Interspecies Politics

Predicasts F & S Index Europe Annual

An ecological and anthropological study of eating offers insight into food consumption in the twenty-first century, explaining how an abundance of unlimited food varieties reveals the responsibilities of everyday consumers to protect their health and the environment. By the author of *The Botany of Desire*. 125,000 first printing.

The Cultural Politics of Food, Taste and Identity

Parliamentary Debates (Hansard).

This work deals with international marketing and is intended to help readers develop their intercultural skills. The cultural variable is of prime importance in that it impacts upon communication, business, negotiation, consumer needs and attitudes, and finally the design and implementation of marketing strategies. The book proceeds by comparing national marketing systems and local commercial

customs in various countries, emphasizing what is country-specific and what is universal. There follows an exploration of the interaction between business people, buyers and sellers who have different national/cultural backgrounds. Written from a European perspective, this second edition contains more on cultural issues, especially religion and values, and includes new chapters on cross-cultural consumer behaviour, and the cultural aspects of religious integration (eg EU, N. America, SE Asia and Eastern Europe.)

The Global Guide to Animal Protection

With chapters on food, water, energy, the politics of consumption and redefining the good life, Worldwatch's award-winning research team asks whether a less-consumptive society is possible—and then argues that it is essential.

State of the World 2004

Farm animals have been disappearing from our fields as the production of food has become a global industry. We no longer know for certain what is entering the food chain and what we are eating – as the UK horsemeat scandal demonstrated. We are reaching a tipping point as the farming revolution threatens our countryside, health and the quality of our food wherever we live in the world. Farmageddon is a fascinating and terrifying investigative journey behind the closed doors of a runaway industry across the world – from the UK, Europe and the USA, to China, Argentina, Peru and Mexico. It is both a wake-up call to change our current food production and eating practices and an attempt to find a way to a better farming future.

Produce News

In the tradition of Cod and Olives: a fascinating journey into the hidden history, culture, and commerce of caviar. Once merely a substitute for meat during religious fasts, today caviar is an icon of luxury and wealth. In Caviar, Inga Saffron

tells, for the first time, the story of how the virgin eggs of the prehistoric-looking, bottom-feeding sturgeon were transformed from a humble peasant food into a czar's delicacy—and ultimately a coveted status symbol for a rising middle class. She explores how the glistening black eggs became the epitome of culinary extravagance, while taking us on a revealing excursion into the murky world of caviar on the banks of the Volga River and Caspian Sea in Russia, the Elbe in Europe, and the Hudson and Delaware Rivers in the United States. At the same time, Saffron describes the complex industry caviar has spawned, illustrating the unfortunate consequences of mass marketing such a rare commodity. The story of caviar has long been one of conflict, crisis, extravagant claims, and colorful characters, such as the Greek sea captain who first discovered the secret method of transporting the perishable delicacy to Europe, the canny German businessmen who encountered a wealth of untapped sturgeon in American waters, the Russian Communists who created a sophisticated cartel to market caviar to an affluent Western clientele, the dirt-poor poachers who eked out a living from sturgeon in the aftermath of the Soviet collapse and the “caviar Mafia” that has risen in their wake, and the committed scientists who sacrificed their careers to keep caviar on our tables. Filled with lore and intrigue, Caviar is a captivating work of culinary, natural, and cultural history.

Business 2.0

Global Business Today

By 2050, we will have ten billion mouths to feed in a world profoundly altered by environmental change. How can we meet this challenge? In *How to Feed the World*, a diverse group of experts from Purdue University break down this crucial question by tackling big issues one-by-one. Covering population, water, land, climate change, technology, food systems, trade, food waste and loss, health, social buy-in, communication, and, lastly, the ultimate challenge of achieving equal access to food, the book reveals a complex web of factors that must be addressed in order to reach global food security. *How to Feed the World* unites contributors from different perspectives and academic disciplines, ranging from agronomy and hydrology to agricultural economy and communication. Hailing from Germany, the Philippines, the U.S., Ecuador, and beyond, the contributors weave their own life experiences into their chapters, connecting global issues to our tangible, day-to-day existence. Across every chapter, a similar theme emerges: these are not simple problems, yet we can overcome them. Doing so will require cooperation between farmers, scientists, policy makers, consumers, and many others. The resulting collection is an accessible but wide-ranging look at the modern food

system. Readers will not only get a solid grounding in key issues, but be challenged to investigate further and contribute to the paramount effort to feed the world.

