### Wind Power Basics

Provides a manual to break free from enslavement to jobs, bills, and the trap of civilization, sharing advice on survival skills and sustainable living.

### Street Justice

Ren Hurst finds her way to horses as a teenager, following a turbulent and painful childhood. They are her saving grace, her first experience of pure joy and freedom. She soon becomes a passionate horsewoman, intent on riding her way to the top. Her ascent takes an unexpected turn when compassion becomes the key component to success after she discovers an entirely new paradigm regarding equine understanding and practices. This understanding leads her to walk away completely from riding and training horses and into a world where relationship is all that matters. These innovative currents of change reveal themselves to be demanding and controversial, but also exceptionally rewarding and unavoidably far-reaching into Ren's personal life. She embarks on a wild quest of radical transformation, finding an ever-deepening compassion for herself and all life around her. This book is the story of a woman's metamorphosis through her falls, rises, and life-changing insights, under the wise and benevolent guidance of a powerful animal.

## **Rewild Yourself**

The Garden Awakening is a garden design book with a difference. Drawing inspiration from long-forgotten Irish gardening traditions, Mary Reynolds re-imagines gardens as spaces that work in harmony with nature. Under Mary's gentle guidance you can awaken your garden, nurturing the land to become a beautiful natural space. The Garden Awakening provides: inspiration for garden

designs that are in harmony with nature practical ideas and guidance for creating and maintaining your garden advice on creating a spiritual space in your garden Whether you want to bring the energy and atmosphere of wild places into your own garden, are interested in permaculture and forest gardening, or want to create a spiritual space, this book will guide you in embracing the wild way.

### **Feral**

A collection of science fiction stories about human societies who have returned to a more natural lifestyle in an effort to reverse pollution that includes works by such authors as Ernest Callenbach, Robert Silverberg, and Ursula K. LeGuin

### **Better, Stronger, Faster**

Review: "Quality Lesson Plans for Outdoor Education is a flexible, easy-to-use reference that helps you deliver outdoor activities whether you are a physical educator, a youth or outdoor recreation leader, or a camp or resort leader. You will discover an abundance of ideas that can make your job easier, enrich your teaching knowledge, and broaden your current programs." "Quality Lesson Plans for Outdoor Education grounds you in the essentials of outdoor education by streamlining your preparation and paving the way for a smooth delivery of

effective outdoor instruction."--Jacket

## **Quality Lesson Plans for Outdoor Education**

To most people paying attention to the collision between industrial society and the hard limits of a finite planet, it's clear that things are going very, very wrong. We no longer have unlimited time and resources to deal with the crises that define our future, and the options are limited to the tools we have on hand right now. This book is about one very powerful option: deliberate technological regression. Technological regression isn't about 'going back,' it's about using the past as a resource to meet the needs of the present. It starts from the recognition that older technologies generally use fewer resources and cost less than modern equivalents, and it embraces the heresy of technological choice, our ability to choose or refuse the technologies pushed by corporate interests. People are already ditching smartphones in favor of 'dumb phones' and land lines and eBook sales are declining, while printed books rebound. Clear signs among many that blind faith in progress is faltering and opening up the possibility that the best way forward may well involve going back. A must-read for anyone willing to think the unthinkable and embrace the possibilities of a retro future. John Michael Greer, one of the most influential authors exploring the future of industrial society, writes the widely cited blog The Archdruid Report. He has authored more than forty books including The Long Descent and Dark Age America. He lives in Cumberland, MD, an old mill town

in the Appalachians, with his wife Sara.

### **Unlearn, Rewild**

Exploring the roots of Canadian consumer culture, *Purchasing Power* uncovers the meanings that Canadians have attached to consumer goods. Focusing on women during the early twentieth century, it reveals that for thousands of Canadians between the 1890s and World War II, consumption was about not only survival, but also civic expression. Offering a new perspective on the temperance, conservation, home economics, feminist, and co-operative movements, this book brings women's consumer interests to the fore. Due to their exclusion from formal politics and paid employment, many Canadian women turned their consumer roles into personal and social opportunities. They sought solutions in the consumer sphere to isolation, upward mobility, personal expression, and family survival. They transformed consumer culture into an arena of political engagement. Yet if Canadian women viewed consumption as a tool of empowerment, so did they wield consumption as a tool of exclusion. As *Purchasing Power* reveals, Canadian women of privileged race and class status tended to disparage racialized and lower income women's consumer habits. In so doing, they constructed notions of taste that defined who – and who did not – belong in the modern Canadian nation.

