The Baby-Making Bible

This is the complete guide to getting pregnant and improving fertility naturally -- even if you've been told your chances of conception are low. A nationally renowned women's health and fertility expert, Aimee Raupp has helped thousands of women optimize their fertility and get pregnant. Now, in this book, she provides her complete program for improving your chances of conceiving and overcoming infertility, including the most effective complementary and lifestyle approaches, the latest nutritional advice, and ways to prepare yourself emotionally and spiritually.

Contemporary Bioethics

Written by one of the country's leading complementary fertility specialists, The Baby-Making Bible draws together Emma Cannon's years of experience and success in treating couples hoping to get pregnant. Her special plan blends the ancient wisdom of Chinese medicine with the highest standards in Western medical practice. Whether you are trying for a natural conception or undergoing treatment for assisted conception, she offers a practical plan you can follow to create a fertile environment and encourage healthy baby-making. Emma approaches fertility in its widest context by taking you through her essential couples' health and lifestyle check, and makes suggestions to help you achieve optimum dietary, environmental and emotional health. She also offers specific advice for anyone who has been diagnosed with unexplained infertility or who is embarking on fertility treatment. The book features a foreword by Dr Tim Evans. From Neurons to Neighborhoods

Comforting and intimate, this “girlfriend” guide to getting pregnant gets to the heart of all the emotional issues around having children—biological pressure, in-law pressures, greater social pressures—to support women who are considering getting pregnant. Trying to get pregnant is enough to make any woman impatient. *The Impatient Woman’s Guide to Getting Pregnant* is a complete guide to the medical, psychological, social, and sexual aspects of getting pregnant, told in a funny, compassionate way, like talking to a good friend who’s been through it all. And in fact, Dr. Jean Twenge has been through it all—the mother of three young children, she started researching fertility when trying to conceive for the first time. A renowned sociologist and professor at San Diego State University, Dr. Twenge brought her research background to the huge amount of information—sometimes contradictory, frequently alarmist, and often discouraging— that she encountered online, from family and friends, and in books, and decided to go into the latest studies to find out the real story. The good news is: There is a lot less to worry about than you’ve been led to believe. Dr. Twenge gets to the heart of the emotional issues around getting pregnant, including how to prepare mentally and physically when thinking about conceiving; how to talk about it with family, friends, and your partner; and how to handle the great sadness of a miscarriage. Also covered is how to know when you’re ovulating, when to have sex, timing your pregnancy, maximizing your chances of getting pregnant, how to tilt the odds toward having a boy or a girl, and the best prenatal diet. Trying to conceive often involves an enormous amount of emotion, from anxiety and disappointment to hope and joy. With comfort, humor, and straightforward advice, *The Impatient Woman’s Guide to Getting Pregnant* is the bedside companion to help you through it.

How to Get Pregnant Fast

A practical and evidence-backed approach for improving egg quality and fertility—fully revised and updated in 2019. The latest scientific research reveals that egg quality has a powerful impact on how long it takes to get pregnant and the risk of miscarriage. Poor egg quality is in fact the single most important cause of age-related infertility, recurrent miscarriage, and failed IVF cycles. Based on a vast array of scientific research, *It Starts with the Egg* provides a comprehensive program for improving egg quality in three months, with specific advice tailored to a variety of fertility challenges— including endometriosis, unexplained infertility, diminished ovarian reserve, PCOS, and recurrent miscarriage. With concrete strategies such as minimizing exposure to common toxins, choosing the right vitamins and supplements to safeguard developing eggs, and harnessing nutritional advice shown to boost IVF success rates, this book offers practical solutions that will help you get pregnant faster and deliver a healthy baby.

