Persistent Organic Pollutants (POPs): Analytical Techniques, Environmental Fate and Biological Effects

This hugely informative and wide-ranging analysis on the management of projects, past, present and future, is written both for practitioners and scholars. Beginning with a history of the discipline's development, *Reconstructing Project Management* provides an extensive commentary on its practices and theoretical underpinnings, and concludes with proposals to improve its relevancy and value. Written not without a hint of attitude, this is by no means simply another project management textbook. The thesis of the book is that 'it all depends on how you define the subject'; that much of our present thinking about project management as traditionally defined is sometimes boring, conceptually weak, and of limited application, whereas in reality it can be exciting, challenging and enormously important. The book draws on leading scholarship and case studies to explore this thesis. The book is divided into three major parts. Following an Introduction setting the scene, Part 1 covers the origins of modern project management - how the discipline has come to be what it is typically said to be; how it has been constructed - and the limitations of this traditional model. Part 2 presents an enlarged view of the discipline and then deconstructs this into its principal

elements. Part 3 then reconstructs these elements to address the challenges facing society, and the implications for the discipline, in the years ahead. A final section reprises the sweep of the discipline's development and summarises the principal insights from the book. This thoughtful commentary on project (and program, and portfolio) management as it has developed and has been practiced over the last 60-plus years, and as it may be over the next 20 to 40, draws on examples from many industry sectors around the world. It is a seminal work, required reading for everyone interested in projects and their management.

Year Book of Dermatology and Dermatological Surgery 2011 - E-Book

This is the proceedings of the selected papers presented at 2011 International Conference on Engineering Education and Management (ICEEM2011) held in Guangzhou, China, during November 18-20, 2011. ICEEM2011 is one of the most important conferences in the field of Engineering Education and Management and is co-organized by Guangzhou University, The University of New South Wales, Zhejiang University and Xi'an Jiaotong University. The conference aims to provide a high-level international forum for scientists, engineers, and students to present their new advances and research results in the field of Engineering Education and Management. This volume comprises 122 papers selected from over 400 papers originally submitted by universities and industrial concerns all over the world. The papers specifically cover the topics of Management Science and Engineering, Engineering Education and Training, Project/Engineering Management, and Other related topics. All of the papers were peer-reviewed by selected experts. The papers have been selected for this volume because of their quality and their relevancy to the topic. This volume will provide readers with a broad overview of the latest advances in the field of Engineering Education and Management. It will

also constitute a valuable reference work for researchers in the fields of Engineering Education and Management.

Issues in Nursing Research, Training, and Practice: 2011

Edition

2012 First Place AJN Book of the Year Award Winner in Nursing Research! "This is a resource for success and should be a part of any researcher's library."--Doody's Medical Reviews This book is a practical, user-friendly guide for health care researchers across multiple disciplines who are involved in intervention research. It provides all of the essential elements needed for understanding how to design, conduct, analyze, and fund intervention studies that are replicable and can withstand the scrutiny of the Institutional Review Board and peer review. Developed from an annual continuing education workshop on intervention studies conducted by Dr. Melnyk, this text is the most comprehensive body of information available on this topic. Contributors address the design of interventions that are ethically considerate and sensitive to culture, race/ethnicity, and gender, minimizing threats to external and internal validity, measurement, and budgeting. The guide explores such implementation issues as subject recruitment and retention, data management, and specialized settings, cost analysis, and explaining intervention effects. The text also guides readers in writing grant applications that fund , and addresses how to move intervention study findings into the real world. A unique addition to the book is the availability of digital examples of progress reports, final reports, and research grant applications that have received funding from the National Institutes of Health and other relevant organizations. This text is a valuable resource for all health care professionals

conducting research and for doctoral students in health care studies. Key Features: Presents the essential tools for designing, conducting, analyzing, and funding intervention studies Designed for use by health care professionals conducting intervention research Provides comprehensive, accessible guidelines for doctoral students across all health care disciplines Instructs readers on writing grant applications that fund Includes digital examples of funded research grants, progress reports, and final reports

