A Contractor's Guide to the FIDIC Conditions of Contract

Delayed completion affects IT, process plant, oil and gas, civil engineering, shipbuilding and marine work contracts. In fact it affects all industries in all countries and the bigger the project, the more damage delayed completion causes to costs, to reputation and sometimes, even to the survival of the contracting parties themselves. In simple projects, time can be managed intuitively by any reasonably competent person, but complex projects cannot and a more analytical approach is necessary if the project is to succeed. Although much has been written about how to apportion liability for delay after a project has gone wrong there was, until recently, no guidance on how to manage time pro-actively and effectively on complex projects. In 2008, the CIOB embarked upon a 5-year strategy to provide standards, education, training and accreditation in time management. The first stage, this Guide to Good Practice in Managing Time in Complex Projects, sets down the process and standards to be achieved in preparing and managing the time model. As a handbook for practitioners it uses logical step by step procedures and examples from inception and risk appraisal, through design and construction to testing and commissioning, to show how an effective and dynamic time model can be used to manage the risk of delay to completion of construction projects.

Disturbing asbestos materials during construction is a serious hazard that all contractors may encounter. Because of the insidious nature of the material as a health hazard, EPA regulations require that even when a structure is to be completely demolished, asbestos (and all other hazardous materials) must be removed by a qualified contractor prior to general demolition. A construction contractor contemplating abatement work needs to ascertain regulatory applicability under one of the following: OSHA-approved state program, Federal OSHA regulations (applicable to the private sector and certain federal employees) or OSHA-approved. Construction Worksite Compliance Guide to Asbestos provides the contractors, building owners and inspectors with the current best management practices for asbestos removal and disposal methods. Packed with checklist, tables and "quick lookup" materials, this manual provides a step by step approach for identifying asbestos, complying with OSHA and EPA regulations as well as the safe disposal of asbestos. Ascertain the presence of asbestos through testing Prepare the abatement plan Submit the plan to the state, EPA or local municipality having jurisdiction Proper Waste Disposal techniques Scope of work

When all parties involved in the construction process fully understand their roles and are able to anticipate potential points of conflict, disputes and delays will be minimised. The Employer's and Engineer's Guide to the FIDIC Conditions of Contract sets out the essential administrative requirements of a FIDIC based contract by reference to the FIDIC 1999 Red Book. The obligations and duties of the Employer and the Engineer are identified and discussed. Potential pitfalls are highlighted and likely consequences pointed out. The importance of the Employer's role in the preparation of tenders, which fully reflect his requirements and duties and obligations arising in the execution of the works, is emphasised. The key role of the Engineer in the effective administration of contracts after award is examined and commentary provided. Included in the guide are a number of appendices, including model letters which will be of value to less experienced staff (particularly those whose mother-tongue is not the English language). Engineers, quantity surveyors and project managers engaged in the contractual administration of international projects using FIDIC forms of contract will find the concise guidance in simple and jargon-free language provided here invaluable. This, together with the author's earlier book, Contractor's Guide to the FIDIC Conditions of Contract - which describes the duties, rights and responsibilities of the Contractor - represents the totality of supervision, design and execution of construction projects executed under the FIDIC Conditions of Contract. This book's companion website offers invaluable resources to freely download, adapt and use: Model letters for use by the Employer Model letters for use by the Contractor Sample Interim Payment Certificate Model Form for Submissions to the Engineer Model Form of Engineer's Order for Varied Works Model Form of Daywork/Daily Record Sheets

This guide will help the contractor's staff overcome some of the difficulties encountered on a typical international contract using FIDIC forms. The majority of FIDIC-based contracts use the Red Book (Conditions of Contract for Construction), so this book concentrates on the use of those particular forms. Supplementary comments are included in Appendix C for the Yellow Book (Plant & Design-Build) recommended for use where the contractor has a design responsibility. The Contractor is represented on site by the Contractor's Representative who carries the overall responsibility for all the Contractor's on-site activities. In order to provide guidance to the Contractor's Representative and his staff, this book is divided into five sections: A summarized general review of the Red Book from the Contractor's perspective. A review of the activities and duties of the Contractor's Representative in the same clause sequencing as they appear in the Red Book. A summary of these activities and duties but arranged in order of their likely time sequence on site. This has the added intention of providing the Contractor's Representative with a means of ensuring that documents are not only properly provided to the Employer and Engineer, but most importantly that they are provided within the time limits specified in the Contract. A selection of model letters is provided which make reference to the various clauses of the contract requiring the Contractor to make submissions to the Employer or Engineer. Various appendices. The guide is not intended to be a review of the legal aspects of FIDIC-based contracts; legal advice should be obtained as and when necessary, particularly if the Contractor has little or no knowledge of the local law. Armed on site with a copy of The Contractor and the FIDIC Contract, the Contractor's Representative will be more able to avoid contractual problems rather than spend considerable time and energy resolving those problems once they have arisen.

Oftentimes cultural prohibitions thrive unchecked by the general populace eventually entering the world of "known understanding". "It is this way because it has always been this way", becomes the reflexive response to change for the dominant culture. This was certainly the case while institutional approval of human slavery existed. It was also the case when Women sought to exert their independence grasping for equality in a male-dominated world. Throughout the past three decades, members of the Gay and Lesbian community have sought freedom from hate as well as religious and societal tolerance gaining some small degree of success. A Biblical Defense Guide was researched and ultimately authored to be used as a tool for mutual understanding. Those who seek a clear understanding of the societal prohibition and oppression of cultural minorities will be well served in seeking answers outside of the known cultural understanding of "It is this way because it has always been this way". A Biblical Defense Guide will offer interesting insights to all those who seek to understand the historical, cultural, and societal prohibitions that are at work in the world today.