## Hicksville

Hildegard's Healing Plants is a new translation of the "Plant" section of Physica, Hildegard's classic work on health and healing. Hildegard comments on 230 plants and grains--most of which are still grown in home gardens and sold at local health food stores. Hildegard's Healing Plants is a treasure for gardeners, natural healing enthusiasts everywhere.

## Hildegard's Healing Plants

The star of the international cult sensation The Blair Witch Project shares the high points of living on a marijuana farm post- Hollywood. At age thirty-four, Heather Donahue's life went to pot. Literally. After starring in The Blair Witch Project--the tiny indie film--turned-blockbuster that Roger Ebert named one of the ten Most Influential Movies of the Century--she became a household name. But the afterglow of the movie waned, her acting career stalled, and she feared the day her epitaph would read, "Here Lies the Girl from The Blair Witch Project." Determined to start a new life, she left most remnants of the old one in the desert, meditated on things for a few days, then followed her brand-new boyfriend to her brand-new life-growing pot. Growgirl is Heather's year living in Nuggettown, California, among "The Community"--a collection of growers, their "pot wives," and the reason for it

all: "The Girls." They help one another build grow rooms, tend to their crops, and provide a glimpse into this rarely seen world that's currently the source of much intrigue and discussion. Though her relationship hits rocky territory, Heather's new life brings unexpected solace, and she's surprised to finally find normalcy in the least likely of places.

### **Tomorrow, When the War Began**

Forest School is founded on a philosophy of nature-based play and learning that encourages children to develop confidence and self-esteem. This book will get your kids outside, making and building in the real world (instead of on a computer screen!). Whether your local woodland is a forest or a strip of trees along the edge of an urban park, these activities provide fantastic opportunities for family time and will encourage your children to fall in love with outdoor play. This is the first book to share Forest School games, crafts and skill-building activities with families and friends, its magical illustrations and simple instructions drawing children easily into a world of wonder.

### **The Probiotic Planet**

Financial meltdown, a deep recession, and political polarization—combined with

strong growth outside the United States—have led to a global bubble of pessimism surrounding America’s economic prospects. Bloated with debt, and outpaced by China and other emerging markets, the United States has been left for dead as an economic force. But in this time of grim predictions, Daniel Gross, Yahoo! financial columnist and author of *Dumb Money*, offers a refreshingly optimistic take on our nation’s economic prospects, examining the positive trends that point to a better, stronger future. Widely respected for his Newsweek and Slate coverage of the crash and the recovery, Daniel Gross shows that much of the talk about decline is misplaced. In the wake of the crash, rather than accept the inevitability of a Japan-style lost decade, America’s businesses and institutions tapped into the very strengths that built the nation’s economy into a global powerhouse in the first place: speed, ingenuity, adaptability, pragmatism, entrepreneurship, and, most significant, an ability to engage with the world. As the United States wallowed in self-pity, the world continued to see promise in what America has to offer—buying exports, investing in the United States, and adopting American companies and business models as their own. Global growth, it turns out, is not a zero-sum game. *Better, Stronger, Faster* is an account of the remarkable reconstruction and reorientation that started in March 2009, a period that Gross compares to March 1933—as both marked the start of unexpected recoveries. As the U.S. public sector undertook aggressive fiscal and monetary actions, the private sector sprang into action. Companies large and small restructured, tapped into long-dormant internal resources, and invested for growth, at home and abroad. Between 2009 and 2011,

as Europe struggled with a cascade of crises, the U.S. got back on its feet—and began to run. Through stories of innovative solutions devised by policy makers, businesses, investors, and consumers, Gross explains how America has the potential to emerge from this period, not as the unrivaled ruler of the global economy but as a healthier leader and an enabler of sustainable growth.

### **Purchasing Power**

In wildlife conservation, rewilding refers to restoring habitats and creating corridors between preserved lands to allow declining populations to rebound. Marc Bekoff, one of the world's leading animal experts and activists, here applies rewilding to human attitudes. *Rewilding Our Hearts* invites readers to do the essential work of becoming reenchanting with the world, acting from the inside out, and dissolving false boundaries to truly connect with both nature and themselves.

