### Engineering Polymer Systems for Improved Drug Delivery

"This volume brings together an innovative set of readings of complex interactions between Australian Aboriginal people and colonisers. It has its origins in 2003 when Mark Hannah, then a doctoral student in the Centre for Cross Cultural Research at The Australian National University, invited a group of early career scholars to meet in Canberra. They brought their diverse social science and humanities backgrounds to the uncovering of creative Indigenous responses to the colonial encounter in Australia, and fresh ways of writing about these. Their studies were focused in diverse parts of Australia and on different time periods, but shared a common interest in developing critical re-assessments of Australian colonial and anti-colonial histories. Their meeting encouraged face-to-face exchanges that could short-circuit the isolation often experienced by cross-disciplinary, original scholars.

It also emphasised writerly aspects of creative thinking, promoting the portrayal of character, alternative prose styles and inventive narrative forms. The authors' responses to these invitations have flavoured the commissioned papers presented here. The critical and creative drives which inform them shines out in their writing. They are exciting and sometimes surprising in the angles they take, and the cross-overs of genre or subject that they offer."--Provided by publisher.

What does it mean to say that Native peoples exist in the present? In *Beyond Settler Time* Mark Rifkin investigates the dangers of seeking to include Indigenous

peoples within settler temporal frameworks. Claims that Native peoples should be recognized as coeval with Euro-Americans, Rifkin argues, implicitly treat dominant non-native ideologies and institutions as the basis for defining time itself. How, though, can Native peoples be understood as dynamic and changing while also not assuming that they belong to a present inherently shared with non-natives? Drawing on physics, phenomenology, queer studies, and postcolonial theory, Rifkin develops the concept of "settler time" to address how Native peoples are both consigned to the past and inserted into the present in ways that normalize non-native histories, geographies, and expectations. Through analysis of various kinds of texts, including government documents, film, fiction, and autobiography, he explores how Native experiences of time exceed and defy such settler impositions. In underscoring the existence of multiple temporalities, Rifkin illustrates how time plays a crucial role in Indigenous peoples' expressions of sovereignty and struggles for self-determination.

Cytokine Storm Syndromes, including HLH and MAS, are frequently fatal disorders, particularly if not recognized early and treated during presentation. The genetics of Cytokine Storm Syndromes are being defined with many of the risk alleles giving rise to mutations in the perforin-mediated cytolytic pathway used by CD8 cytotoxic T cells and natural killer cells. These are being studied using murine models. Up to 10% of the general population may carry risk alleles for developing Cytokine Storm Syndromes, and Cytokine Storm Syndromes are being increasingly recognized around the world in pediatric and adult hospitals. A variety of infectious, rheumatic, and oncologic triggers are commonly associated with Cytokine Storm Syndromes, but understanding this disorder is critical for all researchers and physicians to ensure timely and appropriate therapy. This textbook, the first of its kind, addresses all aspects of the disorder – from genetics, pathophysiology, and ongoing research, to clinical presentations, risk factors, and treatment.
