General Studies Paper I

University Physics is designed for the two- or three-semester calculus-based physics course. The text has been developed to meet the scope and sequence of most university physics courses and provides a foundation for a career in mathematics, science, or engineering. The book provides an important opportunity for students to learn the core concepts of physics and understand how those concepts apply to their lives and to the world around them. Due to the comprehensive nature of the material, we are offering the book in three volumes for flexibility and efficiency.

Coverage and Scope Our University Physics textbook adheres to the scope and sequence of most two- and three-semester physics courses nationwide. We have worked to make physics interesting and accessible to students while maintaining the mathematical rigor inherent in the subject. With this objective in mind, the content of this textbook has been developed and arranged to provide a logical progression from fundamental to more advanced concepts, building upon what students have already learned and emphasizing connections between topics and between theory and applications. The goal of each section is to enable students not just to recognize concepts, but to work with them in ways that will be useful in later courses and future careers. The organization and pedagogical features were developed and vetted with feedback from science educators dedicated to the project.

Literary Nonfiction. Art. Hybrid Genre. The work of Bronx native Rochelle Feinstein is deeply informed by abstraction, while also conveying a keen sensibility to contemporary culture, particularly to our everyday use of language. Over the span of the last four decades, Feinstein has probed the relevance of the abstract painting tradition vis-a-vis a rapidly changing cultural environment. She has used the lexicon of abstract painting to approach subjects of both personal and social import such as the televised police pursuit of OJ Simpson (El Bronco, 1994); the Iraq war (Hotspots, 2003-2016), and the economic

downturn of 2008 (The Estate of Rochelle F., 2010). PLS. REPLY intends to give readers a broad scope of Feinstein's ongoing engagement with the subject, whether in magazine articles, personal writing, conference presentations, school assignments, or exhibition proposals. Co-published with The Bronx Museum of the Arts and Stellar Projects. 16 full color plates. Letterpressed covers and bookmark.

Wisdom and inspiration from India's best-loved president My India: Ideas for the Future is a collection of excerpts from Dr A.P.J. Abdul Kalam's speeches in his post-presidency years. Drawn from Dr Kalam's addresses to parliaments, universities, schools and other institutions in India and abroad, they include his ideas on science, nation-building, poverty, compassion and self-confidence. Dr Kalam draws on the lives of stalwarts such as Marie Curie and Dr Vikram Sarabhai to encourage and inspire his young readers. Through these speeches, he shares many valuable lessons in humility, resilience and determination, and leads children to think, grow and evolve. A project very close to his heart, Dr Kalam's last book for children is a road map for every child to pursue their dreams, to be the best they can be, leading to the realization of a better India.

Coordinate Geometry

Chemical nomenclature has attracted attention since the beginning of chemistry, when the need to exchange knowledge was first recognised. The responsibility for providing nomenclature to the chemical community was assigned to the International Union of Pure and Applied Chemistry, whose Rules for Inorganic Nomenclature were published and revised in 1958 and 1970. Since then many new compounds have appeared, particularly with regard to coordination chemistry and boron chemistry, which were difficult to name using the 1970 Rules. Consequently, the IUPAC Commission on the Nomenclature of Inorganic Chemistry decided to thoroughly revise the last edition of the 'Red Book'. As many of the new fields of chemistry are very highly specialised and require complex nomenclature, the revised edition is in two parts. Whilst Part I is mainly concerned with general inorganic chemistry, this volume, Part II, addresses such diverse chemistry as polyanions, isotopic modification, tetrapyrroles, nitrogen hydrides, inorganic ring, chain, polymer, and graphite intercalation compounds. The recommendations bring order to the nomenclature of these specialised systems, based on the fundamental nomenclature described in Part I and the organic nomenclature publications. Each chapter has been subject to extensive review by members of IUPAC and practising chemists in various areas.
