The Rites of Passage

The number of travelers along the information superhighway is increasing at a rate of 10 percent a month. How will this communications revolution affect our culture and society? Pierre Lévy shows how the unfettered exchange of ideas in cyberspace has the potential to liberate us from the social and political hierarchies that have stood in the way of mankind's advancement. Anthropologist, historian, sociologist, and philosopher, Lévy writes with a depth of scholarship and imaginative insight rare among media critics. At once a profound historical analysis of the development of human culture and a blueprint for the future, *Collective Intelligence* is a visionary work.

Way to Wisdom

Kosik writes that the history of a text is in a certain sense the history of its interpretations. In the fifteen years that have passed since the first (Czech) edition of his *Dialectics of the Concrete*, this book has been widely read and interpreted throughout Europe, in diverse centers of scholarship as well as in private studies. A faithful English language edition is long overdue. This publication of Kosik's work

will surely provoke a range of new interpretations. For its theme is the characterization of science and of rationality in the context of the social roots of science and the social critique which an appropriately rational science should afford. Kosik's question is: How shall Karl Marx's understanding of science itself be understood? And how can it be further developed? In his treatment of the question of scientific rationality, Kosik drives bluntly into the issues of gravest human concern, not the least of which is how to avoid the pseudo-concrete, the pseudo-scientific, the pseudo-rational, the pseudo historical. Starting with Marx's methodological approach, of "ascending from the abstract to the concrete", Kosik develops a critique of positivism, of phenomenalist empiricism, and of "metaphysical" rationalism, counter posing them to "dialectical rationalism". He takes the category of the concrete in the dialectical sense of that which comes to be known by the active transformation of nature and society by human purposive activity.

Physics, Volume 2

Bar Hebraeus's Book of the dove

The American Psychiatric Publishing Textbook of Geriatric Neuropsychiatry

Unlike most other sociology or social science dictionaries, in this translation of the Critical Dictionary of Sociology, taken from the second French edition of the Dictionary and edited by the English sociologist Peter Hamilton, the critical value of this distinctive work is at last made available for a wider audience. Each entry grapples directly with an issue, whether theoretical, epistemological, philosophical, political or empirical, and provides a strong statement of what the authors think about it. The discussions are considered but argumentative. By reaffirming that a non-marxist style of critique is still possible, Boudon and Bourricaud have presented a distinctive approach to the key issues which confront the societies of the Twentieth and Twenty-First centuries. For some this work will be a textbook, for others an indispensable sourcebook of sociological concepts, and for most a way of opening our eyes to new dimensions in our understanding of the great ideas and theories of sociology.

Collective Intelligence

Astronomicon: Volume 3, Liber Tertius

Written for the full year or three term Calculus-based University Physics course for science and engineering majors, the publication of the first edition of Physics in 1960 launched the modern era of Physics textbooks. It was a new paradigm at the time and continues to be the dominant model for all texts. Physics is the most realistic option for schools looking to teach a more demanding course. The entirety of Volume 2 of the 5th edition has been edited to clarify conceptual development in light of recent findings of physics education research. End-of-chapter problem sets are thoroughly over-hauled, new problems are added, outdated references are deleted, and new short-answer conceptual questions are added.

Iohannis Scotti Eriugena Periphyseon (De Divisione Naturae).

This 2007 study was the first to systematically investigate Byzantine imperial ideology, court rhetoric and political thought after the Latin conquest of Constantinople in 1204. It investigates the correspondence and fissures between official political rhetoric and the political ideas of lay thinkers and churchmen, analysing a wide body of sources.

Imperial Ideology and Political Thought in Byzantium, 1204-1330

The great Russian psychologist L. S. Vygotsky has long been recognized as a pioneer in developmental psychology. But his theory of development has never been well understood in the West. *Mind in Society* corrects much of this misunderstanding. Carefully edited by a group of outstanding Vygotsky scholars, the book presents a unique selection of Vygotsky's important essays.

New Challenges for Documentary

A revised and updated edition of this comprehensive narrative history.

