Clean Air

Written for researchers and practitioners in environmental pollution, management and ecology, this interdisciplinary account explores the ecological issues associated with industrial pollution to provide a complete picture of this important environmental problem from cause to effect to solution. Bringing together diverse viewpoints from academia and environmental agencies and regulators, the contributors cover such topics as biological resources of mining areas, biomonitoring of freshwater and marine ecosystems and risk assessment of contaminated land in order to explore important questions such as: What are the effects of pollutants on functional ecology and ecosystems? Do current monitoring techniques accurately signal the extent of industrial pollution? Does existing policy

provide a coherent and practicable approach? Case studies from throughout the world illustrate major themes and provide valuable insights into the positive and negative effects of industrial pollution, the provision of appropriate monitoring schemes and the design of remediation and restoration strategies.

Factory Operations

In the business world, especially in manufacturing or quality management, the term Six Sigma usually refers to a set of tools and methodologies developed by Motorola to improve processes by eliminating defects. So why should the HR professional care what Six Sigma is or how it can be applied in the HR function? According to the specialists at Orion Partners, there are ten key reasons: * to create excellence in process delivery; * to reduce defects; * to increase efficiency; * to create a quality focused mindset; * to benefit from best practice; * to bring clarity to the processes of HR; * to use a structured scientific approach; * to speak the same language and improve communication; * to gain control over your processes; * and to strengthen your business case. Mircea Albeanu and Ian Hunter explain some of the basic concepts to show how applying Six Sigma tools and methodologies can be used to manage the practical challenges of improving HR operations to meet your organization's expectations at a lower cost and with greater efficiency. To help illustrate some of the key messages examples are drawn from Orion Partners' work using Six Sigma tools with international organizations over the last seven years. This concise guide is ideal for project and programme managers involved in business transformation, and for HR managers as well as Six Sigma specialists seeking to understand its applications within human resources. About The Gower HR Transformation Series: The Human Resources function faces a continuing challenge to its role and purpose, in many organizations it has suffered from serious under-representation at strategic, board level. Yet, faced with the challenges of globalism, the need to innovate, manage knowledge, attract and retain the very best employees, organizations need an HR function that can lead from the front. The process of transforming the function is complex and rarely linear. It includes the practical challenges of improving HR operations to meet customer expectations at lower cost and with greater efficiency. The Gower HR Transformation Series will help; it uses a blend of

conceptual frameworks, practical advice and global case study examples to cover each of the main elements of the HR transformation process. The books in the series follow a standard format to make them easy to read and reference. Together, the titles create a definitive guide from one of the leading specialist HR transformation consultancies; an organization that has been involved in HR transformation for clients as diverse as Bombardier Transportation, Marks & Spencer, Barnardo's, Oxfam, Schrodgers, UnitedHealth Group, Nestlé, BP, HM Prison Service, Transport for London and Vodafone.

2nd International Conference on River Flood Hydraulics

Government Reports Announcements & Index

On the basis of a report by the Comptroller and Auditor General (HC 528 2006-07) the Committee examined how well the Environment Agency carries out its role to protect people and properties from the risk of flooding and whether it adequately monitors and maintains the standards of existing flood defence systems. They concluded that the Agency was unable to show its maintenance teams were deployed efficiently or that they focused their resources on high risk flood defence systems. They could make more effective use of their existing funding by: better prioritisation, aided by enhanced management information systems; better targeting of resources based on flood risk in different parts of the country; and reducing the programme and project development costs of constructing defences.

Hospital Management, Planning and Equipment

Our understanding of river flooding is increasing rapidly thanks to worldwide research efforts into the numerous hydrological, hydraulic and morphological processes which occur during flood events. There is a continual improvement in modelling technologies to predict and simulate these important processes, aided by advances in computer power and speed. These are the proceedings of an international conference whose aim was to promulgate new ideas and to pool the knowledge of international experts on river flooding.