### **Designing Fashion's Future**

The inspiration for *The Last Alaskans*—the eight-part documentary series on the Discovery Channel! Called “[one of] the greatest life-or-death-tales ever told” (*Esquire*), James Campbell’s inimitable insider account of a family’s nomadic life in the unshaped Arctic wilderness “is an icily gripping, intimate profile that stands up

well beside Krakauer's classic [Into the Wild], and it stands too, as a kind of testament to the rough beauty of improbably wild dreams" (Men's Journal). Hundreds of hardy people have tried to carve a living in the Alaskan bush, but few have succeeded as consistently as Heimo Korth. Originally from Wisconsin, Heimo traveled to the Arctic wilderness in his feverous twenties. Now, more than three decades later, Heimo lives with his wife and two daughters approximately 200 miles from civilization—a sustainable, nomadic life bounded by the migrating caribou, the dangers of swollen rivers, and by the very exigencies of daily existence. In *The Final Frontiersman*, Heimo's cousin James Campbell chronicles the Korth family's amazing experience, their adventures, and the tragedy that continues to shape their lives. With a deft voice and in spectacular, at times unimaginable detail, Campbell invites us into Heimo's heartland and home. The Korths wait patiently for a small plane to deliver their provisions, listen to distant chatter on the radio, and go sledding at 44° below zero—all the while cultivating the hard-learned survival skills that stand between them and a terrible fate. Awe-inspiring and memorable, *The Final Frontiersman* reads like a rustic version of the American Dream and reveals for the first time a life undreamed by most of us: amid encroaching environmental pressures, apart from the herd, and alone in a stunning wilderness that for now, at least, remains the final frontier.

## Letting It Go

Over the last millennia or so, as humanity has become more civilised, humankind has found itself increasingly removed from its own innate wildness. At the same time society has found itself beset with ever greater incidences of mental illness, stress, depression and antisocial behaviour. In *Rewild Yourself: Becoming Nature* Rachel Corby addresses the longing search for meaning, what she calls the dark cries of the soul, that have emerged alongside the human-nature disconnect. Rachel writes with a passion and a deep love for the wild. In developing ones senses and natural instincts she invites you to join her in finding ways to redress the balance. She encourages you to find the wild place inside and overcome a little of your own domestication, to rebuild connections and communications with nature allowing for a free-flow between the wildness of the world and your wild heart. Considering many aspects of our modern lives, this book offers a path which leads to a personal and cultural transformation; a future where there is space for the wild to grow.

### **Play the Forest School Way**

A Holocaust survivor struggles to let go of the past Miriam Katin has the light hand of a master storyteller in this flowing, expressive, full-color masterpiece. A Holocaust survivor and mother, Katin's world is turned upside down by the news that her adult son is moving to Berlin, a city she's villainized for the past forty years. As she struggles to accept her son's decision, she visits the city twice, first

to see her son and then to attend a museum gala featuring her own artwork. What she witnesses firsthand is a city coming to terms with its traumatic past, much as Katin is herself. *Letting It Go* is a deft and careful balance: wry, self-deprecating anecdotes counterpoint a serious account of the myriad ways trauma inflects daily existence, both for survivors and for their families. Katin's first book, *We Are On Our Own*, was a memoir of her childhood, detailing how she and her mother hid in the Hungarian countryside, disguising themselves as a peasant woman and her illegitimate child in order to escape the Nazis. The stunning story, along with Katin's gorgeous pencil work, immediately garnered acclaim in the comics world and beyond. With *Letting It Go*, Katin's storytelling and artistic skills allow her to explore a voice and perspective like no other found in the medium.

## **Primitive Technology**

Resistance is fertile – bioremediation techniques to heal the earth. Millions of acres of land have been contaminated by pesticides, improperly handled chemicals, dirty energy projects, toxic waste, and other pollutants in the United States and Canada. This toxic legacy impacts the environment, our health, our watersheds, and land that could otherwise be used to grow healthy local food and medicines.

