Emergent Public Health Issues in the US-Mexico Border Region

Proceedings of the Board of Supervisors of Essex County

Proceedings of the Legislature of Orleans County

US-Mexico border region area has unique social, demographic and policy forces at work that shape the health of its residents as well as serves as a microcosm of migration health challenges facing an increasingly mobile and globalized world. This region reflects the largest migratory flow between any two nations in the world. Data from the Pew Research Center shows over the last 25 years there has never been lower than 140,000 annual immigrants from Mexico to the United

States (with peaks over 700,000). This migratory route is extremely hazardous due to natural (e.g., arid and hot desert regions) and human made barriers as well as border enforcement practices tied to socio-political and geopolitical pressures. Also, reflecting the national interdependency of public health and human services needs, during the most recent five year period surveyed the migratory flow between the US and Mexico has equaled that of the flow of Mexico to the US--both around 1.4 million persons. Of particular public health concern, within the US-Mexico region of both nations there is among the highest disparities in income, education, infrastructure and access to health care--factors within the World Health Organization's conceptualization of the Social Determinants of Health, and among the highest rates of chronic disease. For instance obesity and diabetes rates in this region are among the highest of those monitored in the world, with adult population estimates of the former over 40% and estimates in some population sub-groups for the latter over 20%. The publications reflected in this Research Topic, all reviewed from experts in the field, addressed many of the public health issues in the US Mexico Border Health Commission's Healthy Border 2020 objectives. Those objectives-- broad public health goals used to guide a diverse range of government, research and community-based stakeholders--include Non Communicable Diseases (including adult and childhood obesity-related ones; cancer), Infectious Diseases (e.g., tuberculosis; HIV; emerging diseases--particularly mosquito borne illnesses), Maternal and Child Health, Mental Health Disorders, and Motor Vehicle Accidents. Other relevant public health issues affecting this region, for example environmental health, binational health services coordination (e.g., immunization), the impact of migration throughout the Americas and globally in this region, health issues related to the physical climate, access to quality health care, discrimination/mistreatment and well-being, acculturative/immigration stress, violence, substance use/abuse, oral health, respiratory disease, and well-being from a social determinants of health framework, are critical areas addressed in these publications or for future research. Each of these Research Topic publications presented applied solutions (e.g., new programs, technology or infrastructure) and/or public health policy recommendations relevant to each public health challenge addressed.

Who's Who Among African Americans

The spirit of inquiry is the engine of democracy. The democratic process is nothing less than citizens regularly asking what kind of society they want to live in and whom they want to lead them. But more and more people are avoiding the whole messy business of questioning. Americans are instead being trained to look for ready-made answers, with potentially dire implications for the health of our society. In this impassioned new book, Andrea Batista Schlesinger argues that we're besieged by cultural forces that urge us to avoid independent thought and critical analysis. The media reduces politics to a spectator sport, focusing on polls and personalities rather than issues and ideas. Schools teach to standardized tests—students learn to fill in the bubbles, not open their minds. "Financial literacy" courses have replaced civics classes, graduating smart shoppers rather than informed citizens. Even the Internet promotes habits that discourage inquiry. Regurgitating search-engine results becomes a substitute for genuine research and reflection. Social networks promote

connection rather than engagement. With all the information available online, over a third of those younger than twenty-five say they get no news on a typical day, up from 25 percent in 1998. The situation isn't hopeless. Batista Schlesinger spotlights individuals and institutions across the country that are working to renew a healthy sense of curiosity and skepticism, particularly in American's youth. It is, at this point, an uphill battle but one well worth undertaking. The Death of "Why?" offers both a penetrating socio-cultural critique of our current path and a way forward for cultivating inquiry and reinvigorating our democracy.

Putting Consequences Back Into Juvenile Justice at the Federal, State, and Local Levels

Complex Contracting draws on core social science concepts to provide wide-ranging practical advice on how best to manage complex acquisitions. Using a strong analytical framework, the authors assess contract management practices, suggesting strategies for improvement and ways to avoid the pitfalls of managing contracts for large and sophisticated projects. An in-depth analysis of the US Coast Guard's Deepwater program is included to illustrate ways to respond to real-world contracting challenges. This high-profile and controversial case consisted of a projected 25-year, $24 billion contract through which the US Coast Guard would buy a system of new boats, aircraft, communications, and control architecture to replace its aging fleet. The authors explore the reasons why this program, launched with such promise, turned out so poorly, and apply the lessons learned to similarly complex contracting scenarios. This engaging and accessible book has broad applicability and will appeal to policymakers, practitioners, scholars and students.

Clear, proven solutions for virtual project management challenges Projects Without Boundaries offers project managers a clear framework for bringing both project management practices and project team leadership principles to the virtual space. Written by a team of authors with years of experience managing nationally and internationally distributed teams, this book provides a suite of best practices, checklists, and actionable strategies for managing a project and building a high-performing team in a virtual and multicultural environment. Real-world examples illustrate the application of the concepts discussed, and the Virtual Project Readiness Assessment facilitates both team evaluation and transformation planning for virtual project management improvement. Each chapter focuses on the critical challenges encountered while managing virtual projects and details proven solutions that improve a virtual organization, boost project performance, and facilitate positive outcomes. Globalization and technological advances have merged to create dynamic, productive teams that work together from around the globe; this opportunity can bring great difficulty for project managers, who must negotiate hurdles that do not exist on traditional projects. This book provides ready-made solutions specific to distributed and multicultural teams, to help you achieve the full potential of the global talent pool. Overcome common challenges of virtual projects with distributed teams Navigate complex team dynamics to ensure effective collaboration Work seamlessly across borders, time zones, and cultures Determine optimal virtual communication and collaboration tools Apply traditional project management practices in a virtual setting A team fails or thrives on the strength of its management. Fitting the group's needs, expectations, personalities, and skills into a cohesive whole is seldom simple — and distance adds an additional layer of complexity. Projects Without Boundaries provides expert guidance on keeping it together, with proven practices, tools, and virtual team leadership strategies.

Governments are facing a permanent fiscal crisis. The costs of running governments are rising, especially the costs to educate, incarcerate, and medicate. Consequently, government is broke. Traditional budgeting only makes matters worse. The focus (and the acrimony) settles on the small percentages to cut, but the great majority of spending escapes

examination. Budgeting for Outcomes: Better Results for the Price of Government changes this equation. It asks different questions—and gets very different answers. This e-book explains how local governments can create a budget designed to give residents the results they really want and need—at a price they are willing to pay.
