little more than rearrangement of the chapters. It takes a master like McQuarrie to go back to the drawing board and create a logical development from smallest to largest that makes sense to students."---Hal Harris, University of Missouri-St. Louis "McQuarrie's book is extremely well written, the order of topics is logical, and it does a great job with both introductory material and more advanced concepts. Students of all skill levels will be able to learn from this book."---Mark Kearley, Florida State University This new fourth edition of General Chemistry takes an atoms-first approach from beginning to end. In the tradition of McQuarrie's many previous works, it promises to be another ground-breaking text. This superb new book combines the clear writing and wonderful problems that have made McQuarrie famous among chemistry professors and students worldwide. Presented in an elegant design with all-new illustrations, it is available in a soft-cover edition to offer professors a fresh choice at an outstanding value. Student supplements include an online series of descriptive chemistry Interchapters, a Student Solutions Manual, and an optional state-of-the-art Online Homework program. For adopting professors, an Instructor's Manual and a CD of the art are also available.

Phospholipid technology and applications is an

essential reference for technologists developing food and cosmetics products, scientists researching phospholipids in biological and food systems, technologists in fats and oils refining, and scientists developing drugs and drug delivery systems and carriers. The major source of phospholipids is the lecithin recovered during degumming of vegetable oils, particularly soybean oil. This crude material finds uses in its own right but can be purified through a series of processes which eventually lead to individual phospholipid classes such as phosphatidylcholines. It is widely accepted that oil and water do not mix but there are several areas in science and technology where these two distinct phases must coexist in stable emulsions. This is achieved by admixture of amphiphilic molecules of which the phospholipids are important natural examples. Today, phospholipids find many uses in the food industry and in other industries which exploit the amphiphilic nature of these compounds. Further, there are now important procedures by which their amphiphilicity can be optimized for different uses. The early chapters in this book are devoted to the more common glycerol-based phospholipids and cover their structure, source, composition, modification by chemical and enzymatic methods, their physical, chemical, and nutritional properties, and their major uses. The final chapter is devoted to another kind of phospholipid, the sphingolipids, in which there is a growing interest.

This reimagining of the Robin Hood legend tells the story of the young boy behind the bandit hero's rise to fame. Will Shackley is the son of a lord, and though just thirteen, he's led a charmed, protected life and is the heir to Shackley House, while his father is away on the Third Crusade with King Richard the Lionheart. But with King Richard's absence, the winds of treason are blowing across England, and soon Shackley House becomes caught up in a dangerous power struggle that drives Will out of the only home he's ever known. Alone, he flees into the dangerous Sherwood Forest, where he joins an elusive gang of bandits readers will immediately recognize. How Will helps a drunkard named Rob become one of the most feared and revered criminals in history is a swashbuckling ride perfect for anyone who loves heroes, villains, and adventure.

A trace element (TE) is a chemical element presented below ~ 0.1 wt. % and required in minute quantities to maintain proper physical functioning. TE analysis in clinical samples (plasma, urine, cerebro-spinal fluid, full-term placenta, hair, nails, buccal mucosa, semen, biopsy specimens) has received increasing attention. Based on 62 sources, current effort presents comparative knowledge about the attempts to accurately trace TE in clinical samples through Vis/NIR, PIXE, TXRF, GFAAS, ICP-MS. It informs the need for further research adjustments to reveal the reciprocal states of certain TE (Cu/Zn, Ca/Mg, Fe/ Pb) in correlation with their real-time counts in both

This would help to achieve consistency in interpreting obstetrical complications (preeclampsia, prematurity, or gestational diabetes). Generated hypotheses should target plausible mechanisms behind TE alterations and their stage-sensitive measures in gynecological cancer. New prospects are discussed in management and prognosis of endometriosis and premature ovarian failure (POF).

The Shadow Cabinet

In the twenty-fourth chapter of Genesis a beautiful young woman offers assistance to a weary traveler and his camels, and out of that simple action, a marriage results—a marriage that offers profound lessons to couples today. Bible scholar and renowned speaker Ravi Zacharias draws five points critical to the long-lasting success of every marriage from the biblical story of the marriage of Isaac and Rebekah. "Real love folds together both the emotions and the will," writes Zacharias. "Without the emotions, marriage is a drudgery; without the will, it is a mockery." Building upon that foundational truth, Zacharias goes on to explain the principles of seeking the counsel of others when finding a mate, cherishing your partner, remaining pure, becoming a man or woman of prayer, and, finally, risking everything in a relationship in order to experience God's ideal for love. Couples everywhere, from those about to be married, to those who have been married for decades, will draw strength and wisdom for the journey of marriage as they learn from Ravi what it means to move from romance to lasting love.