Conventional clean-up techniques employed by government and industry are tremendously expensive and resource-intensive and can cause further damage. More and more communities find themselves increasingly unable to rely on those

companies and governments who created the problems to step in and provide solutions. Earth Repair describes a host of powerful grassroots bioremediation techniques, including: Microbial remediation-using microorganisms to break down and bind contaminants Phytoremediation-using plants to extract, bind, and transform toxins Mycoremediation-using fungi to clean up contaminated soil and water. Packed with valuable, firsthand information from visionaries in the field, Earth Repair empowers communities and individuals to take action and heal contaminated and damaged land. Encompassing everything from remediating and regenerating abandoned city lots for urban farmers and gardeners, to recovering from environmental disasters and industrial catastrophes such as oil spills and nuclear fallout, this fertile toolbox is essential reading for anyone who wishes to transform environmental despair into constructive action.

### **Caves of Power**

Interwoven with short essays on the lessons of the fungi, Radial Mycology begins with chapters that explore the uniqueness of fungal biology, the critical ecological roles of micro and macro fungi, how to accurately identify mushrooms and mycorrhizal fungi, the importance of lichens as medicines and indicators of environmental quality, and the profound influences that fungi have held on the evolution of all life and human cultures. With this foundation laid, the reader is then equipped to work with the fungi directly. Techniques for making potent fungal

medicines, growing fermenting fungi for food, and cheaply cultivating mushrooms using recycled tools (and yet still achieving lab-quality results) are explored in-depth. Subsequent chapters grow far beyond the limits of other books on mushrooms. Detailed information on the principles and practices of natural mushroom farming--largely influenced by the design system of permaculture--is presented along with extensive information on cultivating mycorrhizal fungi and the science of mycoremediation, the application of fungi to mitigate pollution in the environment and in our homes. The book ends with deeper insights into the social effects that fungi present from the reflection of mycelial networks in the design of whole societies to a rigorous examination of the history of psychoactive fungi. Written for the beginner as well as the experienced mycologist, *Radical Mycology* is an invaluable reference book for anyone interested in Do-It-Yourself (or Do-It-Together) homesteading, community organizing, food security, natural medicine, grassroots bioremediation, and the evolution of human-fungal-ecological relations. More than a book on mushrooms, *Radical Mycology* is a call to ally with the fungi in all efforts to spawn a healthier world. Heavily referenced and vibrantly illustrated by the author, this unprecedented book will undoubtedly remain a classic for generations to come.

### **Amazing Rare Things**

A few weeks after the planes crashed into the World Trade Centre on 9/11, LA

Times journalist Megan Stack was thrust into Afghanistan and Pakistan, dodging gunmen and prodding warlords for information. She then travelled to other war ravaged countries of the Middle East including Israel and Libya, witnessing and telling the stories of the changing Muslim world. Stack relates her initial wild excitement and her slow disillusionment as the cost of violence outweighs the elusive promise of freedom and democracy. She reports from under bombardment in Lebanon; records the raw pain of suicide bombings in Israel; and one by one, marks the deaths and disappearance of those she interviews. *Every Man in This Village is a Liar* is a deeply human memoir about the wars of the twenty first century. Beautiful, savage and unsettling, it is an indispensable book of our times.

### **ReWild**

As an investigative journalist, Monbiot found a mission in his ecological boredom, that of learning what it might take to impose a greater state of harmony between himself and nature. He was not one to romanticize undisturbed, primal landscapes, but rather in his attempts to satisfy his cravings for a richer, more authentic life, he came stumbled into the world of restoration and rewilding. When these concepts were first introduced in 2011, very recently, they focused on releasing captive animals into the wild. Soon the definition expanded to describe the reintroduction of animal and plant species to habitats from which they had been excised. Some people began using it to mean the rehabilitation not just of particular species, but

of entire ecosystems: a restoration of wilderness. Rewilding recognizes that nature consists not just of a collection of species but also of their ever-shifting relationships with each other and with the physical environment. Ecologists have shown how the dynamics within communities are affected by even the seemingly minor changes in species assemblages. Predators and large herbivores have transformed entire landscapes, from the nature of the soil to the flow of rivers, the chemistry of the oceans, and the composition of the atmosphere. The complexity of earth systems is seemingly boundless."

### **Radical Mycology**

The author helps readers train their brains to think more creatively and positively--especially in the face of setbacks.acks.

