The Theory of Incentives

Known for its clarity, comprehensiveness, and balance, the latest edition of A History of Economic Theory and Method continues that tradition of excellence. Ekelund and Hébert's survey provides historical and international contexts for how economic models have served social needs throughout the centuries—beginning with the ancient Greeks through the present time. The authors not only trace ideas that have persisted but skillfully demonstrate that past, discredited ideas also have a way of spawning critical thinking and encouraging new directions in economic analysis. Coverage that distinguishes the Sixth Edition from its predecessors includes a detailed analysis of economic solutions by John Stuart Mill and Edwin Chadwick to problems raised by the Industrial Revolution; the role of psychology and “experiments” in understanding demand and consumer behavior; discussions of modern economic theory as it interrelates with other social sciences; and a close look at the historical development of the critical role of entrepreneurship, both in its productive and unproductive variants. The authors' creative approach gives readers a feel for the thought processes of the great minds in economics and underscores key ideas impacting contemporary thought and practice. Well-crafted discussions are further enriched by absorbing examples and figures. Thorough suggested reading lists give options for more in-depth explorations by interested readers.

Financing Nonprofits

Nonprofits often struggle financially, overwhelmed by the need to muster a complex combination of income streams that range from grants and government funding to gifts-in-kind and volunteer labor. Financing Nonprofits draws upon a growing body of scholarship in economics and organizational theory to offer a conceptual framework for understanding this diverse mix of financing sources. By applying theory, readers can understand when a nonprofit organization should pursue particular sources of income and how it should manage its portfolio of income from different sources. Organized under the auspices of the National Center on Nonprofit Enterprise, Financing Nonprofits argues that those who would manage nonprofit organizations must first develop a conceptual framework through which they can understand the complicated and fast-paced landscape surrounding nonprofit decision-making. It offers a piece by piece analysis of the many potential components of nonprofit operating income, including a detailed study on how to accumulate the capital needed for major infrastructure projects or endowments and an examination of how to maintain a healthy investment profile once sufficient capital exists. By melding theory with practice, Young and the other contributors to Financing Nonprofits have created a volume that will serve as a

practical guide to financing strategies for executive directors, CFOs, and board members of nonprofit organizations in a wide variety of fields; as a text for graduate students in nonprofit finance; and as a source of ideas for researchers to continue to probe and illuminate the many subtle issues associated with finding the right mix of resources to support the essential work of nonprofit organizations in our society.

Microeconomic Theory

Microeconomic Theory and Applications

Interest in economics is at an all-time high. Among the challenges facing the nation is an economy with rapidly rising unemployment, failures of major businesses and industries, and continued dependence on oil with its wildly fluctuating price. Americans are debating the proper role of the government in company bailouts, the effectiveness of tax cuts versus increased government spending to stimulate the economy, and potential effects of deflation. Economists have dealt with such questions for generations, but they have taken on new meaning and significance. Tackling these questions and encompassing analysis of traditional economic theory and topics as well as those that economists have only more recently addressed, *21st Century Economics: A Reference Handbook* is intended to meet the needs of several types of readers. Undergraduate students preparing for exams will find summaries of theory and models in key areas of micro and macroeconomics. Readers interested in learning about economic analysis of an issue as well students embarking on research projects will find introductions to relevant theory and empirical evidence. And economists seeking to learn about extensions of analysis into new areas or about new approaches will benefit from chapters that introduce cutting-edge topics. To make the book accessible to undergraduate students, models have been presented only in graphical format (minimal calculus) and empirical evidence has been summarized in ways that do not require much background in statistics or econometrics. It is thereby hoped that chapters will provide both crucial information and inspiration in a non-threatening, highly readable format.

Homo Oeconomicus 32 (1)

Like its predecessors, the third edition of *Health Policy Issues: An Economic Perspective* will help readers understand the issues underlying the politics and economics of health services. This policy primer uses an economic approach to explain the forces pressing for change in healthcare, as well as why the health system has evolved to its current state.

Microeconomics, Study Guide

Economics has much to do with incentives--not least, incentives to work hard, to

produce quality products, to study, to invest, and to save. Although Adam Smith amply confirmed this more than two hundred years ago in his analysis of sharecropping contracts, only in recent decades has a theory begun to emerge to place the topic at the heart of economic thinking. In this book, Jean-Jacques Laffont and David Martimort present the most thorough yet accessible introduction to incentives theory to date. Central to this theory is a simple question as pivotal to modern-day management as it is to economics research: What makes people act in a particular way in an economic or business situation? In seeking an answer, the authors provide the methodological tools to design institutions that can ensure good incentives for economic agents. This book focuses on the principal-agent model, the "simple" situation where a principal, or company, delegates a task to a single agent through a contract--the essence of management and contract theory. How does the owner or manager of a firm align the objectives of its various members to maximize profits? Following a brief historical overview showing how the problem of incentives has come to the fore in the past two centuries, the authors devote the bulk of their work to exploring principal-agent models and various extensions thereof in light of three types of information problems: adverse selection, moral hazard, and non-verifiability. Offering an unprecedented look at a subject vital to industrial organization, labor economics, and behavioral economics, this book is set to become the definitive resource for students, researchers, and others who might find themselves pondering what contracts, and the incentives they embody, are really all about.