In 1947, British India-the part of South Asia that is today's India, Pakistan, and Bangladesh-emerged from the colonial era with the world's largest centrally managed canal irrigation infrastructure. However, as vividly illustrated by Tushaar Shah, the orderly irrigation economy that saved millions of rural poor from droughts and famines is now a vast atomistic system of widely dispersed tube-wells that are

drawing groundwater without permits or hindrances. Taming the Anarchy is about the development of this chaos and the prospects to bring it under control. It is about both the massive benefit that the irrigation economy has created and the ill-fare it threatens through depleted aquifers and pollution. Tushaar Shah brings exceptional insight into a socio-ecological phenomenon that has befuddled scientists and policymakers alike. In systematic fashion, he investigates the forces behind the transformation of South Asian irrigation and considers its social, economic, and ecological impacts. He considers what is unique to South Asia and what is in common with other developing regions. He argues that, without effective governance, the resulting groundwater stress threatens the sustenance of the agrarian system and therefore the well being of the nearly one and a half billion people who live in South Asia. Yet, finding solutions is a formidable challenge. The way forward in the short run, Shah suggests, lies in indirect, adaptive strategies that change the conduct of water users. From antiquity until the 1960s, agricultural water management in South Asia was predominantly the affair of village communities and/or the state. Today, the region depends on irrigation from some 25 million individually owned groundwater wells. Tushaar Shah provides a fascinating economic, political, and cultural history of the development and use of technology that is also a history of a society in transition. His book provides powerful ideas and lessons for researchers, historians, and policymakers interested in South Asia, as well as readers who are interested in the water and agricultural futures of other developing countries and

regions, including China and Africa.

In light of the tremendous changes that have come to the island of Borneo in recent decades, this volume takes a detailed historical look at the Borneo environment from native, colonial and national perspectives. It examines change and continuity in the economic, political and social dimensions of human-environment interactions. Reflecting the increasingly multidisciplinary nature of environmental history, the book brings together an international group of historians, anthropologists, geographers and social foresters, all looking through a historical lens at the environment in the Malaysian states of Sabah and Sarawak, and the Indonesian province of Kalimantan and Brunei. Drawing on extensive archival research and fieldwork, these ten original contributions encompass eleven centuries of history on Borneo, examining interrelated topics that include long-distance trade, conservation, land tenure, resource access, property rights, perceptions of the environment, migration, and development policy and practice. The chapters in this volume are extensively revised versions of selected papers presented at an international seminar on "Environmental change in native and colonial histories of Borneo: Lessons from the past, prospects for the future" held in Leiden under the auspices of the International Institute for Asian Studies.

This study examines France's determination to remain aloof and unaffected as the world economy threatens the French way of doing business. Describing the difficulty in initiating change in French organizations, the author tells of the obstacles he encountered in attempting to modernize the working practices of a Paris firm. His observations are based upon customs and habits peculiar to the French, yet they apply equally to all foreign cultures. Management methods, attitudes to the outside world, and the historic roots of the French mentality are viewed and explained anecdotally, based on the author's experience of living and working in France, and are accompanied by humorous illustrations.

Hannah's list: Ghosts are cold to the touch. Being tied up isn't much fun. And danger is a sure-fire prescription for amazing sex! When Hannah Campbell attends a memorial service for the neurosurgeon who once saved her life, the last thing she expects is a lightning strike that knocks her out cold and blasts her lungs full of the departed's ashes. Things only get weirder when she wakes up to find the deceased standing over her hospital bed, insisting she help him track down the terrorists who blew up his plane. Professor Takeshi Shimodo doesn't know what to believe when smart-mouthed Hannah appears on his doorstep, claiming to be haunted by the ghost of his best friend. Yet she exhibits some extraordinary psychic abilities. And her determination to find justice for the crash victims, in spite of her fragile health, touches his heart. Takeshi's acupuncture techniques are meant to calm Hannah's erratic heartbeat, but the longer they are together, the more his magic fingers have the opposite effect. Soon, their passion flares hotter than any lightning strike. But now the terrorist they seek is hunting them. And the FBI is suspicious Hannah knows just a little too much. Without some "spiritual" help, they haven't a ghost of a chance. Warning, this title contains the following: explicit sex, graphic language and violence.

A traditional source of sexual titillation for adult readers, fairy tales historically boasted licentious themes before being cleaned up for the consumption of children in modern times. Seasoned erotica author Mitzi Szereto restores the explicit sex in these 15 tales — and adds some provocative surprises of her own. Here the bawdy humor of French fable meets the sublime eroticism of ancient Chinese myth; a not-so-virgin damsel weds a Prince Charming with a shoe fetish; Little Red Riding Hood discovers Grandma's bed is open to any stray wolf; and a Japanese monk stumbles onto an S/M scene behind a forbidden door. Each tale is prefaced by a brief introduction telling its history and the sexual culture in which the work was originally composed.

