Rural Living

Air Force Manual

A reference for homeowners on appliance and home-electronics repairs.

The Water Heater Workbook

This 'Non-Domestic Heating, Cooling and Ventilation Compliance Guide' provides guidance on the means of complying with the requirements of Part L for conventional space heating systems, hot water systems, cooling and ventilation systems in non-domestic buildings. It sets out the minimum provisions for: efficiency of the plant that generates heat, hot water or cooling; controls to ensure that the system is not generating heat, hot water or cooling unnecessarily or excessively; other factors affecting the safety or energy efficiency of the system; insulation of pipes and ducts serving space heating, hot water and cooling systems; and acceptable specific fan power ratings for fans serving air distribution systems. The guide also provides a set of additional measures which may improve the efficiency of the plant: these are non-prescriptive and may be either required or optional depending on the type of plant.

CEA Electric Water Heating Manual

Take the guesswork out of plumbing repair and installation for old and new systems. Projects include replacing faucets, unclogging drains, installing a tub, replacing a water heater, and much more. 500 illustrations and diagrams.

Home Energy Manual

A large majority of homes in the US have a storage-type water heater that provides domestic hot water. These water heaters can be electric or gas-fired and require regular maintenance and servicing. This training module covers the installation, maintenance, and service of residential and light commercial gas and electric storage water heaters. This manual provides students and practicing technicians with the information and knowledge necessary to understand typical operation of both gas and electric water heaters. It is full of color illustrations and includes end of lesson review questions that provide students and practicing technicians with the information and knowledge necessary to accurately and safely install, service, and maintain storage-type water heaters. Main topics include: safety and hazard awareness, sizing, components and controls, installation, maintenance and troubleshooting. The end of the booklet contains fill-in-the-blank worksheets that review the content of the entire manual.

Plumber's Licensing

We are in a power crunch and you need help. It is not going to go away. Fuel costs, population increases, or the need to reduce air pollution will all keep us in a power hungry situation. Either we cannot afford it, can no longer breathe it, or there will not be enough. The purpose of this book is to ease the problem. Better start learning now. Experience is the best teacher, but you need help before you can acquire experience on your own. Next best is to benefit from

another's experience. This book collects the relevant material from most of the authors' over 50 books. They were written for people who want to help themselves. Does that include you? This book contains over 50 years of ways we have used to conserve energy. We started early: The message of energy shortages to come wasn't widely publicized, although it's coming was announced and published in the 1950's. We hope that rolling blackouts are the most with which we will have to cope. In today's culture, even that is a minor disaster. Electricity is the hinge upon which our lives swing. Most of us can't even tell time without electricity, or when it comes back on, how do we reset the clocks? In fact, every floating automatic device in the house will need resetting. We depend upon electricity for all the niceties of living. What about the necessities? Food Preservation and Spoilage Heat Light- both to see and for security Water-. No hot water without electricity. City and Rural water is supplied by electric pumps. Enjoy air conditioning? A hot tub, Hot water? These are things we can live without if we must, although there are energy efficient ways to have these things. Otherwise, either the cost of having them or the need to use a minimum of electricity may make them unavailable. Solar Energy will heat your home and provide hot water. It will even heat a hot tub. We use what is in this book ALL the time.
