Indians wryly admit that 'India grows at night'. But that is only half the saying, the full expression is: 'India grows at night when the government sleeps', suggesting that the nation may be rising despite the state. India's is a tale of private success and public failure. Prosperity is, indeed, spreading across the country even as governance failure pervades public life. But how could a nation become one of the world's fastest-growing economies when it's governed by a weak, ineffective state? And wouldn't it be wonderful

if India also grew during the day—in other words, if public policy supported private enterprise? What India needs, Gurcharan Das says, is a strong liberal state. Such a state would have the authority to take quick, decisive action, it would have the rule of law to ensure those actions are legitimate and finally, it would be accountable to the people. But achieving this will not be easy, says Das, because India has historically had a weak state and a strong society. About the Author Gurcharan Das is a well known author, commentator and public intellectual. He is the author of the much acclaimed *The Difficulty of Being Good*, and the international bestseller *India Unbound*, which has been translated into many languages and filmed by the BBC. His other works include the novel, *A Fine Family*, a book of essays, *The Elephant Paradigm*, and an anthology, *Three Plays*, consisting of *Larins Sahib*, *Mira* and *9 Jakhoo Hill*. Gurcharan Das writes a regular column for a number of Indian newspapers including the *Times of India* and occasional guest columns for *Newsweek*, *Wall Street Journal* and *Foreign Affairs*. Gurcharan Das graduated from Harvard University and was CEO of Procter and Gamble India before he took early retirement to become a full time writer. He lives in Delhi.

We know we need to eat better. We know we should be more active. And we know we should be living an all around healthier lifestyle. So why is it so hard to stick to our diet and exercise efforts when we want to lose weight and take back control of our health? Is there a better way to succeed in our health and fitness goals? 'Heavy Brain' is the new release from the MetFlex-Rx Diet creators Tommy Caldwell and Dr. Laura Caria, M.D., and inside the pages of their new book they address how the mind is the root of all fitness failure. This eye opening book teaches the reader how to address and correct foundational issues in the way we think about our health. A task that must be accomplished in order for your diet and exercise efforts to 'stick' and give you long term results. Caldwell and Caria argue that the automatic thought patterns we do not address when trying to lose weight are the true root of the unhealthy habits and behaviours (overeating, snacking, technological distractions, and laziness for example) that we can't seem to gain control over and the real cause of most repeated fitness failures and weight problems. The formula for success that the pair of authors teach inside 'Heavy Brain' is quickly changing the face (and success rate) of the weight loss industry. With insightful weight loss principles and simple step by step instructions for how to set yourself up for life-long success, Heavy Brain may just be the last 'diet' book you ever have to read.

The Minds of Boys

Michael Gurian's blockbuster bestseller *The Wonder of Boys* is the bible for mothers, fathers, and educators on how to understand and raise boys. It has sold over 400,000 copies, been translated into 17 languages, and sells over 25,000 every year, which is more than any other book on boys in history. To follow up on this first book, which launched the boy's movement, he has now written this revolutionary new book which confronts what he and a lot of other parents and teachers in this country truly believe to be a "boy's crisis". Here are the facts: Boys today are simply not learning as well as girls Boys receive 70% of the Ds and Fs given all students Boys cause 90% of classroom discipline problems 80% of all high school dropouts are boys Millions of American boys are on

Ritalin and other mind-bending control drugs Only 40% of college students are boys And three out of four learning disabled students are boys So what can we do? Gurian has the answer in this enormously fascinating and practical book which shows parents and teachers how to help boys overcome their current classroom obstacles by helping to create the proper learning environment, understand how to help boys work with their unique natural gifts, nurture and expand every bit of their potential, and enabling them to succeed in life the way they ought to. Gurian presents a whole new way of solving the problem based on the success of his program in schools across the country, the latest research and application of neuro-biological research on how boys' brains actually work and how they can learn very well if they're properly taught. Anyone who cares about the future of our boys must read this book.

