Richard Soloway offers a compelling and authoritative study of the relationship of the eugenics movement to the dramatic decline in the birthrate and family size in twentieth-century Britain. Working in a tradition of hereditarian determinism which held fast to the premise that "like tends to beget like," eugenicists developed and promoted a theory of biosocial engineering through selective reproduction. Soloway shows that the appeal of eugenics to the middle and upper classes of British society was closely linked to recurring concerns about the relentless drop in fertility and the rapid spread of birth control practices from the 1870s to World War II. *Demography and Degeneration* considers how differing scientific and pseudoscientific theories of biological inheritance became popularized and enmeshed in the prolonged, often contentious national debate about "race suicide" and "the dwindling family." Demographic statistics demonstrated that birthrates were declining among the better-educated, most successful classes while they remained high for the poorest, least-educated portion of the population. For many people steeped in the ideas of social Darwinism, eugenicist theories made this decline all the more alarming: they feared that falling birthrates among the "better" classes signified a racial decline and degeneration that might prevent Britain from successfully negotiating the myriad competitive challenges facing the nation in the twentieth century. Although the organized eugenics movement remained small and elitist throughout most of its history, this study demonstrates how pervasive eugenic assumptions were in the middle and upper reaches of British society, at least until World War II. It also traces the important role of eugenics in the emergence of the modern family planning movement and the formulation of population policies in the interwar years.

Miscellanea Palatina; consisting of Genealogical Essays illustrative of Cheshire and Lancashire Families, and of a Memoir on the Cheshire Domesday Roll, etc. (Additions and Index to the Miscellanea Palatina, etc.).

Stig Kanger (1924-1988) made important contributions to logic and formal philosophy. Kanger's most original achievements were in the areas of general proof theory, the semantics of modal and deontic logic, and the logical analysis of the concept of rights. But he contributed significantly to action theory, preference logic and the theory of measurement as well. This is the second of two volumes dedicated to the work of Stig Kanger. The first volume is a complete collection of Kanger's philosophical papers. The present volume contains critical essays on the various aspects of Kanger's work as well as some biographical sketches. Lennart Åqvist, Jan Berg, Brian Chellas, Anatoli Degtyarev, Lars Gustafsson, Sören Halldén, Kaj Børge Hansen, Sven Ove Hansson, Risto Hilpinen, Jaakko Hintikka, Ghita Holmström-Hintikka, Lars Lindahl, Sten Lindström, Ingmar Pörn, Dag Prawitz, Wlodek Rabinowicz, Krister Segerberg, Amartya Sen, Sören Stenlund, Göran Sundholm, and Andrei Voronkov have contributed to this volume.