Issues in Immunology Research: 2011 Edition

Cereal food engineering has become increasingly important in the food industry over the years, as it plays a key role in developing new food products and improved manufacturing processes. *Engineering Aspects of Cereal and Cereal-Based Products* focuses on the recent growth in cereal technology and baked foods science, reviewing the latest updates in technological developments in agricultural cultivation and processing for cereal scientists, food engineers, and students. Cereals include a vast number of biochemical entities, very diverse in composition and properties, as well as technological abilities. The text discusses cereal production, which varies according to cultural practices, type of cereal, cultivar, and region. It also addresses transportation, storage, and cereal quality—important at every phase from harvest to production. Chapters cover technological operations such as wet and dry milling and extrusion, and they address particular processing operations that are subject to improvements, including bread and confectionary baking. The text also examines malting, rice processing, breakfast

cereals, and pasta. In addition, it explores new trends in cereal-based products and the effects of processing on nutritional and functional properties of cereal products. This book discusses the basic elements of cereal technology, from production to transformation, including the most important processing operations in cereal technology, with emphasis on the engineering aspects.

Nursing and Midwifery Research

The new edition upholds the premise that knowledge about research process and design is mandatory in today's health care arena, and that all nurses and midwives need to understand research findings and their implication for changing practice. It is completely revised with many new chapters. The text has been restructured into three sections. Section 1 Research Awareness sets the scene for the importance of nursing and midwifery research and provides an overview of research theory and practice as processes. Chapters on searching for and reviewing the literature provide detailed advice for undergraduates and facilitate access to research articles online. One of the new chapters discusses ethical issues in Australia and New Zealand. Section 2 Appreciation and Application provides a detailed discussion of qualitative, quantitative and mixed methods research approaches with many useful examples from the clinical area. Section 3 Conducting primary research is new and is designed to accommodate both undergraduate and postgraduate students in their research effort. Writing research proposals may be

a requirement for undergraduates in their research program and postgraduates will find the information useful for undertaking a higher degree or applying for university or external funding. This final Section is also useful as a guide on disseminating and publishing conducted research findings. Combined Australian and New Zealand editorship ensures greater trans-Tasman coverage, awareness and relevance. Contributions from international luminaries are balanced by a heightened focus on research conducted within Australia and New Zealand. New edition conscientiously recognises midwifery research as related to but independent from nursing. The research process-driven approach is directed towards 'consumers' of research, and the comprehensive coverage extends from undergraduate through to a postgraduate level of knowledge. Expanded pedagogy includes Key Terms and Learning Outcomes at the beginning of each chapter; Icons throughout that direct readers to web-based material; Evidence-based Tips, Research in Brief boxes and Points to Ponder for constant reinforcement that links evidence to practice. Integrated Tutorial Triggers with suggested answers provided and Multiple Choice Questions enable students to assess their understanding of key points. Evolve Website provides True/False questions and access to journal articles cited in the text, with additional reflective questions. Australian adaptation of Nursing Research: Lobiondo-Wood & Haber

Fetal Growth Retardation: New Insights for the Healthcare Professional: 2011 Edition

Characterization of Semiconductor Heterostructures and Nanostructures is structured so that each chapter is devoted to a specific characterization technique used in the understanding of the properties (structural, physical, chemical, electrical etc..) of semiconductor quantum wells and superlattices. An additional chapter is devoted to ab initio modeling. The book has two basic aims. The first is educational, providing the basic concepts of each of the selected techniques with an approach understandable by advanced students in Physics, Chemistry, Material Science, Engineering, Nanotechnology. The second aim is to provide a selected set of examples from the recent literature of the TOP results obtained with the specific technique in understanding the properties of semiconductor heterostructures and nanostructures. Each chapter has this double structure: the first part devoted to explain the basic concepts, and the second to the discussion of the most peculiar and innovative examples. The topic of quantum wells, wires and dots should be

seen as a pretext of applying top level characterization techniques in understanding the structural, electronic etc properties of matter at the nanometer (and even sub-nanometer) scale. In this respect it is an essential reference in the much broader, and extremely hot, field of Nanotechnology. Comprehensive collection of the most powerful characterization techniques for semiconductors heterostructures and nanostructures Most of the chapters are authored by scientists that are world-wide among the top-ten in publication ranking of the specific field Each chapter starts with a didactic introduction on the technique The second part of each chapters deals with a selection of top examples highlighting the power of the specific technique to analyse the properties of semiconductors heterostructures and nanostructures

