Physical Sciences, Grade 12

Technological Advancement Through Canada-U.S.-global Interchange

The Chemical News and Journal of Physical Science

The fascinating story of the men who founded the nuclear age, fully told for the first time
The story of the twentieth century is largely the story of the power of science and technology. Within that story is the incredible tale of the human conflict between Robert Oppenheimer, Ernest Lawrence, and Edward Teller-the scientists most responsible for the advent of weapons of mass destruction. How did science-and its practitioners-enlisted in the service of the state during the Second World War, become a slave to its patron during the Cold War? The story of these three men, builders of the bombs, is fundamentally about loyalty-to country, to science, and to each other-and about the wrenching choices that had to be made when these allegiances came into conflict. Gregg Herken gives us the behind-the-scenes account based upon a decade of research, interviews, and newly released Freedom of Information Act and Russian documents. Brotherhood of the Bomb is a vital slice of American history told authoritatively-and grippingly-for the first time.

Science and Government Report

A Memorandum on Our Vernaculars, as Media of Elementary Instruction

Openness and sharing of information are fundamental to the progress of science and to the effective functioning of the research enterprise. The advent of scientific journals in the 17th century helped power the Scientific Revolution by allowing researchers to communicate across time and space, using the technologies of that era to generate reliable knowledge more quickly and efficiently. Harnessing today's stunning, ongoing advances in information technologies, the global research enterprise and its stakeholders are moving toward a new open science ecosystem. Open science aims to ensure the free availability and usability of scholarly publications, the data that result from scholarly research, and the methodologies, including code or algorithms, that were used to generate those data. Open Science by Design is aimed at overcoming barriers and moving toward open science as the default approach across the research enterprise. This report explores specific examples of open science and discusses a range of challenges, focusing on stakeholder perspectives. It is meant to provide guidance to the research enterprise and its stakeholders as they build strategies for achieving open science and take the next steps.

Technical Memorandum - National Advisory Committee for Aeronautics

"Report of the Dominion fishery commission on the fisheries of the province of Ontario, 1893", issued as vol. 26, no. 7, supplement.

Sessional Papers

1 Aim and General Description of the Anthology The purpose of this anthology is to introduce the English speaking public to the wide spectrum of texts authored predominantly by physicists portraying the actual and perceived role of physics in the Nazi state. Up to now no broad and well balanced documentation of German physics during this time has been available in English, despite the significant role physics has played both politically (e. g. , in weaponry planning) and ideologically (e. g. , in the controversy over the value of theoretical ('Jewish') vs. experimental ('Aryan') physics), and even though prominent figures like the scientist-philosopher and emigre Albert Einstein and the controversial nuclear physicist Werner Heisenberg have become household names. This anthology will attempt to bridge this gap by presenting contemporary documents and eye-witness accounts by the physicists themselves. Authors were chosen to represent the various political opinions and specialties within the physics community, omitting some of the more readily accessible texts by leading physicists (e. g. , Einstein, Heisenberg, Lenard) in favor of those by less well-known but nonetheless important figures (e. g. , Finkelburg, Max Wien, Ramsauer). In this way we hope not only to circumvent the constricted 'Great Men' approach to history but also to offer a broader picture of the activities and conflicts within the field and the effects of the political forces exerted upon them.

Memorandum on the Teaching of Geography

Parliamentary Papers, House of Commons and Command

Brotherhood of the Bomb

In the early 1640s Henry Best, a gentleman farmer of Elmswell in the East Riding of Yorkshire, composed an account of his farming practices. The resulting Farming Book provides a unique account of seventeenth-century farming, of the marketing of agricultural produce, and of rural customs. It is here published in a new transcription by Donald Woodward. In addition, a complete transcript of Henry Best's Memorandum Book is published for the first time; this volume gives details of a wide range of day-to-day transactions mainly during the period 1617 to 1645. The editor adds greatly to our knowledge of Henry Best, his family and estate in a substantial introduction, and much ancillary documentary evidence is provided in a series of appendices. The volume is rounded off by an extensive new glossary

prepared by Peter McClure.

The Farming and Memorandum Books of Henry Best of Elmswell, 1642

A Lever Long Enough

NOAA Technical Memorandum EDS BC.

Proceedings

Energy Research Abstracts

Over 220,000 entries representing some 56,000 Library of Congress subject headings. Covers all disciplines of science and technology, e.g., engineering, agriculture, and domestic arts. Also contains at least 5000 titles published before 1876. Has many applications in libraries, information centers, and other organizations concerned with scientific and technological literature. Subject index contains main listing of entries. Each entry gives cataloging as prepared by the Library of Congress. Author/title indexes.

Technical Memorandum

Contains the full texts of all Tax Court decisions entered from Oct. 24, 1942 to date, with case table and topical index.

Catalogue, Books and Journals in Advanced Mathematics

Chiefly translations from foreign aeronautical journals.

The Publishers' Trade List Annual

Study & Master Physical Sciences Grade 12 has been especially developed by an experienced author team for the Curriculum and Assessment Policy Statement (CAPS). This new and easy-to-use course helps learners to master essential content and skills in Physical Sciences.

Proceedings

Among the Second Series of The Papers of Thomas Jefferson, this volume has the most detailed coverage of his day-to-day life. These disciplined records of personal expenditures, and of various other daily observations, furnish valuable information about prices and availability of commodities of the period and provide abundant evidence of Jefferson's devotion to a systematic way of living and of his insatiable curiosity. Originally published in 1997. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

Tax Court Memorandum Decisions

In this comprehensive social history of Columbia University's School of Engineering and Applied Science (SEAS), Robert McCaughey combines archival research with oral testimony and contemporary interviews to build a critical and celebratory portrait of one of the oldest engineering schools in the United States. McCaughey follows the evolving, occasionally rocky, and now integrated relationship between SEAS's engineers and the rest of the Columbia University student body, faculty, and administration. He also revisits the interaction between the SEAS staff and the inhabitants and institutions of the City of New York, where the school has resided since its founding in 1864. McCaughey compares the historical struggles and achievements of the school's engineers with their present-day battles and accomplishments, and he contrasts their teaching and research approaches with those of their peers at other free-standing and Ivy League engineering schools. What begins as a localized history of a school striving to define itself within a university known for its strengths in the humanities and the social sciences becomes a wider story of the transformation of the applied sciences into a critical component of American technology and education.

Open Science by Design

Directory of Engineering Document Sources

Includes all works deriving from DOE, other related government-sponsored information and foreign nonnuclear information.

Historical Studies in the Physical Sciences

Pure and Applied Science Books, 1876-1982

The Mysore Gazette

The Orissa Gazette

This comprehensive yet concise annual annotated reference source catalogs the important series, periodicals and reference tools published by U.S. government agencies. Over the years, the index section of the Guide to U.S. Government Publications has expanded to more than 40,000 entries. Agencies and titles are indexed, followed by a keyword title index for quick and easy referencing. No other single resource provides historical and current information on U.S. government publications in one place.
