Career Aptitude and Selection Tests

Bernard R. Gifford and Linda C. Wing Standardized testing has become a ubiquitous feature of American life. As a major source of information for reducing uncertainty in the allocation of merit based educational, training, and employment opportunities, testing affects the life chances of individuals. Moreover, testing influences the way in which our society judges itself and provides for our collective future. Test scores may determine a child's admission to kindergarten and promotion to the first grade. Most states award the high school diploma only if a student has passed a minimum competency test. Major institutions of higher education typically require applicants to supplement their records of academic achievement with scores on college admissions tests. In the labor market, as a condition of employment or assignment to training programs, more and more employers are requiring workers to sit for personnel selection tests. Additionally, it has become commonplace to use test scores to calibrate our national sociopolitical condition and our capacity to compete with other countries in the global economy. In short, with increasing frequency and intensity, scores on examinations that purport to be objective and precise measures of individual knowledge, abilities,

and potential are playing a critical role in the opportunity marketplace. Similarly, test scores are exercising growing influence in assessments of our social and economic institutions and in policy decisions about the relative investments that should be made in each. In all these instantiations, test scores are at the center of high-stakes decision making about the future of individuals and of the nation itself.

How we recruit future healthcare professionals is critically important, as the demand for high quality healthcare increases across the globe. This book questions what the evidence tells us about how best to select those most suited to a career in healthcare, ensuring that the approaches used are relevant and fair to all who apply. The editors of this collection take a comprehensive look at the latest research surrounding recruitment and selection into healthcare roles. Each chapter is authored by leading experts and, using international case material, the practical implications for workforce policy are explored. They review the key stages in

designing effective selection systems and discuss how best to evaluate the quality of selection processes. Evidence from role analysis studies as well as the effectiveness of different selection methods including aptitude and situational judgment tests, personality assessment and interviews are examined. Chapters also cover approaches to student selection and recruitment for postgraduate trainees through to senior appointments. Finally they highlight contemporary issues in recruitment, including the use of technology, selecting for values, candidate perceptions, coaching issues and how best to promote diversity and widening access.

Career, Aptitude & Selection Tests

This book is focused on work, occupation and career development: themes that are fundamental to a wide range of human activities and relevant across all cultures. Yet theorizing and model building about this most ubiquitous of human activities from international perspectives have not been vigorous. An examination of the literature pertaining to career development, counseling and guidance that has developed over the last fifty years reveals theorizing and model building have been largely dominated by Western epistemologies, some of the largest

workforces in the world are in the developing world. Career guidance is rapidly emerging as a strongly felt need in these contexts. If more relevant models are to be developed, frameworks from other cultures and economies must be recognized as providing constructs that would offer a deeper understanding of career development. This does not mean that existing ideas are to be discarded. Instead, an integrative approach that blends universal principles with particular needs could offer a framework for theorizing, research and practice that has wider relevance. The central objective of this handbook is to draw the wisdom and experiences of different cultures together to consider both universal and specific principles for career guidance and counseling that are socially and economically relevant to contemporary challenges and issues. This book is focused on extending existing concepts to broader contexts as well as introducing new concepts relevant to the discipline of career guidance and counseling.

Selection and Recruitment in the Healthcare Professions

Providing essential practice, it includes psychological tests that mirror those you are likely to encounter, including abstract visual tests, verbal and numerical reasoning aptitudes, practical skills and understanding as well as different types of mechanical and spatial tests.

The Astronaut Selection Test Book

Look around your office. Turn on the TV. Incompetent leadership is everywhere, and there's no denying that most of these leaders are men. In this timely and provocative book, Tomas Chamorro-Premuzic asks two powerful questions: Why is it so easy for incompetent men to become leaders? And why is it so hard for competent people--especially competent women--to advance? Marshaling decades of rigorous research, Chamorro-Premuzic points out that although men make up a majority of leaders, they underperform when compared with female leaders. In fact, most organizations equate leadership potential with a handful of destructive personality traits, like overconfidence and narcissism. In other words, these traits may help someone get selected for a leadership role, but they backfire once the person has the job. When competent women--and men who don't fit the stereotype--are unfairly overlooked, we all suffer the consequences. The result is a deeply flawed system that rewards arrogance rather than humility, and loudness

rather than wisdom. There is a better way. With clarity and verve, Chamorro-Premuzic shows us what it really takes to lead and how new systems and processes can help us put the right people in charge.