Excerpt from Genealogy of the Greenlee Families in America, Scotland, Ireland and England: With Ancestors of Elizabeth Brooks Greenlee and Emily Brooks Greenlee; Also Genealogical Data on the McDowells of Virginia and Kentucky Whenever it has been possible we have copied wills, records, etc., directly from the originals. Where members or descendants of a family have given different dates, preference has been given to those which seemed most plausible, according to existing circumstances. In many cases where there were no means of determining which information was correct, the

various dates have been given. When Bible records have differed from town records, the latter have been accepted as correct. The work of collecting information regarding different members of the Greenlee Family has unfortunately not been made easier by previous genealogies and we have been obliged to rely on the co-operation of its members for a large portion of the information obtained. We have to thank the descendants generally for their kindness and readiness to assist us in many ways. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Focus on Abortion: Americans Share Their Stories introduces the often-missing and most important voices in the abortion conversation: the voices of those who have experienced abortion. This project provides a platform for these voices to be heard. Sixty individuals are featured. They have had an abortion or are close to the abortion experience, including partners, friends, relatives, counselors, and professionals who provide abortion care. Each person is represented by a photographic portrait and a first-person narrative. The storytellers come from diverse socio-economic backgrounds and generations. They live in urban, suburban and rural areas throughout America. Together they will provide a broad, complex and poignant picture of abortion in our country. These nuanced stories have the potential to mitigate the profound stigma that surrounds abortion. Few people talk about their abortions so many will be surprised to learn that one out of four women in the US will have an abortion during their reproductive years. These narratives touch on the complex circumstances leading up to the decision to end a pregnancy, the person's ability to access healthcare, and life after having had an abortion. Most importantly, these stories have the potential to widen public understanding of abortion. We learned from the Civil Rights and Gay Rights movements that deep-seated beliefs can evolve once people give voice to their personal stories.

Learning to Go to School in Japan

"Our understanding of how the human brain performs mathematical calculations is far from complete. In *The Number Sense*, Stanislas Dehaene offers readers an enlightening exploration of the mathematical mind. Using research showing that human infants have a rudimentary number sense, Dehaene suggests that this sense is as basic as our perception of color, and that it is wired into the brain. But how then did we leap from this basic number ability to trigonometry, calculus, and beyond? Dehaene shows that it was the invention of symbolic systems of numerals that started us on the climb to higher mathematics. Tracing the history of numbers, we learn that in early times, people indicated numbers by pointing to part of their bodies, and how Roman numerals were replaced by modern numbers. On the way, we also discover many fascinating facts: for example, because Chinese names for numbers are short, Chinese people can remember up to nine or ten digits at a time, while English-speaking people can only remember seven. A fascinating look at the crossroads where numbers and neurons intersect, *The Number Sense* offers an intriguing tour of how the structure of the brain shapes our mathematical abilities, and how math can open up a window on the human mind"--Provided by publisher.

The Teaching Gap

For centuries, experts have argued that learning was about memorizing information: You're supposed to study facts, dates, and details; burn them into your memory; and then apply that knowledge at opportune times. But this approach to learning isn't nearly enough for the world that we live in today, and in *Learn Better* journalist and education researcher Ulrich Boser demonstrates that how we learn can matter just as much as what we learn. In this brilliantly researched book, Boser maps out the new science of learning, showing how simple techniques like comprehension check-ins and making material personally relatable can help people gain expertise in

dramatically better ways. He covers six key steps to help you "learn how to learn," all illuminated with fascinating stories like how Jackson Pollock developed his unique painting style and why an ancient Japanese counting device allows kids to do math at superhuman speeds. Boser's witty, engaging writing makes this book feel like a guilty pleasure, not homework. Learn Better will revolutionize the way students and society alike approach learning and makes the case that being smart is not an innate ability--learning is a skill everyone can master. With Boser as your guide, you will be able to fully capitalize on your brain's remarkable ability to gain new skills and open up a whole new world of possibilities.

Principles of Sugar Technology focuses on the principles, methodologies, and processes involved in sugar technology, including properties of sugar and agents involved in its manufacture. The selection first offers information on the chemical and physical properties of sucrose, as well as decomposition, structure of the sucrose molecule, sucrose derivatives, crystallized and amorphous sucrose, and solvents. The book then takes a look at the physical and chemical properties of reducing sugars and non-nitrogenous organic acids of sugarcane. The publication ponders on nitrogen-containing nonsugars (amino acids and proteins), complex organic

nonsugars of high molecular weight, and lipids of sugarcane. Discussions focus on the distribution of nitrogen in sugarcane, amino acids in cane juice and leaves, lignin, pectin, proteins, and significance of waxy and fatty lipids in sugar manufacture. The text also examines color and colored nonsugars, inorganic nonsugars, and agents used in sugar manufacture. The selection is a dependable reference for readers interested in sugar technology.
