The Best 168 Medical Schools, 2013 Edition

"The economics of American higher education are driven by one key factor--the availability of students willing to pay tuition--and many related factors that determine what schools they attend. By digging into the data, economist Nathan Grawe has created probability models for predicting college attendance. What he sees are alarming events on the horizon that every college and university needs to understand. Overall, he spots demographic patterns that are tilting the US population toward the Hispanic southwest. Moreover, since 2007, fertility rates have fallen by 12 percent. Higher education analysts recognize the destabilizing potential of these trends. However, existing work fails to adjust headcounts for college attendance probabilities and makes no systematic attempt to distinguish demand by institution type. This book analyzes demand forecasts by institution type and rank, disaggregating by demographic groups. Its findings often contradict the dominant narrative: while many schools face painful contractions, demand for elite schools is expected to grow by 15+ percent. Geographic and racial profiles will shift only slightly--and attendance by Asians, not Hispanics, will grow most. Grawe also use the model to consider possible changes in institutional recruitment strategies and government policies. These "what if" analyses show that even aggressive innovation is unlikely to overcome trends toward larger gaps across racial, family income, and parent education groups. Aimed at administrators and trustees with responsibility for decisions ranging from admissions to student

support to tenure practices to facilities construction, this book offers data to inform decision-making--decisions that will determine institutional success in meeting demographic challenges"--

The new graduate student must select a graduate committee, plan course work, find an original research topic, and design a research plan that ultimately leads to a defensible thesis or series of publishable research articles. Whether a graduate student plans a research career or not, he or she typically must complete an original, independent, analytical study, even though few beginning students know how or where to begin. A little help would be good, right? This process-oriented manual holds the fundamentals students in the sciences need to trek the graduate school path—it is their “backpack.” Open it and see what it can do for you.

An eye-opening and timely look at how colleges drive the very inequalities they are meant to remedy, complete with a call—and a vision—for change. Colleges fiercely defend America's deeply stratified higher education system, arguing that the most exclusive schools reward the brightest kids who have worked hard to get there. But it doesn't actually work this way. As the recent college-admissions bribery scandal demonstrates, social inequalities and colleges' pursuit of wealth and prestige stack the deck in favor of the children of privilege. For education scholar and critic Anthony P. Carnevale, it's clear that colleges are not the places of aspiration and equal opportunity they claim to be. *The Merit Myth* calls out our elite colleges for what they are: institutions that pay lip service to social mobility and meritocracy, while offering little of either. Through policies that exacerbate inequality, including

generously funding so-called merit-based aid for already-wealthy students rather than expanding opportunity for those who need it most, U.S. universities—the presumed pathway to a better financial future—are woefully complicit in reproducing the racial and class privilege across generations that they pretend to abhor. This timely and incisive book argues for unrigging the game by dramatically reducing the weight of the SAT/ACT; measuring colleges by their outcomes, not their inputs; designing affirmative action plans that take into consideration both race and class; and making 14 the new 12—guaranteeing every American a public K-14 education. The Merit Myth shows the way for higher education to become the beacon of opportunity it was intended to be.

The College Handbook, 1996

In a time when crossing guards are posted to prevent high schoolers from jumping in front of trains and parents shelling out \$100K for packaged college applications, education has become a mad race to grab the Ivy ring. Based on experience in admissions with the Ivy League and other highly competitive universities, emerging scientific evidence on the impact of emotional intelligence and mindfulness, and discussions with admissions officers, students, families, and high school counselors, this book is a guide on how to go through the existing, however brutish, college applications process with less stress and anxiety, and more joy and mindfulness. Equipped with the powerful tools of emotional intelligence and

mindfulness, this work acknowledges the reality of what the process is, and challenges young people to reach for a more meaningful ideal for themselves. This book shares a look at the holistic admissions process and offers an alternative one to the current climate of untenable stress. This updated model aims to shift mindsets from treating the admissions process as a ruthless competition with one externally-prescribed definition of success, to a step in a lifelong journey of curiosity and wonder. By building self-awareness, compassion, resilience, it's possible to navigate the process with greater authenticity, balance, and joy.

