A veritable cookbook for individuals or corporations seeking funding from the federal government, The Complete Writing Guide to NIH Behavioral Science Grants contains the latest in technical information on NIH grants, including the new electronic submission process. Some of the most successful grant writers in history have contributed to this volume, offering key strategies as well as tips and suggestions in areas that are normally hard to find in grant writing guides, such as budgeting, human subjects, and power analysis. A "who's who" among grant reviewers, this guidebook provides "inside" information as to why some grants are scored well while others flounder during review. A must-read for both entry level grant writers making headway in the complex NIH grant system for the first time as well as more seasoned investigators who can't seem to break the barrier to funded research grants, Drs. Scheier and Dewey's comprehensive volume provides simple and clear explanations into the reasons why some grants get funded, and a step-by-step guide to writing those grants.

Research in Technical Communication

For more than a half century, the Guide to the Evaluation of Education Experiences in the Armed Services has been the standard reference work for recognizing learning acquired in military life. Since 1942, ACE and has worked cooperatively with the US Department of Defense, the Armed Services, and the US Coast Guard in helping hundreds of thousands of individuals earn academic credit for learning achieved while serving their country.

Designing Usable Texts covers the analysis of textual communication processes in the real world of publishing systems and work sites. The book presents topics on designing and understanding of written texts; authoring, editing, and the production process; and training authors of informative documents. The text also describes the policies and processes of editing; lessons in text design from an instructional design perspective; and graphics and design alternatives such as studying strategies and their implications for textbook design. The identification of information requirements such as understanding readers and their uses of texts, modeling users and their use of technical manuals, is also considered. Psychologists and people involved in communication design, document design, information mapping, and educational technology will find the book invaluable.

This sourcebook demonstrates the vigorous work being done in the field of technical and scientific communication. Collectively, the essays offer researchers a basis from which to begin constructing the theoretical framework necessary for the study of technical communication. The book begins with general concerns and progresses to particular applications. The chapters comprising Part I outline larger theoretical perspectives from which to examine technical communication: humanistic approaches to technical communication, the history of technical communication, communication theory and technical writing, and the teaching of technical writing. Part II examines the relationship of technical communication to traditional rhetorical concerns such as invention, audience, modes of organization, and style. Specific types of technical communication--proposals, reports, and business correspondence, among others--are discussed in Part III. The use of the computer, oral presentations, and specialized forms of technical communication are examined in Part IV. The appendixes offer guides to textbooks and style manuals and an overview of the technical writing profession.

Written in a lively, conversational tone and amply illustrated, *Bookmarks: A Guide to Research and Writing* establishes a new benchmark for college research guides, serving as a bridge between old and new traditions for researchers who expect to work regularly in both print and electronic environments. *Bookmarks: A Guide to Writing and Research, Second Edition*, demystifies the writing process by engaging and guiding students through the entire research and writing process. The new edition includes an expanded focus on rhetorical issues, addressing audience, authorial stance, and balanced argumentation, encouraging writers to connect their projects to the wider community and to find a clear purpose for their

research projects. The completely updated approach to research encourages students to use new technologies to find reliable information, using electronic library catalogs, online databases, and the WWW, encouraging them to use the technologies to locate the sources that are most appropriate for their topics and purposes. Bookmarks attends to all aspects of the research and writing process, guiding students through the strategies for selecting a topic, refining it, and developing it into a full-fledged research hypothesis; finding and positioning sources, using them in appropriate and responsible ways to further their projects, and documenting and completing their final projects for print or electronic publication. Renowned authors John Ruskiewicz and Janice Walker prepare students for the ever-changing demands of conducting research in today's technology-driven society.

person to prepare illustration copy at a pre-professional level-copy that is, however, often usable for routine purposes-and/or to communicate better with graphics specialists who will prepare the final illustrations. The skills necessary to take the final step of producing finished camera-ready illustrations are, unfortunately, based very much on actual hands-on experience and are thus beyond the ability of this or any other book to instill satisfactory competence in. Illustrations should also prove to be a highly useful reference work for professional illustrators. The wide variety of training and work experiences by which they have acquired their skills may not have provided full acquaintance with all of the exceptionally diverse kinds of information to be found here. There are, moreover, few disciplines whose practitioners cannot profit from an invigorating refresher course. After nearly seven years of work, then, I am pleased to put forward a book with many answers pertaining to the proper selection and preparation of informational illustrations. All such questions and their actual solutions, however, must remain up to you, the inquiring and attentive reader.

Designing Usable Texts

Many scientists and engineers consider themselves poor writers or find the writing process difficult. The good news is that you do not have to be a talented writer to produce a good scientific paper, but you do have to be a careful writer. In particular, writing for a peer-reviewed scientific or engineering journal requires learning and executing a specific formula for presenting scientific work. This book is all about teaching the style and conventions of writing for a peer-reviewed scientific journal. From structure to style, titles to tables, abstracts to author lists, this book gives practical advice about the process of writing a paper and getting it published.