### **Surviving the Apocalypse in the Suburbs**

The personal life story of the former Golden Gloves boxer and actor describes his coming of age on the streets of New York, presidency of the Hell's Angels, experiences as a celebrity bodyguard, and television career. Reprint. 35,000 first printing.

## **The Final Frontiersman**

Describes the methods by which selected European artists, from Leonardo Da Vinci to Mark Catesby, portrayed the natural world during the Age of Discovery.

## **The Garden Awakening**

Americans are expressing deep concern about US dependence on petroleum, rising energy prices and the threat of climate change. Unlike the energy crisis of the 1970s, however, there is a lurking fear that, now, the times are different and the crisis may not easily be resolved. The Long Descent examines the basis of such fear through three core themes: Industrial society is following the same well-worn path that has led other civilizations into decline, a path involving a much slower and more complex transformation than the sudden catastrophes imagined by so many social critics today. The roots of the crisis lie in the cultural stories that shape the way we understand the world. Since problems cannot be solved with the same thinking that created them, these ways of thinking need to be replaced with others better suited to the needs of our time. It is too late for massive programs for top-down change; the change must come from individuals. Hope exists in actions that range from taking up a handicraft or adopting an "obsolete" technology, through planting an organic vegetable garden, taking charge of your own health

care or spirituality, and building community. Focusing eloquently on constructive adaptation to massive change, this book will have wide appeal.

### **Rewild Yourself**

"[Here], Sergio Magaña unveils this almost lost and secret knowledge of the ancient Mexicans. He shares practices for healing, rejuvenation, manifestation and enlightenment, [that includes] Toltec numerology, astral surgey, dream work and Quetzalcóatl "rising of the serpent" practices."--Back cover.

### **Thriving Beyond Sustainability**

Assesses a promising new approach to restoring the health of our bodies and our planet Most of us are familiar with probiotics added to milk or yogurt to improve gastrointestinal health. In fact, the term refers to any intervention in which life is used to manage life—from the microscopic, like consuming fermented food to improve gut health, to macro approaches such as biological pest control and natural flood management. In this ambitious and original work, Jamie Lorimer offers a sweeping overview of diverse probiotic approaches and an insightful critique of their promise and limitations. During our current epoch—the Anthropocene—human activity has been the dominant influence on climate and

the environment, leading to the loss of ecological abundance, diversity, and functionality. Lorimer describes cases in which scientists and managers are working with biological processes to improve human, environmental, and even planetary health, pursuing strategies that stand in contrast to the “antibiotic approach”: Big Pharma, extreme hygiene, and industrial agriculture. The Probiotic Planet focuses on two forms of “rewilding” occurring on vastly different scales. The first is the use of keystone species like wolves and beavers as part of landscape restoration. The second is the introduction of hookworms into human hosts to treat autoimmune disorders. In both cases, the goal is to improve environmental health, whether the environment being managed is planetary or human. Lorimer argues that, all too often, such interventions are viewed in isolation, and he calls for a rethinking of artificial barriers between science and policy. He also describes the stark and unequal geographies of the use of probiotic approaches and examines why these patterns exist. The author’s preface provides a thoughtful discussion of the COVID-19 pandemic as it relates to the probiotic approach. Informed by deep engagement with microbiology, immunology, ecology, and conservation biology as well as food, agriculture, and waste management, The Probiotic Planet offers nothing less than a new paradigm for collaboration between the policy realm and the natural sciences.

## **Children in the Anthropocene**

Provides information on ways to create a sustainable lifestyle in the suburbs, covering such topics as growing food, keeping livestock, electricity, waste disposal, health care, entertainment, education, and networking.

### **The Long Descent**

When Ellie and six of her friends return home from a camping trip deep in the bush, they find things hideously wrong -- their families gone, houses empty and abandoned, pets and stock dead. Gradually they begin to comprehend that their country has been invaded and everyone in the town has been taken prisoner. As the horrible reality of the situation becomes evident they have to make a life-and-death decision: to run back into the bush and hide, to give themselves up to be with their families, or to stay and try to fight. This reveting, tautly-drawn novel seems at times to be only a step away from today's headlines.

