The Ascent of the Detective

This volume presents the background to the recently developed European standard (CEN standard) on snow loads. Many of the papers on ""structural engineering"" describe results from a European snow project that was completed in 1999.

The year 1856 saw the first compulsory Police Act in England (and Wales). Over the next thirty years a class society came to be policed by a largely working-class police. This book, first published in 1984, traces the process by which men made themselves into policemen, translating ideas about work and servitude, about local government and local community, servitude and the ideologies of law and central government, into sets of personal beliefs. By tracing the evolution of a policed society through the agency of local police forces, the book illustrates the ways in which a society, at many levels and from many perspectives, understood itself to operate, and the ways in which ownership, servitude, obligation, and the reciprocity of social relations manifested themselves in different communities. This title will be of interest to students of criminology and history.

L'Actualité

LENOUVEL ECONOMISTE

The first systematic cross-country analysis of snow-reliability of Alpine ski areas under climate change for five countries in the region: France, Switzerland, Austria, Italy and Germany.

Policing the Victorian Community

Selected papers on research work conducted in the Hindu Kush-Himalayan Region, West Sichuan (China), Himachal Pradesh (India), the North West Frontier Province (Pakistan), and the Middle Hills of Nepal.

Rock Glaciers

This handbook addresses snow and avalanche phenomena in a forestry setting and presents a risk assessment procedure suitable for incorporation in the terrain stability field assessment process. Outlines harvest design and silvicultural strategies to reduce the risk of avalanche damage. Includes strategies for managing avalanche risks in winter.

One of America's leading anthropologists offers solutions to the perplexing question of why people behave the way they do. Why do Hindus worship cows? Why do Jews and Moslems refuse to eat pork? Why did so many people in post-medieval Europe believe in witches? Marvin Harris answers these and other perplexing questions about human behavior, showing that no matter how bizarre a people's behavior may seem, it always stems from identifiable and intelligible sources.

Union scale, regional development policy-making. Vivid case studies from eleven Central and Southeast European states present diverse perspectives on this region's physical geography, economy and demographics and demonstrate the integrative potential of the geographic perspective in mountain research. Europe as a whole has a lot to gain from a "sustainable mountains" policy, especially in Southeast Europe. In their focus on the sustainable development of such areas, the chapters consider regional development policy, ecosystem services assessment, small-scale tourism, and forestry management. This book will be of interest to a wide audience, including academics, students, and practitioners in the fields of geography, ecology, and environmental studies.

La montagne & alpinisme

Over the long eighteenth century English governance was transformed by large adjustments to the legal instruments and processes of power. This book documents and analyzes these shifts and focuses upon the changing relations between legal authority and the English people.

Ethics and Management in the Public Sector

This volume is the first of four that will provide some of the most significant, English-language articles on the historical development of the police institution. The articles included in this volume are broadly of two

kinds. The first introduce some of the theoretical outlines that have been suggested for the origins and development of modern police institutions across Europe. The second explore the systems of enforcement, and the criticisms of them, that had emerged on the eve of the revolutionary upheavals which convulsed Europe and inflicted a terminal blow to the ancien rme at the close of the eighteenth century.

Grappling with ethical issues is a daily challenge for those working in organizations that deliver public services. Such services are delivered through an often bewildering range of agencies and amidst this constant change, there are fears that a public service ethos, a tradition of working in the public interest, becomes blurred. Using extensive vignettes and case studies, *Ethics and Management in the Public Sector* illuminates the practical decisions made by public officials. The book takes a universal approach to ethics reflecting the world-wide impact of public service reforms and also includes discussions on how these reforms impact traditional values and principles of public services. This easy-to-use textbook is a definitive guide for postgraduate students of public sector ethics, as well as students of public management and administration more generally.

