Private Pilot Airman Certification Standards - Airplane

The Federal Aviation Administration (FAA) administers oral as well as written exams for pilot certification and flight review. These exam guides teach applicants not only what to expect, but also how to exhibit subject mastery and confidence under the scrutiny of the FAA Examiner. In this series, the most consistent questions asked in each exam are provided in a question-and-answer format, with information sources for further study. Applicants facing the Instrument Rating oral exams will benefit from the topics discussed and the further study materials provided in this Instrument edition, which have been updated to reflect important FAA regulatory and procedural changes, including new or updated PTS technical subject areas. The Eighth Edition contains a new chapter on the currently hot FAA topic of "scenario-based training" (SBT), written by Arlynn McMahon (author of "Train Like You Fly"). It provides insight into these more-complex questions on how to demonstrate one's grasp of the practical application of flight training. Scenario-based questions are now an integral part of FAA Oral & Practical Exams, and FAA examiners are using them more and more often.

Private Pilot FAA Airmen Knowledge Test Guide

Aviation Fundamentals

The Federal Aviation Administration (FAA) has published the Private Pilot - Airplane Airman Certification Standards (ACS) document to communicate the aeronautical knowledge, risk management, and flight proficiency standards for the private pilot certification in the airplane category, single-engine land and sea; and multiengine land and sea classes. This ACS incorporates and supersedes the previous Private Pilot Practical Test Standards for Airplane, FAA-S-8081-14. The FAA views the ACS as the foundation of its transition to a more integrated and systematic approach to airman certification. The ACS is part of the safety management system (SMS) framework that the FAA uses to mitigate risks associated with airman certification training and testing. Specifically, the ACS, associated guidance, and test question components of the airman certification system are constructed around the four functional components of an SMS: Safety Policy that defines and describes aeronautical knowledge, flight proficiency, and risk management as integrated components of the airman

certification system; Safety Risk Management processes through which internal and external stakeholders identify and evaluate regulatory changes, safety recommendations and other factors that require modification of airman testing and training materials; Safety Assurance processes to ensure the prompt and appropriate incorporation of changes arising from new regulations and safety recommendations; and Safety Promotion in the form of ongoing engagement with both external stakeholders (e.g., the aviation training industry) and FAA policy divisions. The FAA has developed this ACS and its associated guidance in collaboration with a diverse group of aviation training experts. The goal is to drive a systematic approach to all components of the airman certification system, including knowledge test question development and conduct of the practical test. The FAA acknowledges and appreciates the many hours that these aviation experts have contributed toward this goal. This level of collaboration, a hallmark of a robust safety culture, strengthens and enhances aviation safety at every level of the airman certification system.
