This edited collection brings together some of the leading researchers in the study of the daily experience of work and daily well-being. The book covers both theoretical and methodological issues involved in studying workers' well-being as it evolves on a daily basis. Interest in the topic of daily fluctuations in worker well-being has grown rapidly over the past ten years. This is partly because of advances in research and statistical methods, but also because researchers have found that the psychological processes that influence well-being play out from moment to moment, and from day to day. Topics covered in this book include: The theoretical basis of studying work as a series of daily episodes Assessment of different components of daily well-being Factors involved in the regulation of well-being at work Qualitative and quantitative diary experience sampling and event reconstruction methods Latent growth curve modelling of diary data The final chapter of the

book includes a preview of how daily methods may evolve in the future. Intended as a guide for researchers with good knowledge of field research methods, the book will be particularly useful to researchers of work-related phenomena who seek to expand their knowledge of dynamic methods in field contexts, and those who want to start using these methods. It will also be of interest to students of work psychology and organisational behaviour, and related disciplines.

Establishing a brand name is the goal of anyone introducing a new product, and maintaining a brand over time is even more profitable. Established brands are now major corporate assets, as shown when Philip Morris bought Kraft for four times its book value. The Handbook of Brand Management explains the ins and outs of managing brand names in today's fast-changing, competitive marketplace. Developed by marketing expert David Arnold to answer managers' actual questions about brands, this essential guide combines expert advice with the stories of thirteen successful companies from around the world. This book describes how to research, target, budget, and promote new brand. It presents detailed analyses of marketing plans used in situations both good (how did Anheuser-Busch introduce Michelob Dry so successfully?) and bad (how could Perrier survive the benzene scare?). For established brands, managers learn tactics to reverse a market-share decline, to extend brands internationally, and to appraise a brand name's financial value. They find insights in the examples of Schering-Plough "stretching" the Coppertone brand to include sunscreens for children, Birds Eye freezing out competitors by how it positioned a new meal in consumers' minds, and many other popular brand-name products.

This is a true-crime story of the murder of an art form: punk rock. Gina Arnold has been witness to this gradual annihilation, and she's not shy about pointing out the perpetrators: Tipper Gore, Rolling Stone, Geffen Records, Miller beer, and even the progenitors of punk themselves, the Sex Pistols, are all implicated in the demise of independent music. In *Route 666: On the Road to Nirvana*, Gina Arnold gave us a road map to the defiant fury that shaped punk's harsh, musical bloodletting. But now Kurt Cobain is dead. And Courtney Love is playing shows sponsored by beer companies, MasterCard is financing the Monsters of Rock tour, and the Red Hot Chili Peppers are sporting free Airwalk sneakers. Arnold knows something has gone terribly wrong. Bad Religion, Metallica, Rancid, Rage Against the Machine, Soundgarden, Smashing Pumpkins, Green Day, Pearl Jam, the Fastbacks, Beastie Boys, Nine Inch Nails--find out who sold out, who stayed real, and what independent music must do now to regain its lost edge. In 1978 Sid Vicious mocked a Sinatra classic with his version of "My Way." Well, it's 1997, and punk has lost its way. In *Kiss This* Gina Arnold just may show it the way home.

The Innovation and Sustainability in Base of the Pyramid Markets series comprises four volumes, covering theoretical perspectives, themes, and various aspects of interest across four key geographical regions where Base of the Pyramid (BOP) markets are located - Latin America, Asia, Africa, and affluent countries. This book focuses on the BOP markets in Asia, and in particular the challenge of how to address the needs of deprived population groups in a sustainable manner. Base of the Pyramid Markets in Asia deals with, amongst other topics, the innovation and innovativeness that is necessary to better the life of resource-poor population groups. The book covers various themes and aspects of BOP markets in Asia and their embeddedness in socio-cultural settings, and adopts a variety of theoretical angles for analysing the phenomena. Thus, this book aims at furthering our understanding of BOP markets in Asia and at deriving valuable recommendations for managers and policy makers. BOP markets face unique challenges and private sector actors alone cannot ensure

sustainable value creation activities. Multidimensional elements and factors are needed to alleviate poverty and create economic development aligned with principles of sustainable development. Therefore, the book comprises critical and empirical studies as well as conceptual papers on the challenges linked to BOP markets in Asian countries. This book is recommended reading for managers and policy makers, as well as students and academics interested in Base of the Pyramid markets.

## **Accounting for Management Decisions**

Arnold Ziegel formed Mountain Mentors Associates after his retirement from a corporate banking career of more than 30 years at Citibank. The lessons learned from his experience in dealing with entrepreneurs, multinational corporations, highly leveraged companies, financial institutions, and structured finance, led to the development and delivery of numerous senior level credit risk training programs for major global financial institutions from 2002 through the present. This book was conceived and written as a result of the development of these courses and his experience as a corporate banker. It