Le Courrier de la nature

The figure of the detective has long excited the imagination of the wider public, and the English police detective has been a special focus of attention in both print and visual media. Yet, while much has been written in the last three decades about the history of

uniformed policemen in England, no similar work has focused on police detectives. The Ascent of the Detective redresses this by exploring the diverse and often arcane world of English police detectives during the formative period of their profession, from 1842 until the First World War, with special emphasis on the famed detective branch established at Scotland Yard. The book starts by illuminating the detectives' socioeconomic background, how and why they became detectives, their working conditions, the differences between them and uniformed policemen, and their relations with the wider community. It then goes on to trace the factors that shaped their changing public image, from the embodiment of 'un-English' values to plebeian knights in armour, investigating the complex and symbiotic exchange between detectives and journalists, and analysing their image as it unfolded in the press, in literature, and in their own memoirs.

Glaciers of the Karakoram Himalaya

This book aims to both reflect and take forward current thinking on comparative and cross-national and cross-cultural aspects of the history of crime. Its content is wide-ranging: some chapters discuss the value of comparative approaches in aiding understanding of comparative history, and providing research directions for the future; others address substantive issues and topics that will be of interest to those with interests in both history and criminology. Overall the book aims to broaden the focus of the historical context of crime and policing to

Photogrammetry is a science based technology with more than a century of history and development. During this time, the techniques used to get information about objects represented in photos have changed dramatically from pure optic mechanical equipment to a fully digital workflow in our days. Parallel to this, the handling became easier, and so it is possible also for non-photogrammetrists to use these methods today. This book is especially written for potential users which have no photogram metric education but would like to use the powerful capabilities from time to time or in smaller projects: Geographers, Geologists, Cartographers, Forest Engineers who would like to come into the fascinating field of photogrammetry via "learning by doing". For this reason, this book is not a textbook - for more and deeper the ory, there exists a lot of literature, and it is suggested to use some of this. A special recommendation should be given to the newest book from KONECNY (2002) for basic theory and the mathematical backgrounds or to the book from SCHENK (1999) for the particular situation in digital

photogrammetry. For a quick reference especially to algorithms and technical terms see also the Photogrammetric Guide from ALBERTZ & KREILING (1989). This book includes a CD-ROM which contains all you need from software and data to learn about the various methods from the beginning (scanning of the photos) to final products like ortho images or mosaics.

Les retenues d'altitude sont des ouvrages hydrauliques implantés dans les stations de loisirs de montagne destinés à créer une réserve d'eau pour la production de neige de culture, d'eau potable, pour l'irrigation, etc. En raison de l'implantation de ces retenues, les difficultés techniques, réglementaires, environnementales et liées à la sécurité publique sont nombreuses et spécifiques. Ce livre, véritable manuel intégré, établit les règles en matière de conception, de réalisation et de surveillance. Il répond aux questions d'évaluation des sites, d'analyse des aléas naturels et technologiques et d'étude des ondes de submersion. Enfin, il propose des éléments d'aide à la décision pour les maîtres d'ouvrage et leurs bureaux conseils quant à l'organisation d'un tel projet.

The earth's cryosphere, which includes snow, glaciers, ice caps, ice sheets, ice shelves, sea ice, river and lake ice, and permafrost, contains about 75% of the earth's fresh water. It exists at almost all latitudes, from the tropics to the poles, and plays a vital role in controlling the global climate system. It also provides direct visible evidence of the effect of climate change, and, therefore, requires proper understanding of its complex dynamics. This encyclopedia mainly focuses on the various aspects of snow, ice and glaciers, but also covers other cryospheric branches, and provides up-to-date information and basic concepts on relevant topics. It includes alphabetically arranged and professionally written, comprehensive and authoritative academic articles by well-known international experts in individual fields. The encyclopedia contains a broad spectrum of topics, ranging from the atmospheric processes responsible for snow formation; transformation of snow to ice and changes in their properties; classification of ice and glaciers and their worldwide distribution; glaciation and ice ages; glacier dynamics; glacier surface and subsurface characteristics; geomorphic processes and landscape formation; hydrology and sedimentary systems; permafrost degradation; hazards caused by cryospheric changes; and trends of glacier retreat on the global scale along with the impact of climate

change. This book can serve as a source of reference at the undergraduate and graduate level and help to better understand snow, ice and glaciers. It will also be an indispensable tool containing specialized literature for geologists, geographers, climatologists, hydrologists, and water resources engineers; as well as for those who are engaged in the practice of agricultural and civil engineering, earth sciences, environmental sciences and engineering, ecosystem management, and other relevant subjects.