Issues in Cancer Epidemiology and Research: 2011 Edition

"This is a unique and needed addition to the nursing literature. Historically, the role of the nurse practitioner was focused on primary care, but as the healthcare environment has changed, so has the need for nurse practitioners in the hospital setting. This valuable resource is a wonderful guide for nurse practitioners and administrators working to successfully create this transition in their organizations." Score: 98, 5 Stars.--Doody's Medical Reviews Transitioning into Hospital Based

Practice: A Guide for Nurse Practitioners & Administrators is the first text to address the mutual issues of both NPs and administrators in successfully implementing NP practice in hospitals. This book addresses the planning, implementation, and evaluation process as well as the key factors that are critical to the success of the individual NP, and incorporates practical guidance from national NP experts. The NP recruitment, orientation, mentoring, and professional development are key to the individual and collective success of both the NP and the organization's outcomes. It is the commitment to this mutual success that sets this book apart from any other texts on this subject and makes it indispensable for students, practicing NPs, and administrators alike. Key Features: Provides concrete strategies for the NP and Administrator that support the transition from clinic to hospital-based APN practice Addresses a growing need for role identification and integration of the NP role into the hospital setting Covers the planning, implementation, and evaluation process of the hospital-based NP Focuses on the improvement of patient outcomes and cost reduction Written by national NP experts

Comprehensive, straightforward and clear, Introduction to Research Methods in Psychology, 3rd edition is the essential student guide to understanding and undertaking quantitative and qualitative research in psychology. Updated

throughout to include new topics such as the latest developments in online support for conducting research and data management, this new edition continues to provide a thorough, accessible and up to date coverage of the field. The book is supported by a companion website featuring a range of resources to help students check and further their understanding of the subject. Visit www.pearsoned.co.uk/howitt to find out more. "Howitt and Cramer's Introduction to Research Methods (Third Edition) offers the clearest and most comprehensive coverage of research methods for first year psychology students on the market. Indeed, it is a priceless source of advice and information on research design for students throughout their undergraduate career, and even into postgraduate study." Ronnie Wilson, University of Ulster

Intervention Research

This book focuses on those organic chemicals that are regulated by the Stockholm Convention on Persistent Organic Pollutants (POPs). as well as organic chemical with the attributes of being persistent, bioaccumulative, and toxic to ecosystem and human beings, criteria used by the Stockholm Convention for screening POP candidates. Because of the unfavourable properties of POPs, numerous research efforts have been directed toward investigating their input sources, fate, and effects, with the help of continuously improving analytical technologies. The contributors to this book provide an integrated assessment of existing data, which

will benefit both the scientific and management communities in planning further research projects and/or pollution control measures. Comprehensive overview of recent advances in analyzing persistent organic pollutants (POPs) Covers input sources, fate and biological effects of POPs Contains essential information for environmental management

Characterization of Semiconductor Heterostructures and Nanostructures

This book shows scientists how to apply their analysis and synthesis skills to overcoming the challenge of how to write, as well as what to write, to maximise their chances of publishing in international scientific journals. The book uses analysis of the scientific article genre to provide clear processes for writing each section of a manuscript, starting with clear 'story' construction and packaging of results. Each learning step uses practical exercises to develop writing and data presentation skills based on reader analysis of well-written example papers. Strategies are presented for responding to referee comments, and for developing discipline-specific English language skills for manuscript writing and polishing. The book is designed for scientists who use English as a first or an additional language, and for individual scientists or mentors or a class setting. In response to reader requests, the new edition includes review articles and the full range of research article formats, as well as applying the book's principles to writing funding applications.