Central Problems in Social Theory

Medieval Christian writers distorted the teachings of Islam and caricatured its believers in a variety of ways. This book provides a comprehensive study of Christian polemical responses to Islam in the Middle Ages.

Contra Iudaeos

Van Gennep was the first observer of human behaviour to note that the ritual ceremonies that accompany the landmarks of human life differ only in detail from one culture to another, and that they are in essence universal. Originally published

in English in 1960. This edition reprints the paperback edition of 1977.

Thought and Language

The joint symposium of ICA commissions is always one of the most important event for cartographers. This joint seminar in Orleans was connected to 25th International Cartographic Conference, Paris. Works were presented by members of the commissions on: Cartography and Children, Cartographic Education and Training, Maps and the Internet, Planetary Cartography, Early Warning and Disaster Management.

Le Deuxième Sexe

Wild and Sexy

The classic manifesto of the liberated woman, this book explores every facet of a woman's life.

The Principles of Genetic Epistemology

Historical Archaeology demonstrates the potential of adopting a flexible, encompassing definition of historical archaeology which involves the study of all societies with documentary evidence. It encourages research that goes beyond the boundaries between prehistory and history. Ranging in subject matter from Roman Britain and Classical Greece, to colonial Africa, Brazil and the United States, the contributors present a much broader range of perspectives than is currently the trend.

Brazil, a Brief History

The volume contributes to disrupt the old grand narrative of cultural contact and colonialism in Spanish and Portuguese America in a wide and complete sense. This edited volume aims at exploring contact archaeology in the modern era. Archaeology has been exploring the interaction of peoples and cultures from early times, but only in the last few decades have cultural contact and material world been recognized as crucial elements to understanding colonialism and the emergence of modernity. Modern colonialism studies pose questions in need of broader answers. This volume explores these answers in Spanish and Portuguese America, comprising present-day Latin America and formerly Spanish territories now part of the United States. The volume addresses studies of the particular features of Spanish-Portuguese colonialism, as well as the specificities of Iberian colonization, including hybridism, religious novelties, medieval and modern social

features, all mixed in a variety of ways unique and so different from other areas, particularly the Anglo-Saxon colonial thrust. Cultural contact studies offer a particularly in-depth picture of the uniqueness of Latin America in terms of its cultural mixture. This volume particularly highlights local histories, revealing novelty, diversity, and creativity in the conformation of the new colonial realities, as well as presenting Latin America as a multicultural arena, with astonishing heterogeneity in thoughts, experiences, practices, and, material worlds.

Biology and knowledge: an essay on the relations between organic regulations and cognitive processes

A new edition of a foundational work of cognitive science that outlines a theory of the development of specifically human higher mental functions. Since it was introduced to the English-speaking world in 1962, Lev Vygotsky's *Thought and Language* has become recognized as a classic foundational work of cognitive science. Its 1962 English translation must certainly be considered one of the most important and influential books ever published by the MIT Press. In this highly original exploration of human mental development, Vygotsky analyzes the relationship between words and consciousness, arguing that speech is social in its origins and that only as children develop does it become internalized verbal thought. In 1986, the MIT Press published a new edition of the original translation

by Eugenia Hanfmann and Gertrude Vakar, edited by Vygotsky scholar Alex Kozulin, that restored the work's complete text and added materials to help readers better understand Vygotsky's thought. Kozulin also contributed an introductory essay that offered new insight into Vygotsky's life, intellectual milieu, and research methods. This expanded edition offers Vygotsky's text, Kozulin's essay, a subject index, and a new foreword by Kozulin that maps the ever-growing influence of Vygotsky's ideas.

