Living in the Pink is a series of humorous and insightful short stories with Christian underpinnings. Through the eyes of the wise “Sister Pinky” and Believers Ministries International Church, these stories highlight issues that women grapple with but often remain unspoken in religious circles. The characters are everyday wives, mothers, and singles. They develop and gain a spiritual perspective in dealing with romantic relationships, wayward children, jealousy, church traditions, Christian hypocrisy, and self-righteous judgment, among other themes. Discussion questions help readers connect with the storylines and urge them to look within—and up—to reach their highest potential in life.

Traces the tradition of consumer protest and examines the early history of Consumers Union, which started as a working-class-oriented movement and soon evolved into the guiding light of an educated consumer elite. Silber argues that in choosing scientific testing as a means of consumer reform, the Consumers Union changed itself and the consumer movement more than it did American society. He uses three case studies -- reform of automotive design, discouragement of smoking, and prevention of the contamination of food by radioactive fallout -- to demonstrate the use of scientific testing in social reform.

In spite of all the assistance offered by electronic control systems, the latest generation of passenger car chassis still relies on conventional chassis elements. With a view towards driving dynamics, this book examines these conventional elements and their interaction with mechatronic systems. First, it describes the fundamentals and design of the chassis and goes on to examine driving dynamics with a particularly practical focus. This is followed by a detailed description and explanation of the modern components. A separate section is devoted to the axles and processes for axle development. With its revised illustrations and several updates in the text and list of references, this new edition already includes a number of improvements over the first edition.

Andrew Gordon goes to the core of the Japanese enterprise system, the workplace, and reveals a complex history of contest and confrontation. The Japanese model produced a dynamic economy which owed as much to coercion as to happy consensus. Managerial hegemony was achieved only after a bitter struggle that undermined the democratic potential of postwar society. The book draws on examples across Japanese industry, but focuses in depth on iron and steel. This industry was at the center of the country's economic recovery and high-speed growth, a primary site of corporate managerial strategy and important labor union initiatives. Beginning with the Occupation reforms and their influence on the workplace, Gordon traces worker activism and protest in the 1950s and '60s, and how they gave way to management victory in the 1960s and '70s. He shows how working people had to compromise institutions of self-determination in pursuit of

economic affluence. He illuminates the Japanese system with frequent references to other capitalist nations whose workplaces assumed very different shape, and looks to Japan's future, rebutting hasty predictions that Japanese industrial relations are about to be dramatically transformed in the American free-market image. Gordon argues that it is more likely that Japan will only modestly adjust the status quo that emerged through the turbulent postwar decades he chronicles here.

Here is a unique book. It describes the theories and processes of repairing and adjusting the modern watch in precise and meticulous detail: a thing which has never been done so completely before in the many books on the same subject. As a text book it is a revelation. Taking nothing for granted, except the ability to read and comprehend a simple description of mechanical processes, de Carle takes his reader through every stage and every operation of watch repairing and to deal with them thoroughly is quite a programme - it takes 300 pages containing 24 chapters, two appendices and 553 illustrations. The fine draughtsmanship and accurate technical detail of the illustrations set a new standard. Practical Watch Repairing can justifiably claim to be the best illustrated book on practical horology yet issued, and one of the best of its kind on any subject. The publication of the book marks the beginning of a new epoch in the study of the mechanics of horology.

The 1973 oil crisis forced the American automotive industry into a period of dramatic change, marked by stiff foreign competition, tougher product regulations and suddenly altered consumer demand. With gas prices soaring and the economy in a veritable tailspin, muscle cars and the massive "need-for-speed" engines of the late '60s were out, and fuel efficient compacts were in. By 1980, American manufacturers were churning out some of the most feature laden, yet smallest and most fuel efficient cars they had ever built. This exhaustive reference work details every model from each of the major American manufacturers from model years 1973 through 1980, including various "captive imports" (e.g. Dodge's Colt, built by Mitsubishi.) Within each model year, it reports on each manufacturer's significant news and details every model offered: its specifications, powertrain offerings, prices, standard features, major options, and production figures, among other facts. The work is heavily illustrated with approximately 1,300 photographs.