The Mindful College Applicant

The first book to tell the story of the Advanced Placement program, the gold standard for academic rigor in American high schools The Advanced Placement program stands as the foremost source of college-level academics for millions of high school students in the United States and beyond. More than 22,000 schools now participate in it, across nearly forty subjects, from Latin and art to calculus and computer science. Yet remarkably little has been known about how this nongovernmental program became one of the greatest success stories in K-12 education—until now. In *Learning in the Fast Lane*, Chester Finn and Andrew Scanlan, two of the country's most respected education analysts, offer a groundbreaking account of one of the most important educational initiatives of our time. *Learning in the Fast Lane* traces the story of AP from its mid-twentieth-century origins as a niche benefit for privileged students to its emergence as a springboard to college for high schoolers nationwide, including hundreds of thousands of disadvantaged youth. Today, AP not only opens new intellectual horizons for smart teenagers, but also strengthens school ratings, attracts topflight teachers, and draws support from philanthropists, reformers, and policymakers. At the same time, it faces numerous challenges, including rival programs, curriculum wars, charges of elitism, the misgivings of influential universities, and the difficulty of infusing rigor into schools that lack it. In today's polarized climate, can AP

maintain its lofty standards and surmount the problems that have sunk so many other bold education ventures? Richly documented and thoroughly accessible, Learning in the Fast Lane is a must-read for anyone with a stake in the American school system.

opportunity to young Americans seeking to improve their station in life? *The Years That Matter Most* tells the stories of students trying to find their way, with hope, joy, and frustration, through the application process and into college. Drawing on new research, the book reveals how the landscape of higher education has shifted in recent decades and exposes the hidden truths of how the system works and whom it works for. And it introduces us to the people who really make higher education go: admissions directors trying to balance the class and balance the budget, College Board officials scrambling to defend the SAT in the face of mounting evidence that it favors the wealthy, researchers working to unlock the mysteries of the college-student brain, and educators trying to transform potential dropouts into successful graduates. With insight, humor, and passion, Paul Tough takes readers on a journey from Ivy League seminar rooms to community college welding shops, from giant public flagship universities to tiny experimental storefront colleges. Whether you are facing your own decision about college or simply care about the American promise of social mobility, *The Years That Matter Most* will change the way you think—not just about higher education, but about the nation itself.

Assessment has provided educational institutions with information about student learning outcomes and the quality of education for many decades. But has it informed practice and been fully incorporated into the learning cycle? Conrad and Openo argue that the potential inherent in many of the new learning environments

being explored by educators and students has not been fully realized. In this investigation of a variety of assessment methods and learning approaches, the authors aim to discover the tools that engage learners and authentically evaluate education. They insist that moving to new learning environments, specifically those online and at a distance, afford opportunities for educators to adopt only the best practices of traditional face-to-face assessment while exploring evaluation tools made available by a digital learning environment in the hopes of arriving at methods that capture the widest set of learner skills and attributes.

backgrounds, schools, and experiences, standardized college admissions tests are now criticized for being hopelessly biased in favor of traditionally privileged groups. Out of this has emerged the test-optional movement that seeks to allow students to apply to schools without sitting through the rigors of the SAT. This book takes a step back and applies rigorous empirical measurements to these rival claims. Drawing upon the expertise of higher education researchers, admissions officers, enrollment managers, and policy professionals, this edited volume is among the first to investigate the research and policy implications of test-optional practices. It was conceived in response to the editors' frustration with the fragmented and incomplete state of the literature around the contemporary debate on college admissions testing. Many students, teachers, parents, policymakers--frankly, nearly anyone immediately outside the testing industry and college admissions--have little understanding of how admissions tests are used. This lack of transparency has often fueled beliefs that college assessments are biased, misused, or overused. Decades of research on various aspects of testing, such as the predictive validity of assessments, makes a compelling case for their value. But all-too-frequently researchers and admissions officers talk past one another instead of engaging substantively. This collection intends to remedy the situation by bringing these disparate voices together. This book is designed for provosts, enrollment managers, and college admissions officers seeking to strike the proper balance between uniformity and fairness"--

