staff costs across government of up to £35 million a year, without compromising the quality of the candidates appointed. It can typically take 16 weeks to recruit a new member of staff. Time could be saved by better anticipating recruitment demands, using resources more effectively and, where possible, standardising the process. There is little evidence that central government organisations systematically test the quality or effectiveness of their recruitment process. Information on turnover of staff or surveys of candidates and managers are not routinely used to identify the successes and failings of the recruitment process. The report identifies a range of possible ways of improving

external recruitment, ranging from better workforce planning and the standardisation of advertisements and job descriptions, to tailoring the amount of resource used in recruitment to the type of vacancy and sifting out unsuitable candidates at a much earlier stage in the process.
