Reflecting the 2010 Emergency Cardiovascular Care guidelines, ACLS Study Guide, 4th Edition offers a complete, full-color overview of advanced cardiovascular life support. An easy-to-read approach covers everything from airway management and rhythms and their management to electrical therapy, acute coronary syndromes, and acute stroke. In addition to the latest ACLS treatment algorithms, this edition includes new case studies, new photos and illustrations, a heart rate ruler, and a handy ACLS quick-reference card for use in the field. Written by Barbara Aehlert, ACLS Study Guide is the official textbook for the American Safety & Health Institute ACLS certification course. A pretest and posttest -- each containing 50 questions with answers and rationales -- allow you to check your knowledge prior to and after your study. Chapter objectives preview the main points in each chapter. Stop and Review sections at the end of the chapters help you remember the most important information. ACLS Pearls boxes offer key points and useful tips for clinical practice. Keeping it Simple boxes provide essential information in a clear and concise manner. Ten case studies present real-life clinical situations, allowing you to make decisions based on information in the Preparatory section. Consistent format of case studies includes Objective, Skills to Master, Rhythms to Master, Medications to Master, Related Text Chapters, Essential Actions, and Unacceptable Actions. A heart rate ruler is included to help you interpret ECGs. 4 x 6 pocket-size quick-reference card contains key ACLS algorithms for field use. 100 new and updated photos and illustrations show key ACLS procedures and equipment. Pharmacological interventions are integrated into the chapters for a more cohesive learning experience. New streamlined approach reduces the number of pages and simplifies the information you need to know.

Reinforce your understanding of radiation therapy and prepare for the Registry exam! Mosby's Radiation Therapy Study Guide and Exam Review is both a study companion for Principles and Practice of Radiation Therapy, by Charles Washington and Dennis Leaver, and a superior review for the certification exam offered by the American Registry for Radiologic Technology (ARRT). An easy-to-read format simplifies study by presenting information in concise bullets and tables. Over 1,000 review questions are included. Written by radiation therapy expert Leia Levy, with contributions by other radiation therapy educators and clinicians, this study tool provides everything you need to prepare for the ARRT Radiation Therapy Certification Exam. This title includes additional digital media when purchased in print format. For this digital book edition, media content is not included. Over 1000 multiple-choice questions in Registry format are provided in the text, allowing you to both study and simulate the actual exam experience. Focus questions and key information in tables make it easy to find and remember information for the exam. Review exercises reinforce learning with a variety of question formats to fit different learning styles. Questions are organized by ARRT content categories and are available in study mode with immediate feedback after each question, or in exam mode, which simulates the test-taking experience in a timed environment with ARRT exam-style questions.

Study Guide for the Re-Forming Tradition

Students and social workers preparing for the social work clinical licensure exam will find an invaluable study resource in both the Social Work ASWB(R) Advanced Generalist Exam Guide and the Social Work ASWB(R) Advanced Generalist Practice Test. Written by a prominent social work leader and trainer for social work licensing exams in the United States, these materials are based on years of time-tested exam prep workshops conducted by the author. The guide is comprehensive yet focuses on the material most likely to be included on the exam, so readers can prioritize information as they study. A self-assessment section helps identify strengths and weaknesses before tackling the material. The author shares her extensive knowledge of the exam by providing useful test-taking strategies and tips for overcoming test anxiety. Content includes human development, human behavior in the environment, diversity, addictions, assessment and diagnosis, treatment planning, clinical interventions, case management, and professional values and ethics. The 170 questions contained in the full-length practice test with answers and rationales mirror the exam in length, structure, and content. These are unique questions, distinct from those in the author's companion study guide, that serve as a valuable diagnostic tool to improve exam success. With in-depth rationales and specific strategies for correctly answering each question, this resource helps social workers identify gaps in knowledge and errors in problem solving. Knowledge domains are grouped together so test-takers can identify the specific content area and competency being tested--a valuable asset for increasing understanding. In addition, the Knowledge, Skills, and Abilities statements (KSAs) are identified for each question, so test-takers can easily locate relevant source materials for further study. Tips for reading the questions, avoiding common

pitfalls, and other valuable test-taking strategies, including an assessment of learning styles, add to this book's value as a highly useful resource and diagnostic tool. ASWB is a registered service mark of the Association of Social Work Boards, which neither sponsors nor endorses this product.

ACLS Study Guide - E-Book

The Complementary Therapist's Guide to Conventional Medicine is a unique textbook for students and practitioners of complementary medicine, offering a systematic comparative approach to Western and Eastern medicine. Practitioners of complementary medicine increasingly find themselves working alongside conventionally trained doctors and nurses and it is vital for them to develop a core understanding of conventional medical language and philosophy. The book is designed as a guide to understanding conventional medical diagnoses, symptoms and treatments, whilst also encouraging the reader to reflect on and translate how these diagnoses may be interpreted from a more holistic medical perspective. Throughout the text the practitioner/student is encouraged to see that conventional and more holistic interpretations are not necessarily contradictory, but instead are simply two different approaches to interpreting the same truth, that truth being the patient's symptoms. After introductory sections on physiology, pathology and pharmacology, there follow sections devoted to each of the physiological systems of the body. In these, the physiology of each system is explored together with the medical investigation, symptoms and treatments of the important diseases which might affect that system. As each disease is described, the reader is encouraged to consider the corresponding Chinese medical perspective. The textbook concludes with chapters relating specifically to dealing with patients in practice. In particular these focus on warning signs of serious disease, supporting patients on medication and ethical issues which may arise from management of patients which is shared with conventional practitioners. The book also offers a detailed summary of 'Red Flag symptoms' which are those which should be referred for 'Western' medical investigation or emergency medical treatment, and also a guide to how patients can be safely supported in withdrawing from conventional medication, when this is clinically appropriate. Those wishing to use the text for systematic study can make use of the question and problem-solving approach offered on the accompanying CD to which references to self study exercises appear at regular stages throughout the book. This means that the text can be easily adapted to form the basis of a study course in clinical medicine for students of complementary medicine. In addition to the self-testing questions and answers, the supporting CD also contains checklists for revision and full-colour illustrations.

ABOUT THE AUTHOR Clare Stephenson is a qualified medical practitioner who worked in hospital medicine, general practice and public health medicine for a number of years before training in Traditional Chinese Medicine (TCM) and acupuncture. Over the course of a decade she developed and taught an undergraduate course for students of Chinese medicine on Western medicine and how it relates to TCM. She is particularly committed to encouraging communication and understanding between practitioners of different health disciplines. She currently works as a GP in Oxfordshire.

The third edition of this popular reader reflects considerable changes. The framework for understanding theory as a set of conversations over time is maintained and deepened, but Volume II now begins with a focus on key transitional theorists who helped reconceive of classical theory in new ways. Extending from the classical tradition, chapters on race, gender, culture, media and globalization show how contemporary theory builds on the past even as it moves in new directions. New contextual and biographical materials surround the primary readings, and each chapter includes a study guide with key terms, discussion questions, and innovative classroom exercises. The result is a fresh and expansive take on social theory that foregrounds a plurality of perspectives and reflects contemporary trends in the field, while being an accessible and manageable teaching tool.
