Jeremy Clarkson knows there's more to life than cars. There is, after all, a whole world out there just waiting to be discovered. So, before he gets on with the job in hand, he'd like to take some time out to consider the bigger picture. Don't worry, he'll get on to the car bit eventually, but before we do, there's time to learn about: Why Galapagos tortoises are all mental France, reduced to the size of a small coconut Why Jeremy Paxman and the bass guitarist of AC/DC aren't so very different The problems of being English and God's most stupid creation And then there's the cars: Whether it's the poxiest little runabout or an exotic, firebreathing supercar, anything on four wheels is approached without fear or favour. What emerges from the ashes is not always pretty. But it is, invariably, very, very funny.

The Official CHFI Study Guide (Exam 312-49)

Studies of Japanese syntax have played a central role in the long history of Japanese linguistics spanning more than 250 years in Japan and abroad. More recently, Japanese has been among the languages most intensely studied within modern linguistic theories such as Generative Grammar and Cognitive/Functional Linguistics over the past fifty years. This volume presents a comprehensive survey of Japanese syntax from these three research strands, namely studies based on the traditional research methods developed in Japan, those from broader functional perspectives, and those couched in the generative linguistics framework. The twenty-four studies contained in this volume are characterized by a detailed analysis of a grammatical phenomenon with broader implications to general linguistics, making the volume attractive to both specialists of Japanese and those interested in learning about the impact of Japanese syntax to the general study of language. Each chapter is authored by a leading authority on the topic. Broad issues covered include sentence types (declarative, imperative, etc.) and their interactions with grammatical verbal categories (modality, polarity, politeness, etc.), grammatical relations (topic, subject, etc.), transitivity, nominalizations, grammaticalization, word order (subject, scrambling, numeral quantifier, configurationality), case marking (ga/no conversion, morphology and syntax), modification (adjectives, relative clause), and structure and interpretation (modality, negation, prosody, ellipsis). A Guide to Prayer for All Who Walk with God

This edited volume is devoted to Big Data Analysis from a Machine Learning standpoint as presented by some of the most eminent researchers in this area. It demonstrates that Big Data Analysis opens up new research problems which were either never considered before, or were only considered within a limited range. In addition to providing methodological discussions on the principles of mining Big Data and the difference between traditional statistical data analysis and newer computing frameworks, this book presents recently developed algorithms affecting such areas as business, financial forecasting, human mobility, the Internet of Things, information networks, bioinformatics, medical systems and life science. It explores, through a number of specific examples, how the study of Big Data Analysis has evolved and how it has started and will most likely continue to affect society. While the benefits brought upon by Big Data Analysis are underlined, the book also discusses some of the warnings that have been issued concerning the potential dangers of Big Data Analysis along with its pitfalls and challenges.

This edition of Swokowski's text is truly as its name implies: a classic. Groundbreaking in every way when first published, this book is a simple, straightforward, direct calculus text. It's popularity is directly due to its broad use of applications, the easy-to-understand writing style, and the wealth of examples and exercises which reinforce conceptualization of the subject matter. The author wrote this text with three objectives in mind. The first was to make the book more student-oriented by expanding discussions and providing more examples and figures to help clarify concepts. To further aid students, guidelines for solving problems were added in many sections of the text. The second objective was to stress the usefulness of calculus by means of modern applications of derivatives and integrals. The third objective, to make the text as accurate and error-free as possible, was accomplished by a careful examination of the exposition, combined with a thorough checking of each example and exercise.

To understand Africa, one must understand Nigeria, and few Americans understand Nigeria better than Karl Maier. This House Has Fallen is a bracing and disturbing report on the state of Africa's most populous, potentially richest, and most dangerously dysfunctional nation.Each year, with depressing consistency, Nigeria is declared the most corrupt state in the entire world. Though Nigeria is a nation into which billions of dollars of oil money flow, its per capita income has fallen dramatically in the past two decades. Military coup follows military coup. A bellwether for Africa, it is a country of rising ethnic tensions and falling standards of living, very possibly on the verge of utter collapse -- a collapse that could dramatically overshadow even the massacres in Rwanda.A brilliant piece of reportage and travel writing, This House Has Fallenlooks into the Nigerian abyss and comes away with insight, profound conclusions, and even some hope. Updated with a new preface by the author.

Future mobile access networks will require upgraded telecommunications networks; 3G LTE/ SAE is the next step, allowing data rates above 100 Mbps. Telecommunications engineers will need to understand the new SAE/ EPC architecture and its tendency towards automatic configuration, but the complexity, length and dryness of the standards documents make it difficult for them to find the information they need and work out how to apply it to their daily product and network development. This book - a new edition of SAE and the Evolved Packet Core - provides clear, concise and comprehensive coverage of the entire SAE/ EPC architecture, explaining concepts and standards and how they are used in commercial service settings. More than just a précis of the standards, it gives real insight into their development and the real-world scenarios in which they have been used since the publication of the first edition. This second edition places more emphasis on key aspects such as mobile systems and protocols (Diameter, GTP, S1-AP), and includes new coverage of femtocells, SIPTO, LIPA, LTE relay and LTE Advanced. Up-to-date coverage of SAE including the latest standards development Easily accessible overview of the architecture and concepts defined by SAE Thorough description of the Evolved Packet Core for LTE, fixed and other wireless accesses Comprehensive explanation of SAE key concepts, security and Quality-of-Service Covers potential service and operator scenarios including interworking with existing 3GPP and 3GPP2 systems Detailed walkthrough of network entities, protocols and procedures Written by established experts in the SAE standardization process, all of whom have extensive experience and understanding of its goals, history and vision

Situational Judgement Test

American literary nationalism is traditionally understood as a cohesive literary tradition developed in the newly independent United States that emphasized the unique features of America and consciously differentiated American literature from British literature. Robert S. Levine challenges this assessment by exploring the conflicted, multiracial, and contingent dimensions present in the works of late eighteenth- and nineteenth-century American and African American writers. Conflict and uncertainty, not consensus, Levine argues, helped define American literary nationalism during this period. Levine emphasizes the centrality of both inter- and intra-American conflict in his analysis of four illuminating "episodes" of literary responses to questions of U.S. racial nationalism and imperialism. He examines Charles Brockden Brown and the Louisiana Purchase; David Walker and the debates on the Missouri Compromise; Nathaniel Hawthorne, Herman Melville, and Hannah Crafts and the blood-based literary nationalism and expansionism of the mid-nineteenth century; and Frederick Douglass and his approximately forty-year interest in Haiti. Levine offers critiques of recent developments in whiteness and imperialism studies, arguing that a renewed attention to the place of contingency in American literary history helps us to better understand and learn from writers trying to make sense of their own historical moments.
