Identifying the Jeep CJ series vehicles as the most popular off-road vehicles of all time may actually qualify as an understatement. They really are that popular. The CJ series arguably started after World War II with the CJ-2A being introduced to the masses, and while the early CJs have their share of enthusiasts, the largest group of enthusiasts began their love affair with the AMC-powered Jeep CJ-5s beginning in 1972. Joined by the longer-wheelbase CJ-7 models introduced in 1976, the CJ models were wildly popular through their discontinuation in 1986, when the Wrangler was introduced. These were the only models originally equipped with V-8 engines in any meaningful way. This era combined the ruggedness of the early Jeeps with some of the advancements and horsepower of a more modern era; it makes a platform that is both fun to own and to modify. Jeep guru Michael Hanssen covers all of the systems that can be upgraded to improve your Jeep's performance. Upgrades include suspension components such as springs, shocks, and steering modifications; driveline components including differentials, transmissions, transfer cases, and axles; engine upgrades including engine swaps; wheel and tire upgrades; aftermarket accessories; and armor such as skid plates, bumpers, brake upgrades, and more. Whether you are looking to get into serious off-roading or just want to make your classic CJ a little more fun, this book will be a valuable tool in your shop or library. p.p1 {margin: 0.0px 0.0px 0.0px 0.0px; font: 12.0px Arial}

## **Guide to the World Dental Industry**

This book reminds the reader that many police shootings occur during diminished light, and with few exceptions, officers do not receive enough training in these conditions; in addition, recommendations are made for officers to use senses other than vision, teamwork, and technological innovations to increase an officer's chance of success when working in dim-light or no-light conditions. The majority of crimes and officer shootings occur at night in diminished light or no-light settings. The Federal Bureau of Investigation reports that during a 9-year period (1985-1994), almost 63 percent of police officer deaths occurred between 6:00 p.m. and 6:00 a.m. During these hours, it is difficult for officers to accurately identify an alleged suspect's face easily or identify any weapons he or she may be in possession of. Add stress and an increased heart rate to an already tense situation and it is easy to understand the need for additional training under these conditions. The dark is fraught with peril and danger, but increased training can alleviate stress and increase proficiency. Moreover, officers can rely upon other senses and additional training can help facilitate decision-making under these difficult circumstances. Technological advances and team techniques can also be incorporated into officer training. Directional microphones, night vision and thermal imaging devices and infrared lights are a few of the technological advances that may aid officer shootings during dim-light or no-light environments.