In the early 1980s, two water-supply systems on the Marine Corps Base Camp Lejeune in North Carolina were found to be contaminated with the industrial solvents trichloroethylene (TCE) and perchloroethylene (PCE). The water systems were supplied by the Tarawa Terrace and Hadnot Point watertreatment plants, which served enlisted-family housing, barracks for unmarried service personnel, base administrative offices, schools, and recreational areas. The Hadnot Point water system also served the base hospital and an industrial area and supplied water to housing on the Holcomb Boulevard water system (full-time until 1972 and periodically thereafter). This book examines what is known about the contamination of the water supplies at Camp Lejeune and whether the contamination can be linked to any adverse health outcomes in former residents and workers at the base.

This book teaches photographers how to connect fully with the visual richness present in their ordinary, daily experiences. According To The authors, photography is not purely a mechanical process. You need to know how to look, As well as where to point the camera, and when to press the button. Then as you develop your ability to see, your appreciation and inspiration from the world around you become enhanced. Filled with practical exercises and techniques inspired by mindfulness meditation, this book teaches photographers how to "see what's in front of them". It offers a system of training and exercises that draw

upon Buddhist concepts, As well as on insights of great photographic masters such as Alfred Stieglitz, Edward Weston, and Henri Cartier-Bresson. There is a series of visual exercises and assignments for working with texture, light, and colour, As well as for developing mindfulness, As a way of bringing the principles of contemplative photography into ordinary experience.

A simplified approach to applying the Finite Element Method to geotechnical problems Predicting soil behavior by constitutive equations that are based on experimental findings and embodied in numerical methods, such as the finite element method, is a significant aspect of soil mechanics. Engineers are able to solve a wide range of geotechnical engineering problems, especially inherently complex ones that resist traditional analysis. Applied Soil Mechanics with ABAQUS® Applications provides civil engineering students and practitioners with a simple, basic introduction to applying the finite element method to soil mechanics problems. Accessible to someone with little background in soil mechanics and finite element analysis, Applied Soil Mechanics with ABAQUS® Applications explains the basic concepts of soil mechanics and then prepares the reader for solving geotechnical engineering problems using both traditional engineering solutions and the more versatile, finite element solutions. Topics covered include: Properties of Soil Elasticity and Plasticity

The book is prepared with ABAQUS® software applications to enable a range of readers to experiment firsthand with the principles described in the book (the software application files are available under "student resources" at www.wiley.com/college/helwany). Recently Anna Julia Cooper has emerged as the most important classic writer in the tradition of African American feminist thought. Mary Helen Washington described Cooper's work as "the most precise, forceful, well-argued statement of black feminist thought to come out of the nineteenth century." This is the first collection of all of Cooper's major writings, including many never before published. It includes all of the essays from her famous book, *A Voice from the South*, in addition to many other essays and letters

accessible only in archives until now. The organization of this important new collection lends itself to a clearer understanding of the major themes and contributions of Cooper's thought, her development as a thinker and writer, and the critiques and controversies surrounding her work. Lemert and Bhan introduce Cooper as an activist, settlement founder, school teacher, college president, linguist, and scholar—a life that paralleled the prodigious accomplishments of W.E.B. Du Bois in so many ways.

Trace Elements in Obstetrics and Gynecology

In this book, Nicolas Van de Walle identifies 26 countries that are extremely poor and grew little if at all in the 1990s. His sample excludes North Korea and countries where civil war explains some of their failure to grow (Afghanistan, Sierra Leone, Sudan, Tajikistan and others). The 26 countries have limited infrastructure and human capital and the small size of their markets deter private savings and investment. Aid was meant to help overcome these problems, and these countries received a lot. Yet they have failed to grow. What is wrong? Is foreign aid a solution or part of the problem? What changes might make aid more effective? Given these countries require the financial and technical resources of the West, why haven't aid programs made a difference? Van de Walle blames their economic failure mostly on the venality and incompetence of their political leadership. He analyzes the contradictions and tensions faced by the aid community in poorly run countries, providing a sobering analysis of the perverse effects of aid where the politics is all wrong. Too often, resources provided by foreign aid keep the wrong government in office, and undermine adoption of economic as well as political reforms. Bad government combined with aid, in short, hurts poor countries - and particularly the poorest people in those countries. Despite good intentions, little progress has been made in implementing announced "reforms" of the aid business itself. A constituency for reform is lacking, in the donor countries and in the recipient countries,

where those in power benefit from the status quo.

When teaching and learning are characterized by collaboration, challenge, support, risk taking, and reflectivity, they become a transactional process. This book provides a practical guide for those involved in helping adults learn to critically examine, question, and rethink the teaching and learning encounter. The authors detail the descriptive elements, skills, and guiding principles of the transactional process, what it means to ground teaching in learning, how to individualize the teaching and learning process, and how to foster critical reflection. The book provides specific advice on adult learning methods and techniques most appropriate for facilitating the adult learning transactional process, how technology can be interactive and collaborative, numerous approaches for evaluating the teaching and learning process, and various strategies for improving instruction and resources for one's own professional development.