### **Every Man in This Village Is a Liar**

For those readers who want to get closer to the nature all around them and bring it back into focus within their lives, this book is the ideal companion. We're not just losing the wild world. We're forgetting it. We're no longer noticing it. We've lost the habit of looking and seeing and listening and hearing. But we can make hidden

things visible, and this book features numerous spellbinding ways to bring the magic of nature much closer to home. Mammals you never knew existed will enter your world. Birds hidden in treetops will shed their cloak of anonymity. With a single movement of your hand you can make reptiles appear before you. Butterflies you never saw before will bring joy to every sunny day. Creatures of the darkness will enter your consciousness. And as you take on new techniques and a little new equipment, you will discover new creatures and, with them, new areas of yourself that had gone dormant. Once put to use, they wake up and start working again. You become wilder in your mind and in your heart. Once you know the tricks, the wild world begins to appear before you.

### **The Resilience Imperative**

Permaculture is more than just the latest buzzword; it offers positive solutions for many of the environmental and social challenges confronting us. And nowhere are those remedies more needed and desired than in our cities. The Permaculture City provides a new way of thinking about urban living, with practical examples for creating abundant food, energy security, close-knit communities, local and meaningful livelihoods, and sustainable policies in our cities and towns. The same nature-based approach that works so beautifully for growing food—connecting the pieces of the landscape together in harmonious ways—applies perfectly to many of our other needs. Toby Hemenway, one of the leading practitioners and teachers of

permaculture design, illuminates a new way forward through examples of edge-pushing innovations, along with a deeply holistic conceptual framework for our cities, towns, and suburbs. The Permaculture City begins in the garden but takes what we have learned there and applies it to a much broader range of human experience; we're not just gardening plants but people, neighborhoods, and even cultures. Hemenway lays out how permaculture design can help town dwellers solve the challenges of meeting our needs for food, water, shelter, energy, community, and livelihood in sustainable, resilient ways. Readers will find new information on designing the urban home garden and strategies for gardening in community, rethinking our water and energy systems, learning the difference between a "job" and a "livelihood," and the importance of placemaking and an empowered community. This important book documents the rise of a new sophistication, depth, and diversity in the approaches and thinking of permaculture designers and practitioners. Understanding nature can do more than improve how we grow, make, or consume things; it can also teach us how to cooperate, make decisions, and arrive at good solutions.

### **Rewild Or Die**

Turning challenge into opportunity--a survey of successful sustainable ideas and practices from around the world.

## **Riding on the Power of Others**

"Primitive Technology: A Boiok of earth Skills is a sharing of ideas - the philosophies, the history, and the personal stories by the authorities on primitive technology from the pages of The Bulletin of Primitive Technology. Included are instructions for creating fire and tools of wood, stone, and bone, as well as fiber adhesives, projectiles, art, and music."--Back cover.

## **The Retro Future**

As our busy, technology-driven lives become more sedentary and less connected to wildlife, it is important to remember the natural, human connection we have to the wilderness. Nick Baker, naturalist and wildlife presenter, takes the reader back to our natural instincts. Journeying through the senses, his expert advice offers the practical tools to experience the wilderness on your own doorstep as well as in the wider, wilder world. From learning to observe the creatures and beasts within hands' reach and seeing and hearing the birds and trees of our forests, to an introduction to rewilding as a concept and the importance nature has to the wider world. Nick's vivid text mixes memoir with practical advice to entertain, inform and inspire us to get back to nature. ReWild is a beautiful and important exploration of the art of returning to nature.

## **Rewilding Our Hearts**

How do fashion designers design? How does design function within the industry? How can design practices open up sustainable pathways for fashion's future? Designing Fashion's Future responds to these questions to offer a fresh understanding of design practices within the sprawling, shifting fashion system. Fashion design is typically viewed as the rarefied practice of elite professionals, or else as a single stage within the apparel value chain. Alice Payne shows how design needn't be reduced to a set of decisions by a designer or design team, but can instead be examined as a process, object, or agent that shapes fashion's material and symbolic worlds. Designing Fashion's Future draws on more than 50 interviews with industry professionals based in Australia, Asia, North America, Europe, and the United Kingdom. These diverse perspectives from multinational retailers, independent and experimental contexts ground the discussion in contemporary industry practices.

