When we think of literature and film about farm workers, *The Grapes of Wrath* may come to mind, but *Farm Worker Futurism* reveals that the historical role

of technology, especially new media, has in fact had much more to do with depicting the lives of farm laborers—Mexican migrants in particular—in the United States. From the late 1940s, when Ernesto Galarza led a strike in the San Joaquin Valley, to the early 1990s, when the United Farm Workers (UFW) helped organize a fast in solidarity with janitors at Apple Computers in the Santa Clara Valley, this book explores the friction between agribusiness and farm workers through the lens of visual culture. Marez looks at how the appropriation of photography, film, video, and other media technologies expressed a “farm worker futurism,” a set of farm worker social formations that faced off against corporate capitalism and government policies. In addition to drawing fascinating links between the worlds envisioned in UFW videos on the one hand and visions of Cold War geopolitics on the other, he demonstrates how union cameras and computer screens put the farm worker movement in dialogue with futurist thinking and speculative fictions of all sorts, including the films of George Lucas and the art of Ester Hernandez. Finally Marez examines the legacy of farm worker futurism in recent cinema and literature, contemporary struggles for immigrant rights, management–labor conflicts in computer hardware production, and the antiprison movement. In contrast with cultural histories of technology that take a top-down perspective, *Farm Worker Futurism* tells the story from below, showing how working-class people of color have often been early adopters and imaginative users of new media. In doing so, it presents a completely novel analysis of speculative fiction’s engagements with the farm worker movement in ways that illuminate both.

Tom Swift and His Translocation Matrix

West's Southern Reporter

The third novel in this series. Sadly, Tom Swift has given up on the governments of the world. After fifty years of trying to help mankind and being instrumental in setting up colonies on Venus, Mars, and numerous moons throughout the outer solar system, he and ten thousand colonist, family and former employees have left the home system forever. Their destination has been to explore the Pleiades star constellation with hopes of locating a new, human-friendly home planet. Along with them are the remnants of the dinosaur race he once thought of as his "space friends." The uneasy peace between them is softened by the fact their Prime Leader is a human. The only problem is that his bride, Phyllis Newton, is the human who has become the Prime Leader of the dinosaurs. She and their asteroid ship start out for the same place as Tom and his more conventional ship, but they soon are separated by millions of light years, and even by the sum total of time itself. As each group encounters new beings and new challenges, they find the universe is a pretty hostile place to be.

By the middle of this century, we will have nine billion people to feed and nobody who wants to be a farmer. From climate change to pollution, from controversies over GMOs to shrinking water supplies, our current system of feeding the planet is breaking down, delivering less nutritious food to fewer people, making both food insecurity and food waste increasingly commonplace. While the problem is clear, the solutions have been more difficult to recognize. Now, thanks to Caleb Harper and his Open Ag initiative, a revolution in agriculture is taking place. Inspired to rethink the fundamentals of farming during a visit to Japan in the wake of the Fukushima nuclear disaster, Caleb returned to the MIT Media Lab and started growing lettuce in Dixie cups. While his peers were focused on self-driving cars and robots, Caleb was building an entire farm in the basement of the Media Lab. In the perfectly controlled conditions of his farm, he was able to carefully monitor all the variables that affect a plant's growth and health - water, light, CO₂, nutrients, temperature. Using machine learning to analyze the vast amount of data being collecting, he created "climate recipes" for growing the healthiest, tastiest, most sustainable produce in history, anywhere in the world. With the invention of a 'personal food computer'/grow-box that he has shared with school children and scientists across the globe, Caleb Harper has laid the foundation for an entirely new model of food production with limitless possibilities. Fascinating, revelatory, and filled with groundbreaking research and ideas, this book shows how the power of one man's determination and vision are revolutionizing how we will plant, grow, and consume food now and far into the future.

The Future is Abundant

Three unassailable facts will strike you as soon as you start to read *The Future of Innovation*: • One: innovation is the new mantra; whether you're involved in teaching art and design, new product development for a blue chip consumer brand or responsible for providing public services to citizens; • Two: understanding innovation requires multiple perspectives; from culture and mindset, social and commercial context, new ways of working as much as new products or services; • Three: innovation is a journey; drawing on insights from around the globe is essential to accelerate our progress. Bettina von Stamm and Anna Trifilova have gathered together the thoughts and ideas of over 200 of the most creative innovators from business, professional practice and academia from nearly 60 countries. The contributors look at innovation from almost every angle. Their statements offer an unparalleled view of innovation and provide a depth of insight that is extraordinary. The editors' reflection on each statement and on the sections within the book, provide useful links between

themes and reinforce the relationships between many of the ideas. Anyone interested in innovation (student, researcher or practitioner) will benefit from this global thought collection. The contributors' multiple perspectives, models, practical examples and stories provide a sense of innovation that no single writer could ever capture. The Future of Innovation is supported by the website www.thefutureofinnovation.org, where you can find even more contributions and tools that enable you to exchange, expand, elaborate and develop your perspectives on the future of innovation.

Sowing the seeds for our future

Brands & Their Companies 28 V3 Supplement

This lively and colorfully illustrated book documents Wisconsin folk traditions in the 1990s: building Harley motorcycles and Ojibwe birch bark canoes; gatherings at neighborhood taverns, polka dances, the Mexican neighborhood store, or the sturgeon-spearing shanties on Lake Winnebago; working on a dairy farm or at a lakeside fish market; brokering a Hmong marriage or restoring the Dickeyville Grotto; and "cheeseheads" tailgating at Lambeau field before a Green Bay Packers football game. Written for a general readership by folklorists, cultural anthropologists, and historians, this book resulted

from the Wisconsin Folklife Festivals staged by the Smithsonian Institution in Washington, D.C., and by the Wisconsin Arts Board in Madison, Wisconsin, in honor of the 1998 Wisconsin Sesquicentennial."