THE BESTSELLING AUTHOR OF PITCH ANYTHING IS BACK TO FLIP YOUR ENTIRE APPROACH TO PERSUASION. Is there anything worse than a high-pressure salesperson pushing you to say "yes" (then sign on the dotted line) before you're ready? If there's one lesson Oren Klaff has learned over decades of pitching, presenting, and closing long-shot, high-stakes deals, it's that people are sick of being marketed and sold to. Most of all, they hate being told what to think. The more you push them, the more they resist. What people love, however, is coming up with a great idea on their own, even if it's the idea you were guiding them to

have all along. Often, the only way to get someone to sign is to make them feel like they're smarter than you. That's why Oren is throwing out the old playbook on persuasion. Instead, he'll show you a new approach that works on this simple insight: Everyone trusts their own ideas. If, rather than pushing your idea on your buyer, you can guide them to discover it on their own, they'll believe it, trust it, and get excited about it. Then they'll buy in and feel good about the chance to work with you. That might sound easier said than done, but Oren has taught thousands of people how to do it with a series of simple steps that anyone can follow in any situation. And as you'll see in this book, Oren has been in a lot of different situations. He'll show you how he got a billionaire to take him seriously, how he got a venture capital firm to cough up capital, and how he made a skeptical Swiss banker see him as an expert in banking. He'll even show you how to become so compelling that buyers are even more attracted to you than to your product. These days, it's not enough to make a great pitch. To get attention, create trust, and close the deal, you need to flip the script.

Do you have a positive view of getting older? It matters. Like many baby boomers her age, Kathy Gottberg started wondering if it was all down hill after turning 60. Instead, she gladly discovered that how each of us views the aging process strongly influences our health and happiness in the years to come. Now rather than

seeing her advancing years from the perspective of decline and disease, Kathy is happy to share in the pages of this book how the vast majority of people can and do remain reasonably healthy, active and thriving for the remainder of their lives. How did we get it wrong? Until recently, most studies of people as they aged came from insurance companies, drug companies or doctors who specialized in geriatric care. Like the psychology field, research in the past often focused on pathologies, what didn't work, or what went wrong. Fortunately, that is changing. Now many groups, organizations, and scientists are looking into what makes for a long and healthy future no matter what the age. Instead of only seeking ways to make our final years merely comfortable, the attention is now being put on what helps us to continue to grow and thrive. When we choose to see aging from this new positive perspective, each of us is granted the opportunity to celebrate the many benefits of what is now being called "the third age" of life. Who will benefit from reading this book? Certainly, those at age 50 and beyond will find inspiration. But those just hitting midlife should also find encouragement. After all, the more we tell those younger than us that aging can be wonderful, fulfilling, and liberating, the better. Then instead of worrying about what is coming as we age, holding a positive perspective is sure to keep our minds and options open to the possible. And as the saying goes, like fine wine, we will just get better with age. Positive Aging-A SMART Living Guide 365 to Thriving & Wellbeing At Any Age is a collection of blog posts written by Kathy Gottberg on her blog SMART Living 365.com during the last five years. These articles address some of her best ideas about the topic

and tie into how each of us can fearlessly embrace our age and look forward to the days to come.

NoLab is a novel with a comic bent; it's a crime story, a buddy "flick," an art world commentary, a love story. NoLab might be what happens when Lethal Weapon is crossed with My Dinner with Andre. Artists Ray Lawson and Victor Florian search for NoLab, a collaborative of artist provocateurs that has gone missing. Their search becomes a romp through the art and ideas of a progressive, conceptually oriented subculture of the art world. They investigate Carter Wilkinson, creator of The Institute (a shadowy, futuristic cultural institution with an unusual collection). Though seemingly inept as detectives, Ray and Victor eventually succeed in finding the members of NoLab. Murder intervenes. Ray, Victor, and NoLab are harassed and threatened by various individuals attempting to dissuade NoLab from implementing its ill-advised plan. From the presumed safety of home, Ray and his newly acquired family watch the gory ramifications of NoLab's self-destructive act unfold in the media.