## **Future Primitive**

A manual for opening the doors of perception and directly engaging the intelligence of the Natural World • Provides exercises to directly perceive and interact with the complex, living, self-organizing being that is Gaia • Reveals that

every life form on Earth is highly intelligent and communicative • Examines the ecological function of invasive plants, bacterial resistance to antibiotics, psychotropic plants and fungi, and the human species In *Plant Intelligence and the Imaginal Realm*, Stephen Harrod Buhner reveals that all life forms on Earth possess intelligence, language, a sense of I and not I, and the capacity to dream. He shows that by consciously opening the doors of perception, we can reconnect with the living intelligences in Nature as kindred beings, become again wild scientists, nondomesticated explorers of a Gaian world just as Goethe, Barbara McClintock, James Lovelock, and others have done. For as Einstein commented, “We cannot solve the problems facing us by using the same kind of thinking that created them.” Buhner explains how to use analogical thinking and imaginal perception to directly experience the inherent meanings that flow through the world, that are expressed from each living form that surrounds us, and to directly initiate communication in return. He delves deeply into the ecological function of invasive plants, bacterial resistance to antibiotics, psychotropic plants and fungi, and, most importantly, the human species itself. He shows that human beings are not a plague on the planet, they have a specific ecological function as important to Gaia as that of plants and bacteria. Buhner shows that the capacity for depth connection and meaning-filled communication with the living world is inherent in every human being. It is as natural as breathing, as the beating of our own hearts, as our own desire for intimacy and love. We can change how we think and in so doing begin to address the difficulties of our times.

## **Rewild Yourself**

Offers an introduction to wind energy, describes the different types of systems that can be used to convert the natural resource into electricity, and explains how important components in the system work.

## **Growgirl**

Hidden in a quiet corner of New Zealand's East Cape is a town where the beach is sunny, the tea is hot, the locals are friendly, and everyone loves comics. This internationally acclaimed New Zealand graphic novel is a wryly funny story about the dangerous business of art and a haunting meditation on longing and regret, on getting lost and finding your way home. With a new introduction by the author. First New Zealand edition.

## **The Permaculture City**

We're not just losing the wild world. We're forgetting it. We're no longer noticing it. We've lost the habit of looking and seeing and listening and hearing. But we can make hidden things visible, and this book features 23 spellbinding ways to bring the magic of nature much closer to home. Mammals you never knew existed will

enter your world. Birds hidden in treetops will shed their cloak of anonymity. With a single movement of your hand you can make reptiles appear before you. Butterflies you never saw before will bring joy to every sunny day. Creatures of the darkness will enter your consciousness. And as you take on new techniques and a little new equipment, you will discover new creatures and, with them, new areas of yourself that had gone dormant. Once put to use, they wake up and start working again. You become wilder in your mind and in your heart. Once you know the tricks, the wild world begins to appear before you. For anyone who wants to get closer to the nature all around them and bring it back into focus, this is the perfect read.

### **Plant Intelligence and the Imaginal Realm**

Argues that the economy can only be improved through major changes that will make it more decentralized and cooperative, including such novel ideas as energy self-sufficiency, interest-free financing, affordable housing, local food systems and more. Original.

### **Everything Is Figureoutable**

This book elaborates the need, in a rapidly urbanizing world, for recognition of the

ecological communities we inhabit in cities and for the development of an ethics for all entities (human and non-human) in this context. Children and their entangled relations with the human and more-than-human world are located centrally to the research on cities in Bolivia and Kazakhstan, which investigates the future challenges of the Anthropocene. The author explores these relations by employing techniques of intra-action, diffraction and onto-ethnography in order to reveal the complexities of children's lives. These tools are supported by a theoretical framing that draws on posthumanist and new materialist literature. Through rich and complex stories of space-time-mattering in cities, this work connects children's voices with a host of others to address the question of what it means to be a child in the Anthropocene.

### **Earth Repair**

Rewild or Die is a collection of essays written by Urban Scout exploring the philosophy of the emerging rewilding renaissance, in which civilized humans are thought to be "domesticated" through thousands of years of sedentary, agrarian life. This way of life is believed to be the root of all environmental destruction and social injustice. Rewilding is the process of un-doing this domestication, and restoring healthy, biologically diverse communities. Using thoughtful, humorously cynical and at times angry prose, Urban Scout explores how the ideology of civilization clashes with the wild and wild peoples, and how thinking, feeling and

most importantly living wild is the only way to reach true sustainability.