The Performance Economy

This book explores the ways that international politics is a form of interspecies politics, one that involves the interactions, ideas, and practices of multiple species, both human and nonhuman, to generate differences and create commonalities. While we frequently think of having an international politics "of" the environment, a deep and thoroughgoing anthropocentrism guides our idea of what political life can be, which prevents us from thinking about a politics "with" the environment. This anthropocentric assumption about politics drives both ecological degradation and deep forms of interhuman injustice and hierarchy. Interspecies Politics challenges that assumption, arguing that a truly ecological account of interstate life requires us to think about politics as an activity that crosses species

lines. It therefore explores a postanthropocentric account of international politics, focusing on a series of cases and interspecies practices in the American borderlands, ranging from the US-Mexico border in southern Texas, to Guantánamo Bay in Cuba, to Isle Royale, near the US-Canadian border. The book draws on international relations, environmental political theory, anthropology, and animal studies, to show how key international dimensions of states--sovereignty, territory, security, rights--are better understood as forms of interspecies assemblage that both generate new forms of multispecies inclusion, and structure forms of violence and hierarchy against human and nonhuman alike.

International Management

Marketing Across Cultures

The Cultural Politics of Food, Taste and Identity examines the social, cultural and political processes that shape the experience of taste. The book positions flavour as involving all the senses, and describes the multiple ways in which taste becomes tied to local, translocal, glocal and cosmopolitan politics of identity. Global case studies are included from Japan, China, Guatemala, Italy and France. Chapters examine local responses to industrialized food and the heritage industry,

including reactions to dashi, sushi, tea and cheese, and look at how professional culinary practice has become foundational for local identities. The book also discusses the unfolding construction of 'local taste' in the context of global, local and transnational sociocultural developments, and addresses how cultural political divides are created between meat consumption and vegetarianism, innovation and tradition, heritage and social class, popular food and authenticity, and street and restaurant food. In addition, contributors discuss how different food products-such as foie gras, kimchi, quinoa and Soylent-have entered the international market of industrial and heritage foods, connecting different places and shaping taste and political identities.

Chocolate Cities

Exploring a much neglected area, the relationship between food and nationalism, this book examines a number of case studies at various levels of political analysis to show how useful the food and nationalism axis can be in the study of politics.

State of the World, 2004

This updated and revised edition outlines strategies and models for how to use technology and knowledge to improve performance, create jobs and increase

income. It shows what skills will be required to produce, sell and manage performance over time, and how manual jobs can contribute to reduce the consumption of non-renewable resources.

Asian Hotel & Catering Times

When you think of a map of the United States, what do you see? Now think of the Seattle that begot Jimi Hendrix. The Dallas that shaped Erykah Badu. The Holly Springs, Mississippi, that compelled Ida B. Wells to activism against lynching. The Birmingham where Martin Luther King, Jr., penned his most famous missive. Now how do you see the United States? *Chocolate Cities* offers a new cartography of the United States—a “Black Map” that more accurately reflects the lived experiences and the future of Black life in America. Drawing on cultural sources such as film, music, fiction, and plays, and on traditional resources like Census data, oral histories, ethnographies, and health and wealth data, the book offers a new perspective for analyzing, mapping, and understanding the ebbs and flows of the Black American experience—all in the cities, towns, neighborhoods, and communities that Black Americans have created and defended. Black maps are consequentially different from our current geographical understanding of race and place in America. And as the United States moves toward a majority minority society, *Chocolate Cities* provides a broad and necessary assessment of how racial and ethnic minorities make and change America’s social, economic, and political

landscape.

Predicasts F & S Index Europe

Paul Shapiro gives you a front-row seat for the wild story of the race to create and commercialize cleaner, safer, sustainable meat—real meat—without the animals. From the entrepreneurial visionaries to the scientists' workshops to the big business boardrooms—Shapiro details that quest for clean meat and other animal products and examines the debate raging around it. Since the dawn of Homo sapiens some quarter million years ago, animals have satiated our species' desire for meat. But with a growing global population and demand for meat, eggs, dairy, leather, and more, raising such massive numbers of farm animals is woefully inefficient and takes an enormous toll on the planet, public health, and certainly the animals themselves. But what if we could have our meat and eat it, too? The next great scientific revolution is underway—discovering new ways to create enough food for the world's ever-growing, ever-hungry population. Enter clean meat—real, actual meat grown (or brewed!) from animal cells—as well as other clean foods that ditch animal cells altogether and are simply built from the molecule up. Whereas our ancestors domesticated wild animals into livestock, today we're beginning to domesticate their cells, leaving the animals out of the equation. From one single cell of a cow, you could feed an entire village. And the story of this coming “second domestication” is anything but tame.