The Impatient Woman's Guide to Getting Pregnant

Within twenty, maybe forty, years most people in developed countries will stop having sex for the purpose of reproduction. Instead, prospective parents will be told as much as they wish to know about the genetic makeup of dozens of embryos, and they will pick one or two for implantation, gestation, and birth. And it will be safe, lawful, and free. In this work of prophetic scholarship, Henry T. Greely

explains the revolutionary biological technologies that make this future a seeming inevitability and sets out the deep ethical and legal challenges humanity faces as a result. "Readers looking for a more in-depth analysis of human genome modifications and reproductive technologies and their legal and ethical implications should strongly consider picking up Greely's *The End of Sex and the Future of Human Reproduction*[It has] the potential to empower readers to make informed decisions about the implementation of advancements in genetics technologies." —Dov Greenbaum, *Science* "[Greely] provides an extraordinarily sophisticated analysis of the practical, political, legal, and ethical implications of the new world of human reproduction. His book is a model of highly informed, rigorous, thought-provoking speculation about an immensely important topic." —Glenn C. Altschuler, *Psychology Today*

Raising a Secure Child

Drawing on the latest research, an updated guide discusses the ethics of gender selection, explains how conception takes place, and tells how to use effective techniques to increase the chances of having a girl or a boy. Original. 12,500 first printing.

Marijuana As Medicine?

Janet Lansbury's advice on respectful parenting is quoted and shared by millions of readers worldwide. Inspired by the pioneering parenting philosophy of her friend and mentor, Magda Gerber, Janet's influential voice encourages parents and child care professionals to perceive babies as unique, capable human beings with natural abilities to learn without being taught; to develop motor and cognitive skills; communicate; face age appropriate struggles; initiate and direct independent play for extended periods; and much more. Once we are able to view our children in this light, even the most common daily parenting experiences become stimulating opportunities to learn, discover, and to connect with our child. "Elevating Child Care" is a collection of 30 popular and widely read articles from Janet's website that focus on some of the most common infant/toddler issues: eating, sleeping, diaper changes, communication, separation, focus and attention span, creativity, boundaries, and more. Eschewing the quick-fix 'tips and tricks' of popular parenting culture, Janet's insightful philosophy lays the foundation for a closer, more fulfilling parent/child relationship, and children who grow up to be authentic, confident, successful adults.

Making Babies

How we raise young children is one of today's most highly personalized and sharply politicized issues, in part because each of us can claim some level of "expertise." The debate has intensified as discoveries about our development-in the womb and in the first months and years-have reached the popular media. How can we use our burgeoning knowledge to assure the well-being of all young children, for their own sake as well as for the sake of our nation? Drawing from new findings, this book presents important conclusions about nature-versus-nurture, the impact of being born into a working family, the effect of politics on programs

for children, the costs and benefits of intervention, and other issues. The committee issues a series of challenges to decision makers regarding the quality of child care, issues of racial and ethnic diversity, the integration of children's cognitive and emotional development, and more. Authoritative yet accessible, *From Neurons to Neighborhoods* presents the evidence about "brain wiring" and how kids learn to speak, think, and regulate their behavior. It examines the effect of the climate-family, child care, community-within which the child grows.

The instant New York Times bestseller! An NPR Book of the Year From the author of *Expecting Better*, an economist's guide to the early years of parenting. "The book is jampacked with information, but it's also a delightful read because Oster is such a good writer." --NPR With *Expecting Better*, award-winning economist Emily Oster spotted a need in the pregnancy market for advice that gave women the information they needed to make the best decision for their own pregnancies. By digging into the data, Oster found that much of the conventional pregnancy wisdom was wrong. In *Cribsheet*, she now tackles an even greater challenge: decision-making in the early years of parenting. As any new parent knows, there is an abundance of often-conflicting advice hurled at you from doctors, family, friends, and strangers on the internet. From the earliest days, parents get the message that they must make certain choices around feeding, sleep, and schedule or all will be lost. There's a rule--or three--for everything. But the benefits of these choices can be overstated, and the trade-offs can be profound. How do you make your own best decision? Armed with the data, Oster finds that the conventional wisdom doesn't always hold up. She debunks myths around breastfeeding (not a panacea), sleep training (not so bad!), potty training (wait until they're ready or possibly bribe with M&Ms), language acquisition (early talkers aren't necessarily geniuses), and many other topics. She also shows parents how to think through freighted questions like if and how to go back to work, how to think about toddler discipline, and how to have a relationship and parent at the same time. Economics is the science of decision-making, and *Cribsheet* is a thinking parent's guide to the chaos and frequent misinformation of the early years. Emily Oster is a trained expert--and mom of two--who can empower us to make better, less fraught decisions--and stay sane in the years before preschool.

