## Ancient Olympic Games

Astronomy has never been a more popular pastime than it is today. The increased availability of less expensive, more powerful, and more sophisticated telescopes has given rise to a new generation of stargazers. And for these beginning astronomers here is the comprehensive book covering everything from the difficult task of selecting an instrument to the equally daunting choices that arise when a telescope is turned to the heavens. Renowned British astronomer and author James Muirden takes the fledgling astronomer by the hand in his new book,

offering tips on: \* the purchase, assembly, and orientation of your new telescope \* how to observe and chart the Sun, Moon, planets, stars and comets \* how to investigate the deep-sky objects -- clusters, nebulae, and other galaxies beyond the Milky Way The final chapter, "Windows into Space," explores ten carefully selected regions featuring noteworthy examples of double stars, galaxies, and nebulae, as well as more obscure objects seldom examined by astronomers. How to Use an Astronomical Telescope offers completely revised and updated location charts with detailed coordinates, tables, appendixes, and numerous illustrations and photographs, making it the essential volume for one's first exploration of the cosmos.

A “cinematic . . . page-turner and a compassionate analysis of faith, memory, responsibility, and consequence.”—Molly Antopol, Fiction Writers Review

Inspired by and structured around the chamber piece of the same title by the French composer Olivier Messiaen, *Quartet for the End of Time* is a mesmerizing story of four lives irrevocably linked in a single act of betrayal. The novel takes us on an unforgettable journey beginning during the 1930s Bonus Army riots, when World War I veteran Arthur Sinclair is falsely accused of conspiracy and then disappears. His absence will haunt his son, Douglas, as well as Alden and Sutton Kelly, the children of a powerful U.S. congressman, as they experience—each in different ways—the dynamic political social changes that took place leading up to and during World War II. From the New Deal projects through which Douglas, newly fatherless, makes his living to Sutton’s work as a journalist, to Alden’s life as a code breaker and a spy, each character is haunted by the past and is searching for love, hope, and redemption in a world torn apart by chaos and war. Through the

lives of these characters, as well as those of their lovers, friends, and enemies, the novel transports us from the Siberian Expedition of World War I to the underground world of a Soviet spy in the 1920s and 1930s, to the occultist circle of P. D. Ouspensky and London during the Blitz, to the German prison camp where Messiaen originally composed and performed his famous Quartet for the End of Time. At every turn, this rich and ambitious novel tells some of the less well-known stories of twentieth-century history with epic scope and astonishing power, revealing at every turn the ways in which history and memory tend to follow us, and in which absence has a palpable presence.

This volume explores the potential of employing a relational paradigm for the purposes of interdisciplinary exchange. Bringing together scholars from the social sciences, philosophy and theology, it seeks to bridge the gap between subject areas by focusing on real phenomena. Although these phenomena are studied by different disciplines, the editors demonstrate that it is also possible to study them from a common relational perspective that connects the different languages, theories and perspectives which characterize each discipline, by going beyond their differences to the core of reality itself. As an experimental collection that highlights the potential that exists for cross-disciplinary work, this volume will appeal to scholars across a range of field concerned with critical realist approaches to research, collaborative work across subjects and the manner in which disciplines can offer one another new insights.

At the end of 1912 Jacques Schneider announced his

intention of presenting an annual trophy for an international seaplane contest. There were only twelve Schneider contests but they were major international events with the major rivals being Britain and Italy, followed by France and the US. Biplane seaplanes and flying-boats predominated the early contests and some very advanced twin-float biplanes were among the winners as late as 1925. However, it was the monoplane which was to become the symbol of Schneider Trophy, with Supermarine and Macchi designs reaching the peak of racing seaplane performance. The final winning combination of Supermarine airframe and Rolls-Royce engine was to make a vital contribution to Britain's defence in 1940 in the form of the Rolls-Royce powered Hurricane and Spitfire. This book records the contests and, in considerable detail, the design, development and achievements of the participating aircraft; those which failed to take part; and the projects, some of which embodied very advanced ideas even if they were proved to be unrealistic.
