Text/atlas of Histology

New York City has the largest medical examiner's office in the United States, and the Brooklyn division is the busiest of the five boroughs. Charles A. Catanese received his Forensic Pathology fellowship training in New York, and then worked full time as a Medical Examiner in the Brooklyn office for more than 10 years. He has personally performed more than 4000 autopsies, including over 400 homicides. Dr. Catanese has worked through several disasters, including TWA Flight 800, AA Flight 587, and more than nine months on the World Trade Center fatalities. He is currently the Chief Medical Examiner of Orange County, New York. Drawing on his wealth of knowledge and experience in solving some of the most difficult cases a forensic examiner could encounter, he assembles hundreds of images from his own work experience to present the Color Atlas of Forensic Medicine and Pathology. Featuring twice the number of images as any other forensic pathology atlas, the book is filled with high-resolution photos that demonstrate postmortem changes of the human body and the different types of patterns produced in deaths caused by: Natural causes Diagnostic or therapeutic procedures Substance abuse Poisoning Child abuse Firearms Blunt instruments Sharp instruments Burns Asphyxia This easy-to-read atlas, created for medical and non-medical personnel, covers basic and advanced forensic concepts that relate to all manners of deaths. The carefully worded, unambiguous text describing each photo and the side-by-side comparisons of similar, yet different, pathologies make this remarkable atlas a powerful teaching tool for all those who must confront and solve the mystery of human demise. A fully searchable DVD version is also available.

Avian Anatomy

The first edition of Color Atlas of Fetal and Neonatal Histology was an important step in updating the histology texts available to practicing pathologists and pathology trainees who perform fetal autopsy and/or participate in research involving fetal tissues. It was a well-received volume that filled a major gap in pathology references related to normal histology and provided a comprehensive, state-of-the-art review of fetal and neonatal histology. While the basics of fetal histology have changed little in the intervening years since publication of the first edition, this successor edition provides new insights and a fresh perspective. This book contains six new chapters including: blood vessels and lymphatics, external genitalia, eye, ear, skin, and maceration changes. Many existing chapters have also been expanded to address a greater breadth of fetal and neonatal histology such as postnatal testis development and the cardiac conduction system. The "Special Considerations" sections were also expanded in many chapters to address particularly problematic issues within individual organ systems. The book reviews the histology of the major organ systems in the fetus and neonate and provides detailed images, up-to-date references, and practical guidelines for identifying tissues across all gestational ages of development. The second edition of Color Atlas of Fetal and Neonatal Histology serves as the ultimate go-to resource for pathologists and researchers dealing with, and interested in, fetal and neonatal histology. It provides a comprehensive summary of the current status of the field with excellent and extensive illustrative examples that help guide the clinical study of fetal and neonatal histology and stimulate investigative efforts with fetal tissue.

Bitemark Evidence

Designed to provide students with a foundation in understanding and interpreting histologic and cytologic preparations, Color Atlas of Veterinary Histology is a practical benchside reference focusing on the normal histology of eight common domestic species. This Third Edition has been revised with new images, information, and updated terminology throughout. Introductory chapters have also been expanded to offer more complete coverage of the basic types of tissues, providing an even more thorough grounding in the principles of histology. For the first time, the more than 900 photomicrographs are available digitally in an interactive atlas on CD, offering images available for download with zoom capability. The new edition of this veterinary-specific histology atlas provides veterinary and veterinary technician students with an essential pictorial resource for interpreting histologic preparations.

High-yield Lung

Bridging the gap between textbook diagrams and the complex reality of histological preparations, this magnificent atlas of human microanatomy is designed to help students understand the complex structures encountered when viewing microscopic sections of tissues. Instead of simply depicting an individual section, each drawing is a compilation of the key structures and features seen in many preparations from similar tissues or organs. Invaluable to students in a range of life science and medical disciplines including human and veterinary medicine, dentistry, mammalian biology, pharmacy, and nursing.