Farmageddon

An inside look at the complex and controversial debates surrounding foie gras Who cares about foie gras? As it turns out, many do. In the last decade, this French

delicacy—the fattened liver of ducks or geese that have been force-fed through a tube—has been at the center of contentious battles between animal rights activists, artisanal farmers, industry groups, politicians, chefs, and foodies. In *Contested Tastes*, Michaela DeSoucey takes us to farms, restaurants, protests, and political hearings in both the United States and France to reveal why people care so passionately about foie gras—and why we should care too. Bringing together fieldwork, interviews, and materials from archives and the media on both sides of the Atlantic, DeSoucey offers a compelling look at the moral arguments and provocative actions of pro- and anti-foie gras forces. She combines personal stories with fair-minded analysis of the social contexts within which foie gras is loved and loathed. From the barns of rural southwest France and the headquarters of the European Union in Brussels, to exclusive New York City kitchens and the government offices of Chicago, DeSoucey demonstrates that the debates over foie gras involve heated and controversial politics. Her rich and nuanced account draws our attention to the cultural dynamics of markets, the multivocal nature of "gastropolitics," and the complexities of what it means to identify as a "moral" eater in today's food world. Investigating the causes and consequences of the foie gras wars, *Contested Tastes* illuminates the social significance of food and taste in the twenty-first century.

The Third Plate

The riveting story of the entrepreneurs and renegades fighting to bring lab-grown meat to the world. The trillion-dollar meat industry is one of our greatest environmental hazards; it pollutes more than all the world's fossil-fuel-powered cars. Global animal agriculture is responsible for deforestation, soil erosion, and more emissions than air travel, paper mills, and coal mining combined. It also, of course, depends on the slaughter of more than 60 billion animals per year, a number that is only increasing as the global appetite for meat swells. But a band of doctors, scientists, activists, and entrepreneurs have been racing to end animal agriculture as we know it, hoping to fulfill a dream of creating meat without ever having to kill an animal. In the laboratories of Silicon Valley companies, Dutch universities, and Israeli startups, visionaries are growing burgers and steaks from microscopic animal cells and inventing systems to do so at scale--allowing us to feed the world without slaughter and environmental devastation. Drawing from exclusive and unprecedented access to the main players, from polarizing activist-turned-tech CEO Josh Tetrick to lobbyists and regulators on both sides of the issue, Billion Dollar Burger follows the people fighting to upend our food system as they butt up against the entrenched interests fighting viciously to stop them. The stakes are monumentally high: cell-cultured meat is the best hope for sustainable food production, a key to fighting climate change, a gold mine for the companies that make it happen, and an existential threat for the farmers and meatpackers that make our meat today. Are we ready?

Clean Meat

Billion Dollar Burger

A global history of restaurants beyond white tablecloths and maître d's, Dining Out presents restaurants both as businesses and as venues for a range of human experiences. From banquets in twelfth-century China to the medicinal roots of French restaurants, the origins of restaurants are not singular—nor is the history this book tells. Katie Rawson and Elliott Shore highlight stories across time and place, including how chifa restaurants emerged from the migration of Chinese workers and their marriage to Peruvian businesswomen in nineteenth-century Peru; how Alexander Soyer transformed kitchen chemistry by popularizing the gas stove, pre-dating the pyrotechnics of molecular gastronomy by a century; and how Harvey Girls dispelled the ill repute of waiting tables, making rich lives for themselves across the American West. From restaurant architecture to technological developments, staffing and organization, tipping and waiting table, ethnic cuisines, and slow and fast foods, this delectably illustrated and profoundly informed and entertaining history takes us from the world's first restaurants in Kaifeng, China, to the latest high-end dining experiences.

Contested Tastes

Dining Out

An introduction to international business that emphasizes environmental factors, this text provides concise coverage of key global issues, including the cultural context for global business, cross-border trade and investment, the global monetary system and competition in the global environment. It is fully updated to 2002.

The Board of Trade Journal

The Omnivore's Dilemma

"Barber explores the evolution of American food from the 'first plate,' or industrially-produced, meat-heavy dishes, to the 'second plate' of grass-fed meat

and organic greens, and says that both of these approaches are ultimately neither sustainable nor healthy. Instead, Barber proposes Americans should move to the 'third plate,' a cuisine rooted in seasonal productivity, natural livestock rhythms, whole-grains, and small portions of free-range meat"--Provided by publishe

Food, National Identity and Nationalism

Raising awareness of human indifference and cruelty toward animals, The Global Guide to Animal Protection includes more than 180 introductory articles that survey the extent of worldwide human exploitation of animals from a variety of perspectives. In addition to entries on often disturbing examples of human cruelty toward animals, the book provides inspiring accounts of attempts by courageous individuals--including Jane Goodall, Shirley McGreal, Birute Mary Galdikas, Richard D. Ryder, and Roger Fouts--to challenge and change exploitative practices. As concern for animals and their welfare grows, this volume will be an indispensable

aid to general readers, activists, scholars, and students interested in developing a keener awareness of cruelty to animals and considering avenues for reform. Also included is a special foreword by Archbishop Desmond Tutu, urging readers to seek justice and protection for all creatures, humans and animals alike.