illustrates the fundamental issues of credit and credit analysis in a manner that tries to take away its mystery. The overriding theme of this book is that when an investor extends credit of any type, the goal is "to get your money back," and with a return that is commensurate with the risk. The goal of credit analysis is not to make "yes or no" decisions about the extension of credit, but to identify the degree of risk associated with a particular obligor or a particular credit instrument. This is consistent with modern banking industry portfolio management and the rating systems of credit agencies. Once the "riskiness" of an obligor or credit instrument is established, it can be priced or structured to match the risk demands or investment criteria of the entity that is extending the credit. A simple quote from Mr. J. P. Morgan is used often in this text - "Lending is not based primarily on money or property. No sir, the first thing is character." This statement represents one of the conflicts in modern credit analysis - that of models for decision making versus traditional credit analysis. The 2008 financial crisis was rooted in the mortgage backed securities business. Sophisticated models were used by investors, banks, and rating agencies to judge the credit worthiness of billions (and maybe trillions) of dollars worth of residential mortgage loans that were packaged into securities and distributed to investors. The models indicated that these securities would have very low losses. Of course, huge losses were incurred. Mr. Morgan had a good point. In this case it was both property and character. The properties that were the collateral for many of the mortgages had much less value than was anticipated. The valuation of the collateral was naive and flawed. Many assumptions were made that the value of homes would rise without pause. Many mortgage loans were made that were at or even above the appraised value of a residence. But character was a huge, perhaps larger, factor behind these losses. Many of the residential mortgage loans were made to individuals who knew that they did not have the income to make the required payments on the mortgages. Many of the mortgage brokers and lenders who made these loans also knew that many of the borrowers were not properly qualified. And, many of the bankers who securitized these loans also may have doubted the credit quality of some of the underlying mortgages. If bankers and rating agencies understood the extent of the fraud and lax standards in the fundamental loans backing the mortgage securities, or were willing to acknowledge it, the fiasco would not have occurred."

This book assesses the role of the doctrine of insurable interest within modern insurance law by examining its rationales and suggesting how shortcomings could be fixed. Over the centuries, English law on insurable interest – a combination of statutes and case law – has become complex and unclear. Other jurisdictions have relaxed, or even abolished, the requirement for an insurable interest. Yet, the UK insurance industry has overwhelmingly supported the retention of the doctrine of insurable interest. This book explores whether the traditional justifications for the doctrine – the policy against wagering, the prevention of moral hazard and the doctrine’s relationship with the indemnity principle – still stand up to scrutiny and argues that, far from being obsolete, they have acquired new significance in the global financial markets and following the liberalisation of gambling. It is also argued that the doctrine of insurable interest is an integral part of a system of insurance contract law rules and market practice. Rather than rejecting the doctrine, the book recommends a recalibration of insurable interest to afford better pre-contractual transparency to a proposer as to the suitability of the policy to his or her interest in the subject-matter to be insured. Providing a powerful defence for the retention of insurable interest, this book will appeal to both academics and practitioners working in the field of insurance law.

“THE MOST NOTABLE PERSONAL FINANCE WRITING OF 2013 . . . WAS A HANDWRITTEN 4 × 6 INDEX CARD.” —MINNEAPOLIS STAR TRIBUNE TV analysts and money managers would have you believe your finances are enormously complicated, and if you don’t follow their guidance, you’ll end up in the poorhouse. They’re wrong. When University of Chicago professor Harold Pollack interviewed Helaine Olen, an award-winning financial journalist and the author of the bestselling Pound Foolish, he made an offhand suggestion: everything you need to know about managing your money could fit on an index card. To prove his point, he grabbed a 4" x 6" card, scribbled down a list of rules, and posted a picture of the card online. The post went viral. Now, Pollack teams up with Olen to explain why the ten simple rules of the index card outperform more

complicated financial strategies. Inside is an easy-to-follow action plan that works in good times and bad, giving you the tools, knowledge, and confidence to seize control of your financial life.

In 1999 natural catastrophes and man-made disasters claimed more than 105,000 lives, 95 percent of them in the developing world, and caused economic losses of around US\$100 billion. In 1998 the twin disasters of the Yangtze and Hurrigan Mitch accounted for two-thirds of the US\$65 billion loss. The geographical areas affected may vary, but one constant is that the per capita burden of catastrophic losses is dramatically higher in developing countries. To respond to an increased demand to assist disaster rcovery programmes, the World Bank set up the Disaster Management Facility in 1998, to help provide the Bank with a more rapid and strategic response to disaster emergencies. The DMF focuses on risk identification, risk reduction, and risk sharing/transfer, the three major topics in this volume. The DMF also promotes strategic alliances with key private, government, multilateral and nongovernmental organisations to ensure the inclusion of disaster risk reduction as a central value of development. The most important of these partnerships is the ProVention Consortium, launched in February 2000, based on the premise that we must all take responsibility for making the new millennium a safer one.

"The most useful guide to getting things done since Getting Things Done." --Adam Grant, author of Give and Take Learn how small behavioral changes can lead to major personal and professional self-improvement Whether trying to lose weight, save money, get organized, or advance on the job, we're always setting goals and making resolutions, but rarely following through on them. According to longtime Wall Street technology strategist Caroline Arnold, the "big push" strategy of the New Year's resolution is designed to fail, because it broadly pits our limited willpower stores against an autopilot of entrenched behaviors and attitudes that is far more powerful. To change ourselves permanently, we need to focus our self-control on precise behavioral targets and overwhelm them. Small Move, Big Change is Arnold's guide to turning broad personal goals into meaningful and discrete behavioral changes that lead to permanent improvement. Providing scores of engaging real-world examples and new scientific findings, she shows us that while the traditional resolution promises rewards on a distant "someday," microresolutions work because they reward us today by instantly altering our routines and, ultimately, ourselves.