Brain Health From Birth

Within this remarkable collection of memoirs are stories of personal endurance, loss, unwavering dedication and sacrifice and, above all, confirmation of the inexplicable love that stems from the act of becoming a parent. These are the personal stories behind assisted reproduction techniques.

Elevating Child Care: A Guide to Respectful Parenting

Some people suffer from chronic, debilitating disorders for which no conventional treatment brings relief. Can marijuana ease their symptoms? Would it be breaking the law to turn to marijuana as a medication? There are few sources of objective, scientifically sound advice for people in this situation. Most books about marijuana

and medicine attempt to promote the views of advocates or opponents. To fill the gap between these extremes, authors Alison Mack and Janet Joy have extracted critical findings from a recent Institute of Medicine study on this important issue, interpreting them for a general audience. *Marijuana As Medicine?* provides patients--as well as the people who care for them--with a foundation for making decisions about their own health care. This empowering volume examines several key points, including: Whether marijuana can relieve a variety of symptoms, including pain, muscle spasticity, nausea, and appetite loss. The dangers of smoking marijuana, as well as the effects of its active chemical components on the immune system and on psychological health. The potential use of marijuana-based medications on symptoms of AIDS, cancer, multiple sclerosis, and several other specific disorders, in comparison with existing treatments. *Marijuana As Medicine?* introduces readers to the active compounds in marijuana. These include the principal ingredient in Marinol, a legal medication. The authors also discuss the prospects for developing other drugs derived from marijuana's active ingredients. In addition to providing an up-to-date review of the science behind the medical marijuana debate, Mack and Joy also answer common questions about the legal status of marijuana, explaining the conflict between state and federal law regarding its medical use. Intended primarily as an aid to patients and caregivers, this book objectively presents critical information so that it can be used to make responsible health care decisions. *Marijuana As Medicine?* will also be a valuable resource for policymakers, health care providers, patient counselors, medical faculty and students--in short, anyone who wants to learn more about this important issue.

What to Expect: Before You're Expecting

This book discusses the common principles of morality and ethics derived from divinely endowed intuitive reason through the creation of al-fitr' a (nature) and human intellect (al-'aql). Biomedical topics are presented and ethical issues related to topics such as genetic testing, assisted reproduction and organ transplantation are discussed. Whereas these natural sources are God's special gifts to human beings, God's revelation as given to the prophets is the supernatural source of divine guidance through which human communities have been guided at all times through history. The second part of the book concentrates on the objectives of Islamic religious practice - the maqa' sid - which include: Preservation of Faith, Preservation of Life, Preservation of Mind (intellect and reason), Preservation of Progeny (al-nasl) and Preservation of Property. Lastly, the third part of the book discusses selected topical issues, including abortion, assisted reproduction devices, genetics, organ transplantation, brain death and end-of-life aspects. For each topic, the current medical evidence is followed by a detailed discussion of the ethical issues involved.

The Fertility Plan

Doctors and researchers are increasingly learning that by the time a woman gets pregnant, she may have already missed a critical window of opportunity to give her baby the best start in life. In this friendly and authoritative guide, Dr. Michael C. Lu, an expert in the field, offers a step-by-step prepregnancy plan that will help you have a safer pregnancy and a smarter and healthier child. Dr. Lu's plan

explains how you can help prevent pregnancy complications such as gestational diabetes or preeclampsia, and minimize the likelihood of many childhood conditions, from asthma to autism. His expert advice includes: Ten brain foods you should eat more Ten toxic foods to avoid Ten steps to strengthen your stress resilience Ten steps to tune up your immune system Ten steps to detoxify your environment And much more!

