Cet ouvrage, écrit par une enseignante expérimentée, regroupe des exercices par thèmes : - mécanique des fluides, - acoustique, - thermodynamique, - etc. Ces exercices sont extraits d'épreuves de BTS industriels récentes et sont soigneusement corrigés ; ils sont choisis de façon à couvrir un large spectre de connaissances qui figurent sur la plupart des référentiels de BTS industriels. Cet ouvrage sera utile pour réviser avant une épreuve, ou en cours d'année lorsque l'étude d'un thème sera terminée. Les étudiants désirant poursuivre leurs études en IUT pourront également tirer profit de cet ouvrage.

Food and dairy powders are created by dehydrating perishable produce, such as milk, eggs, fruit and meat, in order to extend their shelf life and stabilise them for storage or transport. These powders are in high demand for use as ingredients and as food products in their own right, and are of great economic importance to the food and dairy industry worldwide. Today, the ability to control food and dairy powder quality is a source of key competitive advantage. By varying the dehydration process design, and by controlling the technological and thermodynamic parameters during dehydration, it is possible for manufacturers to engineer the biochemical, microbiological and physical characteristics of the food powder to meet their specific product requirements. This book provides an overview of the existing, adapted or new techniques used to analyse safety and quality in modern food and dairy powders. Based on original research by the authors, the book uses 25 commercial dairy and non-dairy powders to illustrate a range of biochemical and physical methods used to evaluate and characterise powdered food products. Written from a practical perspective, each chapter focuses on a particular analytical technique, outlining the purpose, definition and principle of that method. The authors guide the reader through all of the instruments needed, the safety measures required, and the correct procedures to follow to ensure successful analysis. Instructions on accurate measurement and expression of results are included, and each chapter is richly illustrated with original data and worked examples. *Analytical Methods for Food and Dairy Powders* is a unique step-by-step handbook, which will be required reading for anyone involved in the development and manufacture of powdered food products. Food and dairy scientists based in industry will find it essential for new product development and improved quality control, while researchers in the laboratory will especially value the new techniques it comprises.

Current developments in air pollution modeling are explored as a series of contributions from researchers at the forefront of their field. This newest contribution on air pollution modeling and its application is focused on local, urban, regional and intercontinental modeling; emission modeling and processing; data assimilation and air quality forecasting; model assessment and evaluation; atmospheric aerosols. Additionally, this work also examines the relationship

between air quality and human health and the effects of climate change on air quality. This work is a collection of selected papers presented at the 36th International Technical Meeting on Air Pollution Modeling and its Application, held in Ottawa, Canada, May 14-18, 2018. The book is intended as reference material for students and professors interested in air pollution modeling at the graduate level as well as researchers and professionals involved in developing and utilizing air pollution models.

The International System of Units, universally abbreviated SI, is the modern metric system of measurement. Long the dominant system used in science, the SI is rapidly becoming the dominant measurement system used in international commerce. The definitive international reference on the SI is a document published by the Internat. Bur. of Weights & Measures (BIPM) & often referred to as the SI document. It is in French followed by a text in English. This 2001 ed. is the U.S. version of the English text of the 7th (most current) ed. of the document. It also incorporates the contents of Supplement 2000: addenda & corrigenda to the 7th ed. (1998), pub. by the BIPM in June 2000.