Maps for the Future

In the Fourth Edition of this bestselling book, John W Creswell and new co-author Cheryl N Poth explore the philosophical underpinnings, history and key elements of each of five qualitative inquiry traditions: narrative research, phenomenology, grounded theory, ethnography and case study - putting them side by side, so that we can see the differences. The authors relate research designs to each of the traditions of enquiry. They compare theoretical frameworks and ways to employ standards of quality, as well as strategies for writing introductions to studies, collecting data, analyzing data, writing a narrative and verifying results. New in this edition: Updated materials on each tradition More on interpretive frameworks and ethics More visual depictions of the five approaches Two new topical articles in Chapter 5, reproduced in full in the appendices.

Deconstructing Communication

Maxims and Moral Reflections

This book displays the striking creativity and profound insight that characterized Freire's work to the very end of his life—an uplifting and provocative exploration not only for educators, but also for all that learn and live.

A Theory of Constitutional Rights

This volume contains the Latin text of the third book of Manilius, first published in 1916 and then reissued in a second edition in 1937.

Personality and Personal Growth

Man differs from the lower animals because he preserves his past experiences. What happened in the past is lived again in memory. About what goes on today

hangs a cloud of thoughts concerning similar things undergone in bygone days. With the animals, an experience perishes as it happens, and each new doing or suffering stands alone. But man lives in a world where each occurrence is charged with echoes and reminiscences of what has gone before, where each event is a reminder of other things. Hence he lives not, like the beasts of the field, in a world of merely physical things but in a world of signs and symbols. A stone is not merely hard, a thing into which one bumps; but it is a monument of a deceased ancestor. A flame is not merely something which warms or burns, but is a symbol of the enduring life of the household, of the abiding source of cheer, nourishment and shelter to which man returns from his casual wanderings. Instead of being a quick fork of fire which may sting and hurt, it is the hearth at which one worships and for which one fights. And all this which marks the difference between bestiality and humanity, between culture and merely physical nature, is because man remembers, preserving and recording his experiences.

Publisher Description

The Sad End of Policarpo Quaresma

The third edition of the popular Textbook of Geriatric Neuropsychiatry thoroughly reviews this clinical subspecialty devoted to the diagnosis and treatment of psychiatric and behavior disorders in aging patients who display impaired brain function. In this text, world-renowned neuropsychiatrists and neuroscientists provide practical application of the latest research for both experienced clinicians and those new to the study of neuropsychiatry for the elderly. The book provides a comprehensive approach to treatment and contemporary neuroscience: Addresses the reality of an increasing aging population and the accompanying psychosocial changes this brings for patients and caregivers. Focuses on the health care of patients with neuropsychiatric illness. Consolidating the continued explosion of neuroscience research and the understanding of human behavior as it relates to aging. Bridges the fields of geriatric neurology and geriatric psychiatry, emphasizing relationships between neuropsychiatric illness and the aging of the nervous system. Responds to advancements in the study and science of geriatric neuropsychiatry, as well as feedback from past readers and clinicians. Concise and organized for easy reference, the textbook is divided into four parts that disclose clinically relevant information within the context of the very latest in neuroscience research and clinical application, including: Clinical definitions of the essential neuropsychiatric syndromes and disorders commonly seen in the elderly and how these disorders manifest. Emphasis on the principles and special considerations essential for the safe and effective treatment of neuropsychiatric disorders in the elderly. Study of the importance of interactions among aging; psychosocial, family,

and neuropharmacological elements; and brain stimulation therapies. In-depth review of the influence of the aging nervous system on the pathophysiology, neuropsychiatric manifestations, clinical course, and prognosis of neurological and psychiatric illness in the elderly. Geriatric neuropsychiatry is an integrative specialty that draws from a diversity of fields including psychiatry, neuropsychiatry, neuroimaging, neuropsychopharmacology, gerontology, genetics, and molecular biology, to name a few. Incorporating these perspectives, this text is highly recommended for psychiatrists, neurologists, psychologists, geriatricians, psychiatric nurses, residents and fellows, and other clinicians interested in the study and treatment of the effects of aging on the brain.

