Central European Avant-gardes

Monographic Series

The previously untold story of the Zenith Trans-Oceanic, the world's most romantic and expensive series of portable radios. Long a companion of kings, presidents, transoceanic yachtsmen and world explorers, the Trans-Oceanic was also carried into battle by American troops in three wars. Its great popularity in spite of a very high price can be laid at the feet of several generations of armchair travelers who used the shortwave capabilities of the Trans-Oceanic as a window on the world. With access to the Zenith corporate archives and their long experience as radio enthusiasts and writers for both the popular and scholarly press, Professors Bryant and Cones present the engrossing stories of the development and use of the Trans-Oceanic throughout its forty year life. They present a wealth of never-before published photographs, documents and information concerning these fascinating radios, their collection, preservation and restoration.

A Dictionary of the English Language

“The Soyuz Launch Vehicle” tells the story, for the first time in a single English-language book, of the extremely successful Soyuz launch vehicle. Built as the world’s first intercontinental ballistic missile (ICBM), Soyuz was adapted to launch not only Sputnik but also the first man to orbit Earth, and has been in service for over fifty years in a variety of forms. It has launched all Soviet manned spacecraft and is now the only means of reaching the International Space Station. It was also the workhorse for launching satellites and space probes and has recently been given a second life in French Guiana, fulfilling a commercial role in a joint venture with France. No other launch vehicle has had such a long and illustrious history. This remarkable book gives a complete and accurate description of the two lives of Soyuz, chronicling the recent cooperative space endeavors of Europe and Russia. The book is presented in two parts: Christian Lardier chronicles the “first life” in Russia while Stefan Barensky explores its “second life,” covering Starsem, the Franco-Russian company and implementation of technology for the French Guiana Space Agency by ESA. Part One has been developed from Russian sources, providing a descriptive approach to very technical issues. The second part of the book tells the contemporary story of the second life of Soyuz, gathered from Western sources and interviews with key protagonists. “The Soyuz Launch Vehicle” is a detailed description of a formidable human adventure, with its political, technical, and commercial ramifications. At a time when a new order was taking shape in the space sector, the players being the United States, Russia, Europe and Asia, and when economic difficulties sometimes made it tempting to give up, this book reminds us that in the global sector, nothing is impossible.

The Zenith Trans-Oceanic

Presents the documented story of Zenith radio and company from 1919 through 1935. Tells of Zenith's impact on early radio history with photographs, documents and information, as well as color portraits of many Zenith radios of the era.

Zenith Radio

Most know Androma Racella as the Bloody Baroness: a powerful mercenary whose reign of terror stretches across the Mirabel Galaxy. To those aboard her fearsome glass starship the Marauder, she's just Andi, their captain and protector. When a routine mission goes awry, the all-girl crew's resilience is tested as they find themselves in a most unfamiliar place: at the mercy of a powerful bounty hunter connected to Andi's past and a harrowing betrayal.

The Century Dictionary: The Century dictionary

El col·lectiu La Gent del Llamp, que ha anat mantenint aquesta col·lecció de llibres des de 1982, va adoptar el nom de Zenit per identi car alguns productes literaris i artístics menys convencionals (obres d'extensió breu, carpetes, formats diferents, etc.). Ara recuperem el nom de Zenit per designar un seguit de treballs, també de poca extensió, amb una preferència pels autors nous, combinats, tanmateix, amb altres autors amb una trajectòria consolidada. Aquests treballs, van essent publicats, al llarg de l'any, i amb periodicitat mensual, en opuscles dedicats cadascun a un autor. En arribar el juny, època de la sega, els treballs són aplegats en un volum com el present per facilitarne la difusió. En aquest primer volum d'aquesta nova sèrie, que reuneix treballs publicats en opuscle durant el període 2007-08, hi ha contes, poesia i teatre i s'hi combinen els autors que es veuen editats per primer cop, amb altres que ja han publicat una important quantitat de títols.

The Imperial Dictionary, English, Technological, and Scientific

The Structurist

This reader-friendly resource covers the broad spectrum of satellite principles and their associated technologies. While other books limit their coverage to specialized services or to satellite payloads such as communication satellites, Satellite Systems focuses upon the methodology of launching satellites, keeping them there, the environments under which they operate, and other facets particular to their operation. Pattan's detailed, elaborate approach does not assume that the reader is versed in esoteric mathematics. Satellite Systems is specific enough to be a valuable working-tool to scientists and engineers in related fields, yet general enough to be accessible to students and interested lay people. Pattan thoroughly explores the concepts and technologies of satellite systems in simple, direct terms. Satellite Systems includes precise coverage of: *various orbits and the services they provide *international launch of vehicles and launch sites *phased array antennas for satellite network applications *mobile satellite services from land vehicles, aircraft, and ships *low orbit satellites for telecommunication and position determination applications *international frequency allocations for satellite control, payload management, and status *geometric relationships between satellite and Earth stations used in interference analysis, orbit determination, and location *the hostile environments in which satellites operate and cope *and much more

Satellite Systems is a self-contained, extensive introduction that offers professionals and advanced undergraduate and graduate students of satellite systems the tools they need for in-depth understanding of the complexities of the subject. It is ideal as both a reference and a training text for engineers, technicians, communication lawyers, weather professionals, telecommunications experts, students, and anyone interested insatellites and satellite technology.
