All children deserve the best-why not begin with a name? The power of a name has always been prominent in history. Names are not given by chance or accident; they are attached to us according to our needs, though we are rarely aware of this. Each alphabet in a person's name carries a vibration which lends itself to the individual. The children of the 21st

century will face a unique set of challenges. In general, these children will be initiators of a new world order and generations will be more focussed on responsibility in human affairs and will end the 20th century's unabashed egocentricity. Their ambitions will provide an intuitive sensitivity to world affairs, where the heart will play a more important role than the mind. This book is a numerological guide to naming babies born between 1st January and 31 st December, 2011. It helps parents know the qualities they can expect in their newborns and advises them on how to name their babies in order to support their numerological charts and benefit them over the long term. While a child's date of birth governs his numerological Birth Chart, his name also plays a role in determining his destiny. The inclusion of certain alphabets in the child's name will support his various numerological charts. This book suggests specific sets of alphabets which will help parents choose a numerologically appropriate name. This guide suggests alphabets from the English language according to numerological considerations only which apply inclusively to names of all races, religions and cultures. This book attempts to provide all new parents with the basic knowledge of how to provide a powerful name vibration for their babies.

This is a textbook on proof writing in the area of analysis, balancing a survey of the core concepts of

mathematical proof with a tight, rigorous examination of the specific tools needed for an understanding of analysis. Instead of the standard "transition" approach to teaching proofs, wherein students are taught fundamentals of logic, given some common proof strategies such as mathematical induction, and presented with a series of well-written proofs to mimic, this textbook teaches what a student needs to be thinking about when trying to construct a proof. Covering the fundamentals of analysis sufficient for a typical beginning Real Analysis course, it never loses sight of the fact that its primary focus is about proof writing skills. This book aims to give the student precise training in the writing of proofs by explaining exactly what elements make up a correct proof, how one goes about constructing an acceptable proof, and, by learning to recognize a correct proof, how to avoid writing incorrect proofs. To this end, all proofs presented in this text are preceded by detailed explanations describing the thought process one goes through when constructing the proof. Over 150 example proofs, templates, and axioms are presented alongside full-color diagrams to elucidate the topics at hand.