Among all the great discoveries and inventions of the nineteenth century, few offer us a more fascinating insight into Victorian society than the discovery of anaesthesia. Now considered to be one of the greatest inventions for humanity since the printing press, anaesthesia offered pain-free operations, childbirth with

reduced suffering, and instant access to the world beyond consciousness. And yet, upon its introduction, Victorian medics, moralists, clergymen, and scientists, were plunged into turmoil. This vivid and engaging account of the early days of anaesthesia unravels some key moments in medical history: from Humphry Davy's early experiments with nitrous oxide and the dramas that drove the discovery of ether anaesthesia in America, to the outrage provoked by Queen Victoria's use of chloroform during the birth of Prince Leopold. And there are grisly ones too: frequent deaths, and even notorious murders. Interweaved throughout the story, a fascinating social change is revealed. For anaesthesia caused the Victorians to rethink concepts of pain, sexuality, and the links between mind and body. From this turmoil, a profound change in attitudes began to be realised, as the view that physical suffering could, and should, be prevented permeated through society, most tellingly at first in prisons and schools where pain was used as a method of social control. In this way, the discovery of anaesthesia left not only a medical and scientific legacy that changed the world, but a compassionate one too.

Following a deadly car crash, small-town lawyer Lance Cooper risked everything to battle one of the most powerful auto corporations in the world to get justice for a young woman. A fast-paced, journalistic account of tragedy turned to triumph, despair to hope, Cobalt Cover-Up is an inspirational, thoroughly compelling, and

victorious read. In the midst of his own family struggles, small-town Georgia lawyer Lance Cooper agreed to defend Ken and Beth Melton and investigate the deadly accident that killed their daughter Brooke after she inexplicably lost control of her Chevy Cobalt. But what started as a heartbreaking yet all too common lawsuit quickly escalated into a David vs. Goliath case when Cooper discovered shocking evidence that General Motors concealed an ignition switch defect for nearly a decade--resulting in 124 deaths, including Brooke's, and risking the lives of millions more. Despite GM's settlement offers and attempts to bury evidence, Cooper refused to back down and worked tirelessly to expose the truth. Locked in a tenacious legal fight, Cooper and the Meltons faced incredible odds--Ken and Beth losing jobs and suffering the difficulty of grieving a beloved daughter during a court battle, Cooper risking his reputation and private practice against the overwhelming opposition from GM's team of lawyers, and both parties facing massive financial strain. Yet, in the relentless pursuit for justice and to protect future innocent lives, this small-town lawyer and a working-class American couple stared down the biggest US auto manufacturing mogul and ultimately transformed the entire industry.

Why We Need the Commons A huge part of our economy is invisible, invaluable, and under siege. This is “the commons,” a term that denotes everything we share. Some parts of the commons are gifts of nature: the air and oceans, the web of species, wilderness, and watersheds. Others are the product of human creativity and endeavor: sidewalks and public spaces, the Internet, our languages, cultures, and technologies. Jonathan Rowe illuminates the scale and value of the commons, its symbiotic relationship with the rest of our economy, its importance to our personal and planetary well-being, and how it is threatened by privatization and neglect. He unifies many seemingly disparate struggles—against pollution, excessive development, corporate marketing to children, and more—with the force of this powerful idea. And he calls for new institutions that create a durable balance between the commons and the profit-seeking side of our economy. “This elegant book is a wonderful introduction to the originality of thought, clarity of expression, and humanity of vision that made Jonathan Rowe so respected by those who knew him. It will change the way you think about economic, environmental and social problems and how to solve them. “ — James Fallows, national correspondent, *The Atlantic* “Jonathan Rowe describes the emerging movement to protect the vast commonwealth owned by the people. Gird yourself

to see nature and human ingenuity in a very different light. Then open these pages and a whole new world will come into focus.” —Ralph Nader “There is an economics of common wealth. Common wealth can and must be managed. That is Jon Rowe’s gift to us.” --George Lakoff, Professor of Cognitive Science and Linguistics, University of California at Berkeley and author of Don’t Think of an Elephant