New York Times Book Review Editor's Choice; Real Simple Best of the Month; Library Journal Editors' Pick In the spirit of *Battle Hymn of the Tiger Mother*, *Bringing up Bébé*, and *The Smartest Kids in the World*, a hard-hitting exploration of China's widely acclaimed yet insular education system—held up as a model of academic and behavioral excellence—that raises important questions for the future of American parenting and education. When students in Shanghai rose to the top of international rankings in 2009, Americans feared that they were being "out-educated" by the rising super power. An American journalist of Chinese descent raising a young family in Shanghai, Lenora Chu noticed how well-behaved Chinese children were compared to her boisterous toddler. How did the Chinese create their academic super-achievers? Would their little boy benefit from Chinese school? Chu and her husband decided to enroll three-year-old Rainer in China's state-run public school system. The results were positive—her son quickly settled down, became fluent in Mandarin, and enjoyed his friends—but she also began to notice troubling new behaviors. Wondering what was happening behind closed classroom doors, she embarked on an exploratory journey, interviewing Chinese parents, teachers and education professors, and following students at all stages of their education. What she discovered is a military-like education system driven by high-stakes testing, with teachers posting rankings in public, using bribes to reward students who comply, and shaming to isolate those who do not. At the same time, she

uncovered a years-long desire by government to alleviate its students' crushing academic burden and make education friendlier for all. The more she learns, the more she wonders: Are Chinese children—and her son—paying too high a price for their obedience and the promise of future academic prowess? Is there a way to appropriate the excellence of the system but dispense with the bad? What, if anything, could Westerners learn from China's education journey? Chu's eye-opening investigation challenges our assumptions and asks us to consider the true value and purpose of education.

How has the dominant social scientific paradigm limited our understanding of the impact of inherited economic resources, social privilege, and sociocultural practices on multigenerational inequality? In what ways might multiple forces of social difference haunt quantitative measurements of ability such as the SAT? Building on new materialist philosophy, *Inheriting Possibility* rethinks methods of quantification and theories of social reproduction in education, demonstrating that test performance results and parenting practices convey the impact of materially and historically contingent patterns of differential possibility. Ezekiel J. Dixon-Román explores the dualism of nature and culture that has undergirded theories of inheritance, social reproduction, and human learning and development. Research and debate on the reproduction of power relations have rested on a premise that nature is made up of fixed universals on which the creative, intellectual, and discursive play of culture are based. Drawing on recent work in the physical and biological sciences, Dixon-Román argues that nature is culture. He contends that by assuming a rigid nature/culture binary, we ultimately limit our understanding of how power relations are reproduced. Through innovative analyses of empirical data and cultural artifacts, Dixon-Román boldly reconsiders how we conceptualize the processes of inheritance and approach social inquiry in order to profoundly sharpen understanding and address the reproducing forces of inequality.

Choosing College

Cut through the noise and make better college and career choices This book is about addressing the college-choosing problem. The rankings, metrics, analytics, college visits, and advice that we use today to help us make these decisions are out of step with the progress individual students are trying to make. They don't give students and families the information and context they need to make such a high-stakes decision about whether and where to get an education. Choosing College strips away the noise to help you understand why you're going to school. What's driving you? What are you trying to accomplish? Once you know why, the book will help you make better choices. The research in this book illustrates that choosing a school is complicated. By constructing more than 200 mini-documentaries of how students chose different postsecondary educational experiences, the authors explore the motivations for how and why people make the decisions that they do at a much deeper, causal level. By the end, you'll know why you're going and what you're really chasing. The book: Identifies the five