Science and Babies

Making Babies

The Wonder Weeks reveals what's going on inside baby's mind. Including a bonus chapter with everything about the relationship between sleep and leaps, as well as unique insight into your baby's sleeping behavior. The book includes: * Week-by-week guide to baby's behavior* When to expect the fussy behavior, what this implies (cranky, clingy, crying (the three C's) behavior) and how to deal with these

regression periods (leaps)* A description from your baby's perspective of the world around him and how you can understand the changes he's going through* Fun games and gentle activities you can do with your child* Unique insight into your baby's sleeping behaviour The book is based on the scientific- and parental-world-changing discovery of a phenomenon: all normal, healthy babies appear to be more fussy at very nearly the same ages, regression periods, and sleep less in these phases. These age-related fluctuations in need for body contact and attention (regression periods) are related to major and quite dramatic changes in the brains of the children. These changes enable a baby to enter a whole new perceptual world and, as a consequence, to learn many new skills. This should be a reason for celebration, but as far as the baby is concerned these changes are bewildering. He's taken aback--everything has changed overnight. It is as if he has woken up on a strange planet. He needs you to guide him and understand what he is going through! Get ready to rediscover the world all over again with your baby Bonus: Sleep, and the lack of sleep that's something we all have to deal with when we have a baby. The bonus chapter includes everything about the relationship between sleep and leaps, as well as unique insight into your baby's sleeping behavior. Hint: did you know your baby learns (and there's a lot of brain activity) during those little, 'light' sleeps?

Fire Child, Water Child

Making Babies offers a proven 3-month program designed to help any woman get pregnant. Fertility medicine today is all about aggressive surgical, chemical, and technological intervention, but Dr. David and Blakeway know a better way. Starting by identifying "fertility types," they cover everything from recognizing the causes of fertility problems to making lifestyle choices that enhance fertility to trying surprising strategies such as taking cough medicine, decreasing doses of fertility drugs, or getting acupuncture along with IVF. Making Babies is a must-have for every woman trying to conceive, whether naturally or through medical intervention. Dr. David and Blakeway are revolutionizing the fertility field, one baby at a time.

Making Babies Book

Fire Child, Water Child is a revolutionary guide to parenting a child with attention-deficit hyperactivity disorder (ADHD) that does not rely on medication or pathologizing your child's challenges. This method, created by pediatrician and ADHD specialist Stephen Scott Cowan, helps you identify your child's unique focusing style—wood, fire, earth, metal, or water—and calm the stress that can contribute to your child's ADHD symptoms. This personalized approach will help

your child reduce impulsive behavior, regulate attention, and handle school and home routines with confidence. What is your child's ADHD style? • The Wood Child An adventurous explorer, the Wood child is always on the move and gets frustrated easily. • The Fire Child The Fire child is outgoing, funny, and can be prone to mood swings and impulsive actions. • The Earth Child The cooperative, peacemaking Earth child can feel worried or indecisive when stressed. • The Metal Child The Metal child is comforted by routine and finds it difficult to shift attention from task to task. • The Water Child An imaginative dreamer, the Water child struggles to keep track of time.

Raising a bright and happy child starts during pregnancy and early infancy, when small changes can have a big impact on brain development. By taking advantage of this golden window of opportunity--when millions of new brain cells are formed every single day--you can help support your child's IQ, language development, memory, attention span, and emotional regulation. Importantly, the same strategies that nurture these cognitive abilities can also help reduce the odds of autism and ADHD, conditions that now impact 1 in 10 children. Brain Health from Birth is your guide to this new scientific frontier, explaining which key nutrients may be missing from your prenatal supplement, how to reduce the odds of preterm birth, what to look for in a formula, how to support your baby's microbiome, and much more. With contributions from leading obstetricians and pediatricians, science writer Rebecca Fett (author of the bestselling fertility book It Starts with the Egg) brings you practical advice you can start applying today, to help your baby thrive.

