## **Africa: Continent of Economic Opportunity**

The venture capital and private equity industries are among the most characteristic and visible segments of today's global economy. As we approach the midpoint of the first decade of the 21st century, these industries have clearly matured and left behind the much-publicized excesses of the 1990s. It is now incumbent upon practitioners to thoroughly understand the legal structure of venture capital transactions, not only in their own country but also due to the typically cross-border nature of such transactions in numerous jurisdictions worldwide. This very useful book has been prepared under the auspices of the International Association of Young Lawyers (AIJA) following a working session held in Edinburgh in August 2003. It provides practitioners with the first overview of the legal requirements attached to venture capital transactions in a variety of jurisdictions, encompassing both developed and developing nations. An introductory chapter presents a global view, addressing venture capital issues that tend to arise under any legal circumstances. Then, for each of twelve countries, an experienced practitioner in the venture capital field offers detailed discussions of his or her country's legal system as it pertains to the protection of investors' rights and company's

investments, regulatory issues, and enforcement. Specific topics discussed where applicable for each country include: documentation; due diligence; valuation standards; representations and warranties; intellectual property; compensation of key personnel; disclosure; exit strategy; corporate governance roles; tax issues; securities law requirements; restrictions on foreign direct investment; and availability of court orders. Global Venture Capital Transactions goes a long way to fulfilling the need of practitioners and entrepreneurs to structure cross-border venture capital transactions that are not only initially successful but enjoy continued profitability with the strength to overcome inevitable obstacles. It will be warmly welcomed by the venture capital and private equity community throughout the world.

Venture Capital is a marriage between 'people with money and no ideas' and 'people with ideas and no money'. It is a high-risk investment vehicle with the potential for manifold returns and the possibility of a complete investment written-off. Although it is essentially private money and smaller in size than traditional financing pillars, its impact has been phenomenal, even to the extent of transforming the way we live in the modern world. Yet the fact remains that the business of venture capital is not fully understood by startup founders and fund managers are also not familiar with the inner workings of other venture funds. And, as more public or tax-players'

money flows into this asset class, it begs a shift from the existing esoteric styles to more transparent and predictable operations. It would also be beneficial if the craft of venture capital is well understood by the business community and most importantly, policymakers as Demystifying Venture Capital: How it works and How to get primarily written to address these concerns, and to explain the subject in a nontechnical manner, as far as possible. A handbook for fund managers, startups, academicians interested in the subject, policy makers, and aspiring entrepreneurs, this book is unique as it has been written along with the top 25 venture funds in India as co-authors. The first part builds the concepts and theoretical framework of venture investing throughout the venture capital life cycle, giving readers a robust academic backdrop while the second part offer 25 first-hand accounts of how VCs invest, where they invest, what they look for while investing, providing invaluable insights into the minds and methods of VCs. All in all, this prototype is a first-of-its-kind endeavour to deliver a 360-degree + view of the Venture Capital universe.

abound. The risks of inflation, the volatility of interest rates, the deregulation of financial intermediaries and the unbundling of financial services have combined to present investment managers with challenges and opportunities far greater than in the past. For trustees and managers of pension, trust, endowment, and similar funds, the task of meeting the challenges and exploiting the opportunities is much more difficult. These fiduciaries must measure their investment decisions against constrained interpretations of a legal standard--the prudent man rule--that have caused it to lag far behind changes in investment theory and the marketplace. Drawing on financial history, a major opinion survey of institutional investors, and comprehensive reviews of the law and of the lessons of modern portfolio theory for prudence, this book presents a powerful case that the prudent man rule as elaborated in legal treatises and much of the case law would virtually compel a fiduciary to act imprudently in terms of financial theory and marketplace reality. In proposing a modern paradigm of investment prudence, the book uses illustrations drawn from such traditionally suspect categories of investment fiduciaries as securities lending, real estate, venture capital, options and futures and repurchaser agreements. An unusual examination of the interaction of the worlds of law and finance, this work will be of interest to fiduciaries who are subject to some form of prudent man rule and all others, including judges, lawyers and investment managers, who are called upon to interpret and apply that legal standard.

In this report the European Union Committee warn that unless the Directive on alternative investment funds is compatible with a global regulatory approach it will seriously damage the EU and UK economies. The UK Government should not agree with the Directive unless it is compatible with equivalent legislation in third countries and in particular the United States. It is essential to ensure that EU alternative investment fund managers do not lose competitiveness at a global level. This is a particular concern for the UK and the City of London which has a large alternative investment fund industry that employed an estimated 40,000 people in 2009. The Committee recognise the risk the aggregate activity of hedge funds could cause to financial stability and welcome the principle of EU regulation of the managers. The Directive has the potential to reduce risk posed by fund managers and be beneficial to the single market and the EU economy as a whole. The Committee stress that the requirements on provision of information should be proportionate and carefully thought out to ensure Supervisors are provided with the relevant data. The Committee also criticise the "one size fits all" approach of the Directive. The Directive covers a wide variety of fund managers including hedge funds, private equity and infrastructure funds, and its detailed requirements

This book studies diverse categories of venture capital (VC) firms in India based on their ownership type (domestic vs foreign), stage of investment (early vs growth stage) and VC investment team composition (entrepreneurial experience vs investing experience). For each category of VC firms, the nuances in their investment, portfolio involvement and exit strategies are separately analysed. Employing the framework of information asymmetry, the book studies how different categories of VC firms rely on distinct mechanisms such as deal syndication and domain specialization to address the ensuing adverse selection and agency risks. It also delves into the macro context by assessing whether the emergence of VC in India has been driven by 'pull' or 'push' factors. This is accomplished by analysing in depth the supply and demand of VC funds. Finally, it critically reviews the existing policies of entrepreneurial finance and arrives at recommendations for future directions of the same.

The European Alternative Investment Fund Managers Directive (AIFMD) has been formulated as a response to the global financial crisis, which climaxed in the collapse of Lehman Brothers on 15 September 2008. The securitisation of real estate risks that came about by launching financial innovations such as asset-backed securities (ABS), mortgage-backed securities (MBS), collateralised debt obligations (CDO) or structured investment vehicles (SIV) contributed particularly to the fast worldwide circulation of 'poisoned' papers. Assuming that the financial crisis of 2008/2009 was the consequence of wrongfully set incentives that primarily concerned the fund managers' remuneration, the European Commission followed the ideas of Jacques de Larosière, Klaus-Heiner Lehne and Poul Nyrup Rasmussen and set the legal focus on the fund managers, as these entities

launch and distribute financial products such as those mentioned above and also decide on the investment strategy that might bear systemic risks. Due to their financial market potential and in view of the design of financial products, these entities admittedly have a strong impact on the financial market development and may jointly be responsible for the realisation of systemic risks of transnational dimensions. In particular, in the view of a steady credit supply of the real economy, the enormous transnational mobility of capital and the global competition of financial market regulations, it seems doubtful whether one can identify the fund managers as those responsible for the financial market crisis of 2008/2009. This thesis highlights the history, symptoms and supposed core reasons of the financial crisis of 2008/2009 and critically assesses whether the AIFMD can reach its objective to effectively contain systemic risks in the context of a globalised financial system.

far beyond the typical and often-simplistic recipe to 'go for top quartile funds'. Beyond the J Curve provides the answers to key questions, including: Why 'top-quartile' promises should be taken with a huge pinch of salt and what it takes to select superior fund managers? What do limited partners need to consider when designing and managing portfolios?
