Cars & Parts

Shows the reader how to set up, operate, maintain and repair home and industrial video equipment. In addition, it also covers the skills necessary for writing, directing, taping and editing TV productions.

Take One

Updated to cover the latest iLife features and enhancements, including the new GarageBand application
Seven minibooks on iTunes, iPhoto, iMovie, iDVD, GarageBand, iPod, and iLife Extras get readers quickly up to speed with all of Apple's digital media applications
Covers the key features of each application, including ripping songs and working with a playlist (iTunes), editing and saving digital photo files (iPhoto), assembling picture and video clips into a home movie (iMovie), creating DVD slide shows and movies (iDVD), and setting up and recording in a digital music studio (GarageBand), plus bonus coverage of Apple's market-leading iPod

Mergent Industrial Manual

Red Prometheus

Volume II of the manual that has been absolutely indispensable to the ship's engineer for over forty years was completely updated by a team of practicing marine engineers in 1991. Chapters on obsolete equipment were deleted; those on systems that are still current were updated; and new chapters were written to cover the innovations in materials, machines, and operating practices that evolved recently.

Airman's Information Manual

The International Film & TV Production Directory & Guide for professional Motion Picture, Broadcast-TV, Feature Films, Commercials, Cable/Satellite, Digital and Videotape Industries. It covers the latest annual updates in production and logistic information for all major production centers in the United States (all states), Canada (all provinces), the United Kingdom, the Caribbean Islands, Mexico, Europe, Israel, Jordan, Australia (all states), New Zealand, Morocco, South Africa, India, Japan, South America the Far East, and many more. Edited for those responsible for film & videotape productions, and for the purchasing of production equipment and services. Contains comprehensive compilation of production information, featuring 8 major sections: (1) Professional Information: Production Contracts, Insurance, Completion Bonds, Copyright Registration, Distribution, The Rating System, Location Scouting & Management, Use of Firearms Regulations, Use of Animal Guidelines, Weather Forecasting, etc.; (2) Financial Information: Financing Sources, Production Packaging, Licensing & Merchandising Rights, Distribution Methods, etc.; (3) Production Information: Location Logistics, Shooting-Permit requirements, Government Filming Regulations, etc (4) Union & Guilds Agreements: Latest & updated contracts, wage scales & working conditions, for all craft classifications; (5) Commercials, Videotape & Music Productions: AICP, AICE, ITS & AMP Music standard working guidelines, covering Production Budget Forms and Bidding Procedures with advertising agencies; (6) Major International Festivals

& Awards: Entry Regulations, Competition Procedures, Nomination Categories, etc., covering all major international events (Oscar, Emmy, Cannes, Clio, etc.); (7) Major International Markets: AFM (American Film Market), Cannes Market, MIFED, NATPE, MIP-TV, and NAB; (8) Classified Production Directory: Over 30,000 listings of Production Companies, Services & Professionals, in more than 200 classified categories.

iLife '04 All-in-One Desk Reference For Dummies

By helping students develop an intuitive understanding of the subject, Microelectronics teaches them to think like engineers. The second edition of Razavi's Microelectronics retains its hallmark emphasis on analysis by inspection and building students' design intuition, and it incorporates a host of new pedagogical features that make it easier to teach and learn from, including: application sidebars, self-check problems with answers, simulation problems with SPICE and MULTISIM, and an expanded problem set that is organized by degree of difficulty and more clearly associated with specific chapter sections.

F&S Index Europe Annual

Program Operations Manual System

This analysis of the relationship between science and totalitarian rule in one of the most technically advanced countries in the East bloc examines professional autonomy under dictatorship and the place of technology in Communist ideology. In Cold War-era East Germany, the German tradition of science-based technology merged with a socialist system that made technological progress central to its ideology. Technology became an important part of East German socialist identity--crucial to how Communists saw their system and how citizens saw their state. In *Red Prometheus*, Dolores Augustine examines the relationship between a dictatorial system and the scientific and engineering communities in East Germany from the end of the Second World War through the 1980s. Drawing on newly opened archives and extensive interviews, Augustine looks in detail at individual scientists' interactions with the East German system, examining the effectiveness of their resistance against the party's totalitarian impulses. She explains why many German scientists and engineers who were deported to the Soviet Union after World War II returned to East Germany rather than defecting to the capitalist West, traces scientists' attempts to hold on to some aspects of professional autonomy, and describes challenges to their professional identity on the factory floor. Augustine examines the quality of science and technology produced under Communist rule, looking at failed research projects and clashing cultures of innovation. She looks at technological myth-building in science fiction and propaganda. She explores individual career strategies, including the role played by gender in high-tech professions, and the ways that both enterprises and individuals

responded to increasing state and party control of research during the 1980s. We cannot understand the economic choices made by East Germany, Augustine argues, unless we understand the cultural values reflected in the East German belief in technology as indispensable to progress and industrial development.

Modern Marine Engineer's Manual

This second edition of the bestselling Manual of Industrial Microbiology and Biotechnology brings together in one place the biological and engineering methodologies required to develop a successful industrial process, from culture isolation and development to useful product. The editors have enlisted a broad range of experts, including microbial ecologists, physiologists, geneticists, biochemists, molecular biologists, and biochemical engineers. This comprehensive perspective provides a valuable "how to" resource, the structure of which resembles the sequence of operations involved in the development of a commercial biological process and product.

Modern Marine Engineer's Manual

This manual, first published in 1943, has been indispensable to ships engineers for generations. The third edition, revised and updated by a team of marine engineers/professors, follows in the venerable style of its predecessors. Text relating to obsolete equipment has been eliminated, information on systems that are still current has been updated, and new material has been added to reflect innovations in equipment and operative practices. Extensive coverage on the newest medium-speed diesel engine has been added to the text. Environmental concerns have been recognized with a section on engine exhaust emissions and information about new refrigerants and the maintenance of refrigeration systems. New equipment for trash handling, sewage processing, bilge water discharge, and incineration are discussed with reference to international regulations. Ship trial procedures and the new equipment used in trial data collection are presented in detail.