Announcing the prequel! From Heidi Murkoff, author of the world's bestselling pregnancy and parenting books, comes the must-have guide every expectant couple needs before they even conceive - the first step in What to Expect: What to Expect Before You're Expecting. Medical groups now recommend that all hopeful parents plan for baby-making at least three months before they begin trying. And who better to guide want-to-be mums and dads step-by-step through the preconception (and conception) process than Heidi Murkoff? It's all here. Everything couples need to know before sperm and egg meet. Packed with the same kind of reassuring, empathic and practical information and advice that readers have come to expect from What to Expect, only sooner. Which baby-friendly foods to order up (say yes to yams) and which fertility-busters to avoid (see you later, saturated fat); lifestyle adjustments that you'll want to make (cut back on cocktails and caffeine) and those you can probably skip (that switch to boxer shorts). How to pinpoint ovulation, keep on-demand sex sexy, and separate conception fact from myth. Plus, when to seek help and the latest on fertility treatments - from IVF to surrogacy and more. Complete with a fill-in fertility journal to keep track of the baby-making adventure and special tips throughout for hopeful dads. Next step? What to Expect When You're Expecting, of course.

Fueling Male Fertility

Today's parents are constantly pressured to be perfect. But in striving to do everything right, we risk missing what children really need for lifelong emotional security. Now the simple, powerful "Circle of Security" parenting strategies that Kent Hoffman, Glen Cooper, and Bert Powell have taught thousands of families are available in self-help form for the first time. You will learn: *How to balance nurturing and protectiveness with promoting your child's independence. *What emotional needs a toddler or older child may be expressing through difficult behavior. *How your own upbringing affects your parenting style--and what you can do about it. Filled with vivid stories and unique practical tools, this book puts the keys to healthy attachment within everyone's reach--self-understanding, flexibility, and the willingness to make and learn from mistakes. Self-assessment checklists can be downloaded and printed for ease of use.

A Child Becomes a Reader

Making Babies Book is a fun, informational, artistic, and colorful pregnancy book. Follow Shoshanna through her pregnancy and the birth of her daughter as she stays healthy and builds a baby. Making Babies Book covers information that is in the Making Babies DVDs, volumes 1, 2, and 3, and includes many deliciously healthy recipes, wonderful gluten-free recipes, grandma's remedies, herbal concoctions, need-to-know facts, and a baby diary to learn and journal about your baby experience. Packed with 480 beautiful pages of research about fertility, conception, morning sickness, pregnancy, birth, nursing, postpartum issues, losing weight, and more.

How to Choose the Sex of Your Baby

Despite what you see on movies and TV, Americans have less sex than people in any other country. One in three women, of all ages, reports a lack of interest in sex, and more than 40 million Americans in relationships are having no sex at all. But rather than feeling complacent about it, most couples would like to have that interest back. The desire for desire is a feeling few women forget—or abandon. Combining Eastern wisdom and techniques with a Western medical perspective, Jill Blakeway—called a “fertility goddess” by The New York Times for her bestseller, Making Babies—shows women how to revive their libidos and rekindle their sex lives. Assessments and quizzes help the reader place herself and her partner on the scale of yin and yang. Jill then shows how to keep these opposites—passive/active, accepting/initiating, cool/hot—in correct balance. Specific meditations and breathing techniques help unblock qi (pronounced chee), the essential energy that flows through the body. There are chapters on specific elements of love-making: massage, kissing, positions, orgasms—having them, holding them, making them last. And finally, “Sex in Six,” a six-week program of reclaiming an active, satisfying, and possibly better-than-ever-before sex life. The book is full of case studies, fun “Do It Now” suggestions, and “He Said” boxes written by the author’s husband and medical partner, Noah Rubinstein. It addresses common sexual dysfunctions, healthy hormones, and herbal remedies. Sex Again provides a path to balance and emotional wisdom—individually and as a couple.

It Starts with the Egg

Fertility medicine today is all about aggressive surgical, chemical, and technological intervention, but Dr. David and Blakeway know a better way. Starting by identifying "fertility types," they cover everything from recognizing the causes of fertility problems to making lifestyle choices that enhance fertility to trying surprising strategies such as taking cough medicine, decreasing doses of fertility drugs, or getting acupuncture along with IVF. Dr. David and Blakeway are revolutionizing the fertility field, one baby at a time.