Theories and Origins of the Modern Police

This second edition of the book Sustainable Development of Mountain Regions: Southeastern Europe integrates the scientific results and expertise of the researchers from the countries in Southeastern Europe. The book consists of updated information for the topics observed in first edition and several new chapters with analysis of some problems in the mountain regions of four new for the edition countries in Southeastern European space. The general themes in the book are related to Global problems and mountain regions; Nature resources and land use in mountain regions; Social, economic and regional problems of mountain regions; Nature protection, conservation and monitoring and Networks and strategies for mountain regions. The key topics for discussion are: Natural resources and land use in mountain regions. Sustainable social and economic development of the mountain regions. Natural disasters and risk prevention. Spatial modeling and

planning. Nature protection, monitoring and conservation. Politics and sustainable practices for development of mountain regions. Transborder and regional cooperation. Mountain regions in Southeastern Europe are characterized by unique landscape and biological diversity and great economic potential. They have function as a living space and provide different groups of ecosystem and landscape services. In social and economic aspects these regions are one of the poorest in Southeastern European countries with unused potential. Human, ecological and economic problems arising in various mountain regions have the same basic characteristics irrespective of the country. Some mountain regions are subject to specific for the conditions of the mountain and country policy for planning, development and mountain population promotion. The general goal is development of whole economy and the efficient management of natural resources and prevention of natural and technological disasters. The mountain regions are one of the most threatened landscape systems in Southeastern Europe. Understanding the importance of the mountain regions and conservation of the natural heritage require scientific and institutional cooperation at all levels.

Culture and Practical Reason

Victorian Britain is often considered as the high point of 'laissez-faire', the place and the time when people were most 'free' to make their own lives without the aid or interference of the State. This book explores the truth of that assumption and what it might mean. It considers what the Victorian State did or did not do, what were the prevailing definitions and practices of 'liberty', what other sources of discipline and authority existed beyond the State to structure people's lives - in sum, what were the broad conditions under which such a profound belief in 'liberty' could flourish, and a complex society be run on those principles.

Contributors include leading scholars in British political, social and cultural history, so that 'liberty' is seen in the round, not just as a set of ideas or of political slogans, but also as a public and private philosophy that structured everyday life.

Consideration is also given to the full range of British subjects in the nineteenth century - men, women, people of all classes, from all parts of the British Isles - and to placing the British experience in a global and comparative perspective.

The Karakoram contains the greatest concentration of glaciers and most of the largest ice masses outside high latitudes. They comprise major stores and sources of fresh water in an otherwise extreme, continental, dry region. As many as 200 million people living downstream, in the valleys of the Indus and Yarkand Rivers, depend on melt waters from snow and ice. They are at risk from climate-change impacts on glaciers and water supply, and from hazards such as glacial lake outburst floods. Useful research initiatives go back to the nineteenth century, but coverage has generally been limited geographically and has not been continuous over time. It is almost 80 years since a monograph was devoted to the Karakoram glaciers. The book presents a comprehensive overview, including statistics for the ice cover, glacier mass balance and dynamics, glacierized landscapes, rock glaciers, water resources and environmental hazards. Published glaciological and related research is surveyed along with expedition reports and archival materials in several languages. The expanding potential of satellite coverage is exploited, but conditions and processes reported from field investigations are the main focus. Previously unpublished observations by the author are presented, based on some 45 years of work in the region. Broad understanding of the glacial environment is used to address emerging concerns about the High Asian cryosphere and the fate of its glaciers. These are discussed in relation to the pressing issues of water supply, environmental risk and sustainability. Questions of what is not known help identify much needed monitoring and research. The book is of interest to researchers, professionals,

and those studying glaciers, mountain environments, water resources and environmental hazards. The topics discussed should be of concern for anyone involved in regional development and global change in South and Inner Asia.