Meeting the Foreign in the Middle Ages

“An eloquent expression of a great hope that philosophy may again become an activity really relevant not only to the perennial problems of life and death but to the unusual configurations of such problems in our time.”—Julian N. Hartt, Yale Review “Original, sincere, cultivated, and stimulating.”—Philosophy One of the founders of existentialism, the eminent philosopher Karl Jaspers here presents for the general reader an introduction to philosophy. In doing so, he also offers a lucid summary of his own philosophical thought. In Jaspers’ view, the source of philosophy is to be found “in wonder, in doubt, in a sense of forsakenness,” and the philosophical quest is a process of continual change and self-discovery. In a

new foreword to this edition, Richard M. Owsley provides a brief overview of Jaspers' life and achievement.

The Archetypes and the Collective Unconscious

Qualitative Inquiry and Research Design (International Student Edition)

'The seed of madness exists in all of us and with no warning may attack, overpower, crush and bury us ' Policarpo Quaresma - fastidious civil servant, dedicated patriot, self-styled visionary - is a defender of all things Brazilian, full of schemes to improve his beloved homeland. Yet somehow each of his ventures, whether it is petitioning for Brazil's national language to be changed, buying a farm to prove the richness and fertility of the land, or offering support to government forces as they suppress a military revolt - results in ridicule and disaster. Quixotic and hapless, Quaresma's dreams will eventually be his undoing. Funny, despairing, moving and absurd, Lima Barreto's masterpiece shows a man and a country caught in the violent clash between illusion and reality, hope and decline, sanity and madness.

An Outline of Philosophy

Through flashbacks, recollections, and short narratives, this story powerfully communicates an individual's experience of exile from an emotional and psychological perspective while at the same time linking the individual experience to the collective one."--BOOK JACKET.

The Didascalicon of Hugh of St. Victor

Through a detailed examination of the basis of the idea of communication - with its semantic core of "commonality" or the transcendence of difference - Chang argues against the tendency of theorists to value understanding over misunderstanding, clarity over ambiguity, order over disorder. To this end the author revisits the thought of Derrida and considers deconstruction in general. Specifically, he uses the critique of the phenomenological tradition emerging from poststructuralism to clarify the commitments and assumptions inherent in models of communication. A seminal work, *Deconstructing Communication* will serve as the guiding framework for a constructive debate about the future direction of communication theory.

Situated at the intersection of current debates regarding meaning and representation, Deconstructing Communication casts doubt on the seeming innocence of the activity of communication. Using poststructuralist literary theory and philosophy, Brian K. G. Chang argues that modern theories fail to provide an adequate explanation for how communication is possible.

Dialectics of the Concrete

This classic work of constitutional theory analyzes the general structure of constitutional rights and their judicial application. It deals with a wide range of problems common to all systems of constitutional rights review - from balancing rights to deciding the limits of their scope.

Translations from the Philosophical Writings of Gottlob Frege

This collection brings together an outstanding group of historical, cultural, and literary scholars to investigate the complicated, nuanced, and often surprising union and desire and dread associated with the figure of the foreign Other in the Middle Ages--represented variously by Muslims, Jews, heretics, pagans, homosexuals, lepers, monsters, and witches. Exploring the diverse manifestations of the foreign in medieval literature, historical documents, religious treatises, and art, these essays mine the traces of unprecedented encounters in which fascination and fear meet.

Archaeology of Culture Contact and Colonialism in Spanish and Portuguese America

This is the first complete translation into English of Hugh of Saint Victor's

Didascalicon. Composed in the late 1130s, the Didascalicon selects and defines all of the important areas of knowledge, demonstrating that not only are these areas essentially integrated, but that in their integrity they are necessary for the attainment of human perfection and divine destiny.

The concept of 'Archetypes' and the hypothesis of 'A Collective Unconscious' are two of Jung's better known and most exciting ideas. In this volume - taken from the Collected Works and appearing in paperback for the first time - Jung describes and elaborates the two concepts. Three essays establish the theoretical basis which are then followed by essays on specific archetypes. The relation of these to the

process of individuation is examined in the last section. The Archetypes and the Collective Unconscious is one of Jung's central works. There are many illustrations in full colour.