The Infertility Cure

Infertility medicine today is all about aggressive surgical, chemical and technological intervention. But making babies originally was - and is still best as - a natural process. In the UK it is estimated that approximately 1 in every 7 couples have difficulty conceiving and 1 in 80 babies is born as a result of IVF treatment. While 75% of people seeking help with their fertility try alternative treatment, few doctors are aware of how the disciplines of Western and Eastern fertility treatment can be used together to achieve the best results. This is a unique collaboration that combines the best of Dr David's and Jill Blakeway's expertise. In THE FERTILITY PLAN they show that half of women who use IVF could have got pregnant without it if the right knowledge and advice were available to them, and they share their proven 3-month plan that increases women's chances of conceiving naturally.

Transforming the Workforce for Children Birth Through Age 8

A leading child psychiatrist shows why it's best for parents to put down the flashcards and follow their instincts. Parents are constantly exposed to dubious claims and fads that create needless anxiety and stress, from the vaccine-autism scare to worthless products such as "Baby Einstein" videos. Worse, they're often discouraged from doing things that have been proven to protect children, promote learning, and wire young brains for healthy development. Child development expert Stephen Camarata draws on research, case studies, and his own experiences to argue for a return to instinct-driven parenting. He shows why developmental milestones are misleading and the best things you can do to make sure your kid grows up functional are almost always simple activities such as playing "peek-a-boo," reading aloud, and talking to them. This is the true "magic" that turns babies into intelligent, confident, curious adults. Camarata debunks a range of parenting myths and empowers parents to recognize irrational fears and incredible claims that increase worry, steal their cash, and generally diminish their enjoyment of the parenting process.

Baby and Child Care

An increasing collection of research confirms that men's fertility health is just as important as the women's when couples are trying to conceive. Yet, there are only

a small handful of resources supporting men trying to expand their family. Written by award-winning registered dietitian and nutrition expert Lauren Manaker, this guide you will find specific nutrition and lifestyle interventions that have been shown to improve male fertility parameters in scientific peer-reviewed papers. You will also find the author's personal recommendations for how to implement certain measures. Lastly, you will find a brief outline highlighting certain things you can do to modify your diet and lifestyle according to specific fertility challenges.

The Sleep Lady's Good Night, Sleep Tight

Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well.

Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

Sex Again

The go-to guide to getting infants and toddlers to fall and stay asleep, completely revised and updated Kim West, LCSW-C, known to her clients as The Sleep Lady®, has developed an alternative and effective approach to helping children learn to gently put themselves to sleep without letting them "cry it out" -- an option that is not comfortable for many parents. Essential reading for any tired parent, or any expectant parent who wants to avoid the pitfalls of sleeplessness, Good Night, Sleep Tight offers a practical, easy-to-follow remedy that will work for all families in need of nights of peaceful slumber! New material and updates include: New yoga

recommendations Updated information for parents of young infants Expanded information on nighttime potty training Ending co-sleeping Sleep training for twins and multiples

Green Fertility

Perfect for expecting parents who want to provide a soothing home for the newest member of their family, *The Happiest Baby on the Block*, the national bestseller by respected pediatrician and child development expert Dr. Harvey Karp, is a revolutionary method for calming a crying infant and promoting healthy sleep from day one. In perhaps the most important parenting book of the decade, Dr. Harvey Karp reveals an extraordinary treasure sought by parents for centuries --an automatic "off-switch" for their baby's crying. No wonder pediatricians across the country are praising him and thousands of Los Angeles parents, from working moms to superstars like Madonna and Pierce Brosnan, have turned to him to learn the secrets for making babies happy. Never again will parents have to stand by helpless and frazzled while their poor baby cries and cries. Dr. Karp has found there IS a remedy for colic. "I share with parents techniques known only to the most gifted baby soothers throughout history ...and I explain exactly how they work." In a innovative and thought-provoking reevaluation of early infancy, Dr. Karp blends modern science and ancient wisdom to prove that newborns are not fully ready for the world when they are born. Through his research and experience, he has developed four basic principles that are crucial for understanding babies as well as improving their sleep and soothing their senses:

