This volume presents a collection of papers on techniques and case studies in land surface evaluation for engineering practice written by specialist practitioners in the field. The volume arose out of deliberations by the Second Working Party on Land Surface Evaluation set up by the engineering group of the Geological Society in January 1997 and chaired by Dr J.S. Griffiths. The book provides examples of cost-effective methods for collecting land surface and near surface data prior to carrying further detailed ground investigations of engineering sites.

Investment Risk Management

In recent years, the IMF has released a growing number of reports and other documents covering economic and financial developments and trends in member countries. Each report, prepared by a staff team after discussions with government officials, is published at the option of the member country.

Operational Risk Management

All investments carry with them some degree of risk. In the financial world, individuals, professional money managers, financial institutions, and many others encounter and must deal with risk. Risk management

is a process of determining what risks exist in an investment and then handling those risks in the best-suited way. This is important because it can reduce or augment risk depending on the goals of investors and portfolio managers. The main purpose of Investment Risk Management is to provide an overview of developments in risk management and a synthesis of research involving these developments. The book examines ways to alter exposures through measuring and managing those exposures and provides an understanding of the latest strategies and trends within risk management. The scope of the coverage is broad and encompasses the most important aspects of investment risk management. Its 30 chapters are organized into six sections: (1) foundations of risk management, (2) types of risk, (3) quantitative assessment of risk, (4) risk and risk classes, (5) hedging risk and (6) going forward. The book should be of particular interest to sophisticated practitioners, investors, academics, and graduate finance students. Investment Risk Management provides a fresh look at this intriguing but complex subject.

Landslide Science and Practice

In a large sample of East Asian nonfinancial corporations, firms using foreign currency derivatives had distinctive characteristics, such as larger size and foreign debt exposures. Unlike in studies of U.S. firms, there was only weak evidence that liquidity-constrained firms with greater growth opportunities hedged more. Firms appeared to use foreign earnings as a substitute for hedging with derivatives, and to

engage in "selective" hedging. There was no evidence that East Asian firms eliminated their foreign exchange exposure by using derivatives. And firms using derivatives before the crisis performed just as poorly as nonhedgers during the crisis.

Introduction to Public Health E-Book

In 2003, the Asian Roundtable on Corporate Governance produced recommendations to improve corporate governance in Asia. This report summarises the results of a stocktaking exercise to determine progress made to date and the challenges remaining in the implementation of these recommendations.

Hong Kong Real Estate - Issues for Responsible Investors

This book contains peer-reviewed papers from the Second World Landslide Forum, organised by the International Consortium on Landslides (ICL), that took place in September 2011. The entire material from the conference has been split into seven volumes, this one is the sixth: 1. Landslide Inventory and Susceptibility and Hazard Zoning, 2. Early Warning, Instrumentation and Monitoring, 3. Spatial Analysis and Modelling, 4. Global Environmental Change, 5. Complex Environment, 6. Risk Assessment, Management and Mitigation, 7. Social and Economic Impact and Policies.

This eBook is designed to provide the reader with accurate analyses of the AML/CTF Financial and Legal Intelligence, law and practice in the nations of the world with the most current references and resources. The eBook is organized around five main themes: 1. Money Laundering Risk and Compliance; 2. The Law of Anti-Money Laundering and Compliance; 3. Criminal and Civil Forfeiture; 4. Compliance and 5. International Cooperation. Each chapter is made up of five parts. Part I, "Introduction," begins with the analysis of money laundering risks and compliance with the recommendations of the Financial Action Task Force (FATF), and then concludes with the country's rating based on the International Narcotics Control Strategy Report (INCSR) of the U.S. State Department. Part II, "Anti-Money Laundering and Combating Terrorist Financing (AML/CTF)" and Part III, "Criminal and Civil Forfeiture," evaluate the judicial and legislative structures of the country. Given the increasing global dimension of AML/CTF activities, these sections give special attention to how a country has created statutes, decisions, policies and the judicial enforcement procedures needed to combat money laundering and terrorist financing. Part IV, "Compliance," examines the most critical processes for the prevention and detection of money laundering and terrorist financing. This section reflects on the practical elements that should be in place so that financial institutions can comply with AML/CTF requirements; these are categorized into the development and implementation of internal controls, policies and procedures. Part V, "International Cooperation," reviews the compilation of international laws and treaties between countries working together

and rapidly over the past few years. Unheard of just a few years ago, corporate intranets are now used for everything from job postings to enhanced team communications. Whole new departments are being created to support e-commerce. And the Internet/Intranet/Extranet triple-whammy is the most critical component of most financial IT shops. At the same time, new intelligent agents stand ready to take on such diverse functions as customer profiling and data mining. Get a handle on all these new and newer ripples with Handbook of Technology in Financial Services. Here, in this exhaustive new guide and reference book, industry guru Jessica Keyes gives you the no-nonsense scoop on not just the tried and true IT tools of today, but also the up-and-coming "hot" technologies of tomorrow, and how to plan for them. Keyes gives you extensive, example-driven explanations of such topics as: digital check imaging and Internet-based billing e-commerce and Internet banking portfolio management systems for the 21st century GIS technology in financial services and much more. Focusing on problems from both a technology perspective and a business perspective, the Handbook also addresses challenges and solutions associated with: supporting the self-service revolution by servicing kiosks and ATMs efficiently and economically straight-through processing for the securities industry outsourcing business communications in the insurance industry distributed integration as a cost-effective alternative to data warehousing and putting inbound fax automation to work in financial organizations. IT Security and Risk Management is an original textbook written for undergraduate subjects on IT and e-business security, usually offered under a MIS, IT or eBusiness degree program. The text addresses the business implications and requirements of security rather than presenting a technical, programming approach that is generally aligned to studying computer science. This new text address security technology and systems, issues associated with risk minimization and management when implementing security systems, legal and regulatory requirements, basic Cryptography and Public Key Infrastructure, ethics, forensics and fraud, and the intrinsic relationship between business strategy and security systems, such as electronic payment systems, supply chain management and internal/external firewalls.

The Hong Kong securities market is a significant international market, ranking sixth in the world in terms of capitalization. This new work presents a comprehensive and critical examination of the laws and norms regulating listed companies, their equity securities and other participants in this market. Four major themes, highlighting the difficulties in making Anglo-American corporate and securities laws fit fundamentally different markets, underlie the author's analysis. First, to ensure investor protection, corporate law and securities regulations have to be formulated as one integral law. Second, rules of corporate governance prevailing in Anglo-Saxon jurisdictions have to be adapted to Hong Kong's different corporate structures. Third, particular attention must be paid to problems of enforcement

given the difficulties inherent in a self-regulatory regime and the absence of a contingency fee system. Fourth, specific solutions are required to address the problems posed by internationalization. This critical analysis is of significant comparative interest and provides essential reading for corporate and securities lawyers in Asia and throughout the world.