- The Missing Fourth Trimester: as odd as it may sound, one of the main reasons babies cry is because they are born three months too soon.
- The Calming Reflex: the automatic reset switch to stop crying of any baby in the first few months of life.
- The 5 "S's": the simple steps (swaddling, side/stomach position, shushing, swinging and sucking) that trigger the calming reflex. For centuries, parents have tried these methods only to fail because, as with a knee reflex, the calming reflex only works when it is triggered in precisely the right way. Unlike other books that merely list these techniques Dr. Karp teaches parents exactly how to do them, to guide cranky infants to calm and easy babies to serenity in minutes...and help them sleep longer too.
- The Cuddle Cure: the perfect mix the 5 "S's" that can soothe even the most colicky of infants.

In the book, Dr. Karp also explains: What is colic? Why do most babies get much more upset in the evening? How can a parent calm a baby--in mere minutes? Can babies be spoiled? When should a parent of a crying baby call the doctor? How can a parent get their baby to sleep a few hours longer? Even the most loving moms and dads sometimes feel pushed to the breaking point by their infant's persistent cries. Coming to the rescue, however, Dr. Karp places in the hands of parents, grandparents, and all childcare givers the tools they need to be able to calm their babies almost as easily as...turning off a light. From the Hardcover edition.

The Intuitive Parent

What if you could choose the sex of your baby? There are many existing sex-selection methods out there, but parents have come to find out that these methods are confusing and unreliable. Kathryn Taylor introduces a natural sex-selection approach known as *The Babydust Method, * which is based on the latest scientific evidence. This book details the science behind the method, and explains how you can dramatically increase your chances of conceiving the sex of your choice. This book reveals the flaws in the Shettles method, O+12, egg polarity, pH, and acidic/alkaline/ion diets, and offers a brand new approach involving a combination of precise timing and frequency that has been proven to work in a published clinical study.

Making Babies

The first comprehensive look at the groundbreaking field of energy medicine and how it can be used to diagnose and treat illness, from one of the world's foremost practitioners of Traditional Chinese Medicine. Today, more of us than ever are discovering the curative powers of energy medicine. Scientific studies continue to confirm its validity, and medical doctors are regularly prescribing treatments such as acupuncture to their patients. But even for those of us who have benefitted from such treatments, the question remains: what exactly is energy medicine, and how does it work? Acupuncturist and Traditional Chinese Medicine (TCM) scholar Jill Blakeway has been treating patients for more than twenty-five years. For Jill, the term "energy medicine" refers to the wide range of healing modalities used to diagnose and treat illness by manipulating the energy—the vital life force referred to as "qi" in TCM—that pulses through the cells of our bodies. But even this seasoned practitioner admits she doesn't truly understand how some of her patients are healed under her care, and retains a healthy skepticism about her own abilities as well those of her peers. In *Energy Medicine*, Jill invites us on her global journey to better understand, apply, and explain this powerful healing force. Moving from her own clinic to the halls of academia, she talks to top healers, researchers, and practitioners—from the Stanford and Princeton professors researching the physics behind energy medicine and healing; to a Chinese Qi Gong master who manifests healing herbs directly from her palm; to a team of skeptical scientists who use "hands on" healing to repeatedly cure mammary cancer in mice. She also tells the story of how she discovered energy medicine and became one of the most sought-after healers in the world. Lively, entertaining, and informative, told in Jill's funny, relatable, and wholly grounded voice, *Energy Medicine* bridges the gap between science and spirituality and offers a persuasive, evidence-based case that advances this ancient healing practice.

The Happiest Baby on the Block

By all indicators, the reproductive health of Americans has been deteriorating since 1980. Our nation is troubled by rates of teen pregnancies and newborn deaths that are worse than almost all others in the Western world. *Science and Babies* is a straightforward presentation of the major reproductive issues we face that suggests answers for the public. The book discusses how the clash of opinions on sex and family planning prevents us from making a national commitment to reproductive health; why people in the United States have fewer contraceptive

choices than those in many other countries; what we need to do to improve social and medical services for teens and people living in poverty; how couples should "shop" for a fertility service and make consumer-wise decisions; and what we can expect in the future--featuring interesting accounts of potential scientific advances.
